**Notice of Intent**

**Sundry ID:** 2707661

**Type of Submission:** Notice of Intent

**Type of Action:** Drilling Operations

**Date Sundry Submitted:** 12/15/2022

**Time Sundry Submitted:** 11:20

**Date proposed operation will begin:** 10/19/2022

**Procedure Description:** Verbal approval given on 10/18/22 by Zota Stevens. Procedure Description: Centennial Resource Prod, LLC would like to request approval for an open hole sidetrack. We tripped out of hole on H&P 652 for low rop, at surface we discovered the bit pin had broke off leaving the bit on bottom. The sidetrack depth will be 13,205' MD. Below is the procedure and attached is the WBD and well plan. Please let us know if you need additional information for this approval. Start with full stand of pipe available. Mark pipe with 1" marks exactly. Orient tool face at planned GTF (-160-170 ). Work pipe with TF oriented for 3-4 hours or until the toolface does not move while slacking off a full 30' ( Start off with 30' trough then concentrate on 15') DO NOT GO below your kick-off point mark. Chain brake down with tool face at desired toolface Set a clock or timer and begin time drilling procedures. If you have to pick up for any reason, start at least 1" high and redrill that inch. Never go past bottom even 1/2" or you will destroy your ledge and have to start time drilling all over from the beginning. • Orient TF to Plan & trough 30' 3-4 hours or until toolface doesn't move • First 5' @ 1.0 FPH - 5 min/in. • 5-10' @ 1.25 FPH - 4 min/in. • 10-15' @ 1.67 FPH - 3min/in. • 15-20' @ 2.5 FPH - 2min/in. • 20-25' @ 5 FPH or controlled ROP - Once 25' has been time drilled or 100% formation, good differential, and all involved has been contacted and agreed. Slowly begin to increase ROP. Be sure to watch all drilling parameters during the sidetrack operation. If a decrease in WOB or Diff occurs we will need to speak with all parties concerned.

**Surface Disturbance**

**Is any additional surface disturbance proposed?:** No
