RE: VPR D-303, D-304 and D-308

To whom it may concern,

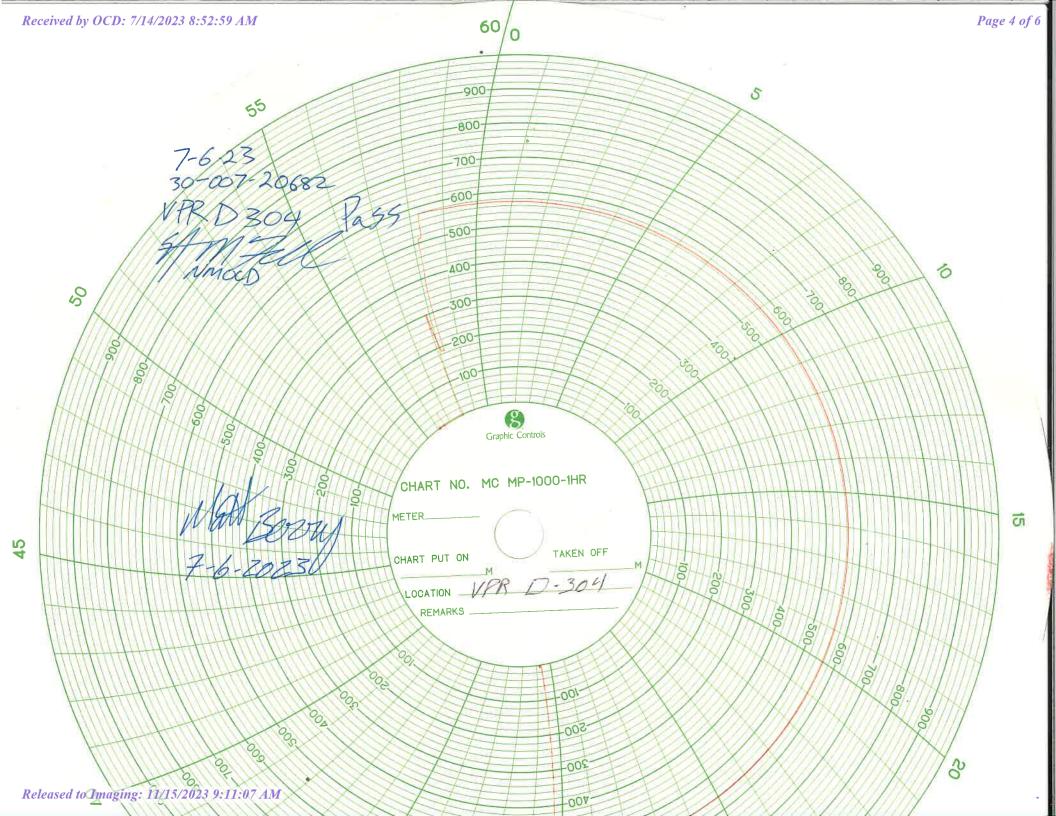

Wapiti Operating recently had three wells fail MIT's as required by the state. The wells are the VPR D-303 (API: 30-007-20681), VPR D-304 (API: 30-007-20682), and VPR D-308 (API: 30-007-20686). The tests were conducted when temperatures were extremely cold and had a very small leakoff. Since that time, we have retorqued the wellheads and are ready to have the state witness the new tests. The date given was April 13th for the new tests, which is coming up quickly. These wells were originally permitted as horizontal wells and direct offsets to existing wells. Over the years, Wapiti has produced various horizontal wells in the area, and the reserves have been quite attractive, especially at higher price environments. These wells all have 9-5/8" surface casing set and are awaiting the time to drill when economics make the most sense. Recently Wapiti has purchased a rig that can drill these wells and will make the economics considerably better by doing it all in house. Production casing has been purchased and is inventory as well. Wapiti had a plan and was ready to pursue these wells once the MIT's passed. The timing could not have been worse with prices going from over \$8/mmbtu to current spot prices at or below \$2/mmbtu. This has not put an end to the project but has delayed it waiting for a more favorable pricing environment. We look forward to successful MIT tests to satisfy the state requirements and putting a plan of development together that we can execute when the timing is more favorable for economic justification.

Respectfully,

Ed Skrljac Wapiti Energy O: (713) 365-8506 C: (281) 635-0215 eskrljac@wapitienergy.com
