Note: No allowable will be assigned to this completion until all interests have been consolidated or a non-standard unit has been approved by the division. **Released to Imaging:** 10/12/2024 3:08:20 PM

#### Received by OCD: 10/1/2024 3:19:09 PM

This grid represents a standard section. You may superimpose a non-standard section, or larger area, over this grid. Operators must outline the dedicated acreage in a red box, clearly show the well surface location and bottom hole location, if it is directionally drilled, with the dimensions from the section lines in the cardinal directions. If this is a horizontal wellbore show on this plat the location of the First Take Point and Last Take Point, and the point within the Completed interval (other than the First Take Point or Last Take Point) that is closest to any outer boundary of the tract.

Surveyors shall use the latest United States government survey or dependent resurvey. Well locations will be in reference to the New Mexico Principal Meridian. If the land is not surveyed, contact the OCD Engineering Bureau. Independent subdivision surveys will not be acceptable.

#### <u>Section 3 - Certifications</u> <u>Effective May 25, 2021</u>

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal:

 $\mathbf{X}$  Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system; or

 $\Box$  Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system. *If Operator checks this box, Operator will select one of the following:* 

Well Shut-In.  $\Box$  Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or

**Venting and Flaring Plan.**  $\Box$  Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including:

- (a) power generation on lease;
- (b) power generation for grid;
- (c) compression on lease;
- (d) liquids removal on lease;
- (e) reinjection for underground storage;
- (f) reinjection for temporary storage;
- (g) reinjection for enhanced oil recovery;
- (h) fuel cell production; and
- (i) other alternative beneficial uses approved by the division.

#### Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

(a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or

(b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture requirement.

2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

Page 8

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

#### Permian Resources Operating, LLC (372165)

#### **Natural Gas Management Plan Descriptions**

#### VI. Separation Equipment:

Permian Resources Operating, LLC (Permian) utilizes a production forecast from our Reservoir Engineering team to appropriately size each permanent, 3-phase separator and heater treater utilized for production operations. Our goal is to maintain 5 minutes of retention time in the test vessel and 20 minutes in the heater treater at peak production rates. The gas produced is routed from the separator to the gas sales line.

#### VII. Operational Practices:

#### Drilling

During Permian's drilling operations it is uncommon for venting or flaring to occur. If flaring is needed due to safety concerns, gas will be routed to a flare and volumes will be estimated.

#### Flowback

During completion/recompletion flowback operations, after separation flowback begins and as soon as it is technically feasible, Permian routes gas though a permanent separator and the controlled facility where the gas is either sold or flared through a high-pressure flare if needed.

#### Production

Per 19.15.27.8.D, Permian's facilities are designed to minimize waste. Our produced gas will only be vented or flared in an emergency or malfunction situation, except as allowed for normal operations noted in 19.15.27.8.D(2) & (4). All gas that is flared is metered. All gas that may be vented will be estimated.

#### Performance Standards

Permian utilizes a production forecast from our Reservoir Engineering team to appropriately size each permanent, 3-phase separator and heater treater utilized for production operations.

All of Permian's permanent storage tanks associated with production operations which are routed to a flare or control device are equipped with an automatic gauging system.

All of Permian's flare stacks, both currently installed and for future installation, are:

1) Appropriately sized and designed to ensure proper combustion effciency.

2)Equipped with an automatic ignitor or continuous pilot.

3) Anchored and located at least 100 feet from the well and storage tanks.

Permian's field operations and HSE teams have implemented an AVO inspection schedule that adheres to the requirements of 19.15.27.8.E(5).

All of our operations and facilities are designed to minimize waste. We routinely employ the following methods and practices:

- Closed-loop systems
- Enclosed and properly sized tanks

- Low-emitting or electric engines whenever practical
- Combustors and flare stacks in the event of a malfunction or emergency
- Routine facility inspections to identify leaking components, functioning control devices, such as flares and combustors, and repair / replacement of malfunctioning components where applicable

#### Measurement or estimation

Permian measures or estimates the volumes of natural gas vented, flared and/or beneficially used for all of our drilling, completing and producing wells. We utilize accepted industry standards and methodology which can be independently verified. Annual GOR testing is completed on our wells and will be submitted as required by the OCD. None of our equipment is designed to allow diversion around metering elements except during inspection, maintenance and repair operations.

#### VIII. Best Management Practices:

Permian Resources utilizes the following BMPs to minimize venting during active and planned maintenance activities:

- Use a closed-loop process wherever possible during planned maintenance activities, such as blowdowns, liquid removal, and work over operations.
- Employ low-emitting or electric engines for equipment, such as compressors
- Adhere to a strict preventative maintenance program which includes routine facility inspections, identification of component malfunctions, and repairing or replacing components such as hatches, seals, valves, etc. where applicable
- Utilize vapor recovery units (VRU's) to maximize recovery of volumes of low-pressure gas streams and potential unauthorized emissions
- Route low pressure gas and emissions streams to a combustion device to prevent venting where necessary

#### **Enhanced Natural Gas Management Plan**

#### **Operator's Plan to Manage Production in Response to Increased Line Pressure**

Permian Resources Operating, LLC (Permian) anticipates that its existing wells connected to the same portion of the natural gas gathering system will continue to meet anticipated increases in line pressure caused by the new wells. Permian will actively monitor line pressure throughout the field and will make necessary adjustments to existing production separators' pressures to send gas to sales. Permian also plans to implement automated alarms on all flare meters to alert of flaring events as they occur. The alarms will send notifications to field operations and engineering staff via text message and email at every occurrence of flaring. In addition, Permian plans to implement automated alarms on all flare meters to alert of any continuous flaring event that has continued for at least 4 hours. The alarms will send notifications to field operations and engineering management. Permian personnel will promptly respond to these alarms, communicate with midstream partners, and take the appropriate action to reduce flaring caused by high line pressure from new well production.

I. Purpose

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |
|                               |                                    |                        |

The purpose of this contingency plan (Plan) is to provide Permian Resources Corporation. (Permian Resources) with an organized plan of action for alerting and protecting Permian Resources employees, the general public, and any potential first responders prior to any intentional release or immediately following the accidental / unintentional release of a potentially hazardous volume / concentration of Hydrogen Sulfide Gas (H2S).

#### II. Scope & Applicability

This Plan applies to all planned, unplanned, uncontrolled and/or unauthorized releases of hazardous concentrations of H<sub>2</sub>S or any associated hazardous byproducts of combustion, occurring at any Permian Resources owned or operated facilities including but not limited to: wells, flowlines, pipelines, tank batteries, production facilities, SWD facilities, compressor stations, gas processing plants, drilling / completions / workover operations, and any other applicable company owned property.

#### Section 2.0 - Plan Implementation

#### I. Activation Requirements

In accordance with the requirements of Bureau of Land Management Onshore Order #6 and NMAC 19.15.11, this Plan shall be activated in advance of any authorized, planned, unplanned, uncontrolled, or unauthorized release of a hazardous volume / concentration of  $H_2S$  gas, or  $SO^2$ , which could potentially adversely impact the workers, general public or the environment.

#### II. Emergency Evacuation

In the event of an unplanned, uncontrolled, or unauthorized release of a hazardous volume / concentration of  $H_2S$  gas, the first priority is to ensure the safety of the workers and general public. Upon discovery and subsequent determination of an applicable release, which cannot be quickly mitigated, immediately by using 911, notify local authorities to begin the process of alerting the general public, evacuate any residents within the Radius of Exposure (ROE), and limit any general public or employee access to any areas within the ROE of the affected facility.

#### III. Emergency Response Activities

The purpose of emergency response actions is to take steps to quickly mitigate / stop the ongoing release of the hazardous source of H<sub>2</sub>S. Upon discovery of any hazardous release, immediately notify Permian Resources management to activate the Emergency Response Team (ERT). Once Permian Resources supervision arrives and assesses the situation, a work plan identifying the proper procedures shall be developed to stop the release.

#### Section 3.0 - Potential Hazardous Conditions & Response Actions

During a planned or unplanned release of H<sub>2</sub>S, there are several hazardous conditions that are presented both to employees, the general public, and emergency responders. These specific hazardous conditions are identified in the tables below.

Permian Resources Corporation

#### H₂S Contingency Plan Winnebago 30 State Com 301H, 302H, 501H, 502H, 601H, 602H

Lea County, New Mexico

| GREEN  |  |
|--|--|
| H <sub>2</sub> S concentration <10 ppm detected by location monitors   |  |
| General Actions During Condition 1   |  |
| Notify Site Supervisor / Permian Resources Person-in-Charge (PIC) of any observed increase<br>in ambient H <sub>2</sub> S concentrations   |  |
| All personnel check safety equipment is in adequate working order & store in accessible location   |  |
| Sensitize crews with safety meetings.  |  |
| Limit visitors and non-essential personnel on location   |  |
| Continuously monitor H <sub>2</sub> S concentrations and check calibration of sensors  |  |
| Ensure $H_2S$ scavenger is on location.  |  |
| H <sub>2</sub> S CONDITION 2: MODERATE DANGER TO LIFE AND HEALTH → WARNING SIGN YELLOW   |  |
| H <sub>2</sub> S concentration >10 ppm and < 30 ppm in atmosphere detected by location monitors:   |  |
| General Actions During Condition 2   |  |
| Sound H <sub>2</sub> S alarm and/or display yellow flag.   |  |
| Account for on-site personnel  |  |
| Upon sounding of an area or personal H <sub>2</sub> S monitor alarm when 10 ppm is reached, proceed to a safe briefing area upwind of the location immediately (see <b>MA-4</b> , Figure 5-1).   |  |
| Don proper respiratory protection.   |  |
| Alert other affected personnel   |  |
| <u>If trained and safe to do so</u> undertake measures to control source H2S discharge and<br>eliminate possible ignition sources. Initiate Emergency Shutdown procedures as deemed<br>necessary to correct or control the specific situation. |  |
| Account for on-site personnel at safe briefing area.   |  |
| Stay in safe briefing area if not working to correct the situation.  |  |
| Keep Site Supervisor / Permian Resources PIC informed.<br>Notify applicable government agencies ( <b>Appendix A</b> )<br>If off-site impact; notify any neighbors within Radius of Exposure ( <b>ROE</b> ), <b>Fig 5.11</b>                    |  |
| Continuously monitor H <sub>2</sub> S until readings below 10 ppm.   |  |
| Evacuated area shall not be re-entered except by trained and authorized personnel utilizing appropriate respiratory protection; or until "all clear" sounded by Permian Resources PIC / Site Supervisor.                                       |  |
|  |  |

Г

Permian Resources Corporation

#### H<sub>2</sub>S Contingency Plan Winnebago 30 State Com 301H, 302H, 501H, 502H, 601H, 602H

| > 30 ppm H <sub>2</sub> S concentration in air detected by location monitors: Extreme danger to life  |  |
|---|--|
| General Actions During Condition 3  |  |
| Sound H <sub>2</sub> S alarm and/or display red flag.   |  |
| Account for on-site personnel   |  |
| Move away from H <sub>2</sub> S source and get out of the affected area.  |  |
| Proceed to designated safe briefing area; alert other affected personnel.   |  |
| Account for personnel at safe briefing area.  |  |
| If trained and safe to do so undertake measures to control source H2S discharge and<br>eliminate possible ignition sources. Initiate Emergency Shutdown procedures as deemed<br>necessary to correct or control the specific situation.   |  |
| Notify vehicles or situation and divert all traffic away from location.   |  |
| Permian Resources Peron-in-Charge will make appropriate community notifications.  |  |
| Red warning flag must be on display until the situation has been corrected and the Permian<br>Resources Person-in-Charge determines it is safe to resume operations under <b>Condition</b><br><b>1</b> .  |  |
| Notify management of the condition and action taken. If H <sub>2</sub> S concentration is increasing and steps to correct the situation are not successful – or at any time if well control is questionable – alert all responsible parties for possible activation of the H <sub>2</sub> S Contingency Plan. If well control at the surface is lost, determine if situation warrants igniting the well.  |  |
| If uncontrolled flow at the surface occurs, the Permian Resources PIC, with approval, if possible, from those coordinating the emergency (as specified in the site-specific H <sub>2</sub> S Contingency Plan) are responsible for determining if the situation warrants igniting the flow of the uncontrolled well. This decision should be made only as a last resort and in a situation where it is obvious that human life is in danger and there is no hope of controlling the flow under prevailing conditions. |  |
| If the flow is ignited, burning H <sub>2</sub> S will be converted to sulfur dioxide (SO <sub>2</sub> ), which is also highly toxic. Do not assume that area is safe after the flow is ignited. If the well is ignited, evacuation of the area is mandatory, because SO <sub>2</sub> will remain in low-lying places under no-wind conditions.  |  |
| <ul> <li>Keep Site Supervisor / Permian Resources PIC informed.</li> <li>Notify applicable government agencies and local law enforcement (Appendix A)</li> <li>If off-site impact; notify any neighbors within the Radius of Exposure (ROE), see example in Figure 5-11.</li> </ul>   |  |
| Continuously monitor H <sub>2</sub> S until readings fall below 10 ppm.   |  |
| Evacuated area shall not be re-entered except by trained and authorized personnel utilizing appropriate respiratory protection; or until "all clear" sounded by Permian Resources PIC / Site Supervisor.  |  |
| IF ABOVE ACTIONS CANNOT BE ACCOMPLISHED IN TIME TO PREVENT<br>EXPOSURE TO THE PUBLIC  |  |
| Alert public (directly or through appropriate government agencies) who may be subject to potentially harmful exposure levels.   |  |

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |
|                               |                                    |                        |

| Make recommendations to public officials regarding blocking unauthorized access to the unsafe area and assist as appropriate. |  |
|---|--|
| Make recommendations to public officials regarding evacuating the public and assist as appropriate.                           |  |
| Monitor ambient air in the area of exposure (after following abatement measures) to determine when it is safe for re-entry.   |  |

#### Section 4.0 - Notification of H<sub>2</sub>S Release Event

#### I. Local & State Law Enforcement

Prior to the planned / controlled release of a hazardous concentration of  $H_2S$  gas or any associated byproducts of the combustion of  $H_2S$  gas, notify local law enforcement agencies regarding the contents of this plan.

In the event of the discovery of an unplanned/uncontrolled release of a hazardous concentration of H<sub>2</sub>S gas or any associated byproducts of combustion, immediately notify local and/or state law enforcement agencies of the situation and ask for their assistance.

#### II. General Public

In the event of a planned or unplanned release of a hazardous concentration of H<sub>2</sub>S gas or any associated byproducts of combustion, notify local law enforcement agencies and ask for their assistance in alerting the general public and limiting access to any public roads that may be impacted by such a release.

#### III. New Mexico Oil Conservation Division

The Permian Resources HSE Department will make any applicable notification to the New Mexico OCD regarding any release of a hazardous concentration of H<sub>2</sub>S Gas or any associated byproducts of combustion.

#### IV. New Mexico Environment Department

The Permian Resources HSE Department will make any applicable notifications to the NMED regarding any release of a hazardous concentration of H<sub>2</sub>S gas or any associated byproducts of combustion.

#### V. Bureau of Land Management

The Permian Resources Regulatory Department will make any applicable notifications to the BLM regarding any release of a hazardous concentration of  $H_2S$  gas or any associated byproducts of combustion.

#### Section 6.0 – Drilling Location Information

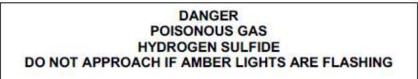

#### I. Site Safety Information

#### 1. Safe Briefing Area

a. There shall be two areas that will be designated as "SAFE BRIEFING AREAS". If H<sub>2</sub>S is detected in concentrations equal to or in excess of 10 ppm all personnel not assigned emergency duties are to assemble in the designated Safe Briefing area for instructions. These two areas shall be positioned in accessible locations to facilitate the availability of self-contained breathing air devices. The briefing areas shall be positioned no less than 250' from the wellhead and in such locations that at least one briefing area will be upwind from the well at all times.

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |

- 2. Wind Indicators
  - a. 4 Windsocks will be installed at strategic points on the facility.
- 3. Danger Signs
  - a. A warning sign indicating the possible well conditions will be displayed at the location entrance.

- 4. <u>H<sub>2</sub>S Detectors and Alarms</u>
  - a. Continuous monitoring type H<sub>2</sub>S detectors, capable of sensing a minimum of 5ppm H<sub>2</sub>S in air will be located centrally located at the tanks, heater treater, and combustor. Continuous monitoring type SO<sub>2</sub> detector will also be located at the combustor. The automatic H<sub>2</sub>S alarm/flashing light will be located at the site entrance and in front of tank battery.
- 5. Safety Trailer
  - a. A safety trailer equipped with an emergency cascade breathing air system with 2 ea. Work/escape packs, a stretcher, 2 OSHA approved full body harnesses, and a 20# Class ABC fire extinguisher shall be available at the site in close proximity to the safe briefing area. The cascade system shall be able to be deployed to the drill floor when needed to provide safe breathing air to the workers as needed.

#### 6. Well Control Equipment

- a. The location shall have a flare line to a remote automatic ignitor and back up flare gun, placed 150' from the wellhead.
- b. The location shall be equipped with a remotely operated choke system and a mud gas separator.

#### 7. Mud Program

a. Company shall have a mud program that contains sufficient weight and additives to control  $H_2S$ .

#### 8. <u>Metallurgy</u>

- a. All drill strings, casing, tubing, wellhead, BOP, spools, kill lines, choke manifold and lines, and valves shall be suitable for anticipated H<sub>2</sub>S volume and pressure.
- 9. Communication
  - a. The location shall be equipped with a means of effective communication such as a cell phones, intercoms, satellite phones or landlines.

#### Section 7.0 – Hazard Communication

#### I. Physical Characteristics of Hydrogen Sulfide Gas

Hydrogen sulfide (H<sub>2</sub>S) is a colorless, poisonous gas that is soluble in water. It can be present in crude oils, condensates, natural gas and wastewater streams.

 $H_2S$  is heavier than air with a vapor density of 1.189 (air = 1.0); however,  $H_2S$  is most often mixed with other gases. These mixtures of  $H_2S$  and other gases can be heavier or lighter than air. If the  $H_2S$ -containing mixture is heavier, it can collect in low areas such as ditches, ravines, firewalls, and pits; in storage tanks; and in areas of poor ventilation. Please see physical properties in **Table 7.0**.

With H<sub>2</sub>S the sense of smell is rapidly lost allowing lethal concentrations to be accumulated without warning. The toxicity of hydrogen sulfide at varying concentrations is indicated in the **Table 7.1**.

**Warning:** Do not use the mouth-to-mouth method if a victim ingested or inhaled hydrogen sulfide. Give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.

#### Table 7.0. Physical Properties of H<sub>2</sub>S

| Properties of H2S                                  | Description  |
|--|--|
| Vapor Density > 1 = 1.189<br>Air = 1               | <ul> <li>H2S gas is slightly heavier than air, which can cause it to settle in low places and build in concentration.</li> <li>Produced as a mixture with other gases associated with oil and gas production.</li> </ul> |
| Flammable Range 4.3%-46%<br>43000 ppm – 460000 ppm | <ul> <li>H2S can be extremely flammable / explosive when these<br/>concentrations are reached by volume in air.</li> </ul>   |

Although H<sub>2</sub>S is primarily a respiratory hazard, it is also flammable and forms an explosive mixture at concentrations of 4.3%–46.0% (40,000ppm – 460,000 ppm) by volume in air.

#### H<sub>2</sub>S can be encountered when:

- Venting and draining equipment.
- Opening equipment (separators, pumps, and tanks).
- Opening piping connections ("line breaking").
- Gauging and sampling storage tanks.
- Entering confined spaces.
- Working around wastewater pits, skimmers, and treatment facilities.
- II. Human Health Hazards Toxicological Information

#### Table 7.1. Hazards & Toxicity

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |

| Concentration       | Symptoms/Effects  |
|---------------------|---|
| (ppm)               |   |
| 0.00011-0.00033 ppm | Typical background concentrations   |
|                     |   |
| 0.01-1.5 ppm        | Odor threshold (when rotten egg smell is first noticeable to some). Odor becomes        |
|                     | more offensive at 3-5 ppm. Above 30 ppm, odor described as sweet or sickeningly         |
|                     | sweet.  |
| 2-5 ppm             | Prolonged exposure may cause nausea, tearing of the eyes, headaches or loss of          |
|                     | sleep. Airway problems (bronchial constriction) in some asthma patients.                |
| 20 ppm              | Possible fatigue, loss of appetite, headache, irritability, poor memory, dizziness.     |
|                     |   |
| 50-100 ppm          | Slight conjunctivitis ("gas eye") and respiratory tract irritation after 1 hour. May    |
|                     | cause digestive upset and loss of appetite.   |
| 100 ppm             | Coughing, eye irritation, loss of smell after 2-15 minutes (olfactory fatigue). Altered |
|                     | breathing, drowsiness after 15-30 minutes. Throat irritation after 1 hour. Gradual      |
|                     | increase in severity of symptoms over several hours. Death may occur after 48 hours.    |
| 100-150 ppm         | Loss of smell (olfactory fatigue or paralysis).   |
| 200-300 ppm         | Marked conjunctivitis and respiratory tract irritation after 1 hour. Pulmonary edema    |
|                     | may occur from prolonged exposure.  |
| 500-700 ppm         | Staggering, collapse in 5 minutes. Serious damage to the eyes in 30 minutes. Death      |
|                     | after 30-60 minutes.  |
| 700-1000 ppm        | Rapid unconsciousness, "knockdown" or immediate collapse within 1 to 2 breaths,         |
|                     | breathing stops, death within minutes.  |
| 1000-2000 ppm       | Nearly instant death  |

#### III. Environmental Hazards

 $H_2S$  and its associated byproducts from combustion presents a serious environmental hazard. Sulphur Dioxide SO<sub>2</sub> is produced as a constituent of flaring  $H_2S$  Gas and can present hazards associated, which are similar to  $H_2S$ . Although SO<sub>2</sub> is heavier than air, it will be picked up by a breeze and carried downwind at

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |

elevated temperatures. Since Sulfur Dioxide is extremely irritating to the eyes and mucous membranes of the upper respiratory tract, it has exceptionally good warning powers in this respect. The following table indicates the toxic nature of the gas. Please see the attached SDS in Appendix B for reference.

|                  | SULFUR DIOXIDE TOXICITY |  |  |
|------------------|-------------------------|--|--|
| Conce            | ntration                | Effects  |  |
| %SO <sub>2</sub> | PPM                     |  |  |
| 0.0005           | 3 to 5                  | Pungent odor-normally a person can detect SO <sub>2</sub> in this range.                 |  |
| 0.0012           | 12                      | Throat irritation, coughing, and constriction of the chest tearing and smarting of eyes. |  |
| 0.15             | 150                     | So irritating that it can only be endured for a few minutes.                             |  |
| 0.05             | 500                     | Causes a sense of suffocation, even with first breath.                                   |  |

#### III. New Mexico OCD & BLM – H<sub>2</sub>S Concentration Threshold Requirements

New Mexico NMAC 19.15.11 and Onshore Order #6 identify two Radii of Exposure (ROE) that identify potential danger to the public and require additional compliance measures. Permian Resources is required to install safety devices, establish safety procedures and develop a written H<sub>2</sub>S contingency plan for sites where the H<sub>2</sub>S concentrations are as follows.

| Table 8.1. Calculat | ting H <sub>2</sub> S Radius of Exposure |
|---------------------|--|
|                     |  |
|                     |  |

| H₂S Radius of<br>Exposure | Description   | Control and Equipment Requirements  |
|---------------------------|---|---|
| 100 ppm                   | Distance from a release to where the $H_2S$ concentration in the air will dilute below 100ppm | <ul> <li>ROE &gt; 50-ft and includes any part of a<br/>"public area" (residence, school, business,<br/>etc., or any area that can be expected to<br/>be populated).</li> <li>ROE &gt; 3,000-ft</li> </ul> |

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |
|                               |                                    |                        |

| 500 ppmDistance from a release to where the<br>H2S concentration in the air will dilute<br>below 500ppm | ROE > 50-ft and includes any part of a public<br>road (public roads are tax supported roads<br>or any road used for public access or use) |
|---|---|
|---|---|

#### Calculating H<sub>2</sub>S Radius of Exposure

The ROE of an H<sub>2</sub>S release is calculated to determine if a potentially hazardous volume of H<sub>2</sub>S gas at 100 or 500 parts per million (ppm) is within a regulated distance requiring further action. If information about the concentration of H<sub>2</sub>S and the potential gas release volume is known, the location of the Muster Areas will be set, and safety measures will be implemented based on the calculated radius of exposure (ROE). NMAC 19.15.11 – Hydrogen Sulfide Safety defines the ROE as the radius constructed with the gas's point of escape as its center and its length calculated by the following Pasquill-Gifford equations:

To determine the extent of the **<u>100 ppm ROE</u>**:

 $x = [(1.589) \text{ (mole fraction H}_2S)(Q)]^{(.6258)}$ .

To determine the extent of the **500 ppm ROE**:

 $x = [(0.4546) \text{ (mole fraction H}_2S)(Q)]^{(.6258)}$ .

#### Table 8.2. Calculating H2S Radius of Exposure

| <b>ROE</b> Variable   | Description  |  |
|---|--|--|
| X =   | ROE in feet  |  |
| Q = Max volume of gas released determined to be released in cubic feet per day<br>(ft <sup>3</sup> /d) normalized to standard temperature and pressure, 60°F and 14.65 psia |  |  |
| Mole fraction H <sub>2</sub> S =  | Mole fraction of H <sub>2</sub> S in the gaseous mixture released. |  |

The volume used as the escape rate in determining the ROE is specified in the rule as follows:

- The maximum daily volume rate of gas containing H<sub>2</sub>S handled by that system element for which the ROE is calculated.
- For existing gas wells, the current adjusted open-flow rate, or the operator's estimate of the well's capacity to flow against zero back-pressure at the wellhead.

# New Mexico Oil Conservation Division & BLM Site Requirements under NMAC 19.15.11 & Onshore Order #6

- Two cleared areas will be designated as Safe Briefing Areas. During an emergency, personnel will assemble in one of these areas for instructions from the Permian Resources Person-in-Charge. Prevailing wind direction should be considered in locating the briefing areas 200' or more on either side of the well head. One area should offset the other at an angle of 45° to 90° with respect to prevailing wind direction to allow for wind shifts during the work period.
- In the event of either an intentional or accidental releases of hydrogen sulfide, safeguards to protect the general public from the harmful effects of hydrogen sulfide must be in place for operations. A summary of the provisions in each of three H<sub>2</sub>S ROE cases is included in **Table 8.3**.
  - **CASE 1** -100 ppm ROE < 50'

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|

#### Section 9.0 - Training Requirements

#### Training

The following elements are considered a minimum level of training for personnel assigned to operations who may encounter H<sub>2</sub>S as part of routine or maintenance work.

- The hazards, characteristics, and properties of hydrogen sulfide (H<sub>2</sub>S) and (SO<sub>2</sub>).
- Sources of H<sub>2</sub>S and SO<sub>2</sub>.
- Proper use of H<sub>2</sub>S and SO<sub>2</sub> detection methods used at the workplace.
- Recognition of, and proper response to, the warning signals initiated by H<sub>2</sub>S and SO<sub>2</sub> detection systems in use at the workplace.
- Symptoms of H<sub>2</sub>S exposure; symptoms of SO<sub>2</sub> exposure
- Rescue techniques and first aid to victims of H<sub>2</sub>S and SO<sub>2</sub> exposure.
- Proper use and maintenance of breathing equipment for working in H<sub>2</sub>S and SO<sub>2</sub> atmospheres, as appropriate theory and hands-on practice, with demonstrated proficiency (29 *CFR* Part 1910.134).
- Workplace practices and relevant maintenance procedures that have been established to protect personnel from the hazards of H<sub>2</sub>S and SO<sub>2</sub>.
- Wind direction awareness and routes of egress.

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |

- Confined space and enclosed facility entry procedures (if applicable).
- Emergency response procedures that have been developed for the facility or operations.
- Locations and use of safety equipment.
- Locations of safe briefing areas.

#### Refresher training will be conducted annually.

#### Section 10.0 - Personal Protective Equipment

#### I. <u>Personal H<sub>2</sub>S Monitors</u>

All personnel engaged in planned or unplanned work activity to mitigate the release of a hazardous concentration of H<sub>2</sub>S shall have on their person a personal H2S monitor.

- II. Fixed H<sub>2</sub>S Detection and Alarms
  - 4 channel H<sub>2</sub>S monitor
  - 4 wireless H<sub>2</sub>S monitors
  - H<sub>2</sub>S alarm system (Audible/Red strobe)
  - Personal gas monitor for each person on location
  - Gas sample tubes

#### III. Flame Resistant Clothing

All personnel engaged in planned or unplanned work activity associated with this Plan shall have on the appropriate level of FRC clothing.

IV. <u>Respiratory Protection</u>

The following respiratory protection equipment shall be available at each drilling location.

- Working cascade system available on rig floor and pit system & 750' of air line hose
- Four (4) breathing air manifolds
- Four (4) 30-minute rescue packs
- Five (5) work/Escape units
- Five (5) escape units
- One (1) filler hose for the work/escape/rescue units

Supplied air (airline or SCBA) respiratory protection against hydrogen sulfide exposure is required in the following situations:

- When routine or maintenance work tasks involve exposure to H<sub>2</sub>S concentrations of 10 ppm or greater.
- When a fixed location area monitor alarms, and re-entry to the work area is required to complete a job.
- When confined spaces are to be entered without knowledge of H<sub>2</sub>S levels present, or if initial measurements are to be taken of H<sub>2</sub>S levels.
- During rescue of employees suspected of H<sub>2</sub>S overexposure.
- For specific tasks identified with significant exposure potential and outlined in local program guidelines.
- All respiratory equipment for hydrogen sulfide must be of the supplied-air type, equipped with pressure-demand regulators and operated in the pressure-demand mode only. This is the only type of respiratory protection recommended for hydrogen sulfide application. Equipment should be approved by NIOSH/MSHA or other recognized national authority as required. If airline units are used, a five-minute egress bottle should also be carried.

| Permian Resources Corporation | H <sub>2</sub> S Contingency Plan  | Lea County, New Mexico |
|-------------------------------|------------------------------------|------------------------|
|                               | Winnebago 30 State Com 301H, 302H, |                        |
|                               | 501H, 502H, 601H, 602H             |                        |

- Gas masks or other air-purifying respirators MUST NEVER BE USED FOR HYDROGEN SULFIDE due to the poor warning properties of the gas.
- Use of respiratory protection should be accompanied by a written respiratory protection program.

| 5.3. Specific hazards arising from the h   | azardous product   |
| Fire hazard  | EXTREMELY FLAMMABLE GAS. If venting or leaking gas catches fire, do not extinguish<br>frames. Flammable vapors may spread from leak, creating an explosive reignition hazard.<br>Vapors can be ignited by pilot lights, other flames, smoking, sparks, heaters, electrical<br>equipment, static discharge, or other ignition sources at locations distant from product handling<br>point. Explosive atmospheres may linger. Before entering an area, especially a confined area,<br>check the atmosphere with an appropriate device.   |
| Explosion hazard   | : EXTREMELY FLAMMABLE GAS. Forms explosive mixtures with air and oxidizing agents.   |
| Reactivity   | : No reactivity hazard other than the effects described in sub-sections below.   |
| Reactivity in case of fire   | : No reactivity hazard other than the effects described in sub-sections below.   |
| 5.4. Special protective equipment and p  | recautions for fire-fighters   |
| Firefighting instructions  | : DANGER! Toxic, flammable liquefied gas   |
|  | Evacuate all personnel from the danger area. Use self-contained breathing apparatus (SCBA)<br>and protective clothing. Immediately cool containers with water from maximum distance. Stop<br>flow of gas if safe to do so, while continuing cooling water spray. Remove ignition sources if<br>safe to do so. Remove containers from area of fire if safe to do so, On-site fire brigades must<br>comply with their provincial and local fire code regulations.  |
| Special protective equipment for fire fighters   | : Standard protective clothing and equipment (Self Contained Breathing Apparatus) for fire<br>fighters.  |
| Other information  | : Containers are equipped with a pressure relief device. (Exceptions may exist where authorized<br>by TC.).  |
| SECTION 6: Accidental release mea  | curae  |
|  | upment and emergency procedures  |
| General measures   | : DANGER! Toxic, flammable liquefied gas . Forms explosive mixtures with air and oxidizing   |
|  | agents. Immediately evacuate all personnel from danger area. Use self-contained breathing<br>apparatus where needed. Remove all sources of ignition if safe to do so. Reduce vapors with<br>fog or fine water spray, taking care not to spread liquid with water. Shut off flow if safe to do so<br>Ventilate area or move container to a well-ventilated area. Flammable vapors may spread from<br>leak and could explode if reignited by sparks or flames. Explosive atmospheres may linger.<br>Before entering area, especially confined areas, check atmosphere with an appropriate device |
| 6.2. Methods and materials for containing  |  |
| Methods for cleaning up  | Try to stop release. Reduce vapour with fog or fine water spray. Prevent waste from<br>contaminating the surrounding environment. Prevent soil and water pollution. Dispose of<br>contents/container in accordance with local/regional/national/international regulations. Contac<br>supplier for any special requirements.  |
| 6.3. Reference to other sections   |  |
| For further information refer to section 8: Ex   | posure controls/personal protection  |
| SECTION 7: Handling and storage  |  |
| 7.1. Precautions for safe handling   |  |
| The second secon | : Leak-check system with scapy water; never use a flame  |
|  |  |
| Precautions for safe handling  | All piped systems and associated equipment must be grounded  |
|  | All piped systems and associated equipment must be grounded<br>Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No<br>smoking. Use only non-sparking tools. Use only explosion-proof equipment   |

Hydrogen sulfide

Safety Data Sheet E-4611 according to the Hazardous Products Regulation (February 11, 2015) Date of issue: 10-15-1979 Revision date: 08-10-2016 Supersedes: 10-15-2013

7.2. Conditions for safe storage, including any incompatibilities

Storage conditions

Store only where temperature will not exceed 125°F (52°C). Post "No Smoking/No Open Flames" signs in storage and use areas. There must be no sources of ignition. Separate packages and protect against potential fire and/or explosion damage following appropriate codes and requirements (e.g., NFPA 30, NFPA 55, NFPA 70, and/or NFPA 221 in the U.S.) or according to requirements determined by the Authority Having Jurisdiction (AHJ). Always secure containers upright to keep them from falling or being knocked over. Install valve protection cap, if provided, firmly in place by hand when the container is not in use. Store full and empty containers for long periods. For other precautions in using this product, see section 16

OTHER PRECAUTIONS FOR HANDLING, STORAGE, AND USE: When handling product under pressure, use piping and equipment adequately designed to withstand the pressures to be encountered. Never work on a pressurized system. Use a back flow preventive device in the piping. Gases can cause rapid suffocation because of oxygen deficiency; store and use with adequate ventilation. If a leak occurs, close the container valve and blow down the system in a safe and environmentally correct manner in compliance with all international, federal/national, state/provincial, and local laws; then repair the leak. Never place a container where it may become part of an electrical circuit.

Appropriate engineering controls

: Use corrosion-resistant equipment. Use an explosion-proof local exhaust system. Local exhaust and general ventilation must be adequate to meet exposure standards. MECHANICAL (GENERAL): Inadequate - Use only in a closed system. Use explosion proof equipment and

|                                  | lighting.  |
|----------------------------------|--|
| 8.3. Individual protection measu | res/Personal protective equipment  |
| Personal protective equipment    | : Safety glasses. Face shield. Gloves.   |
| Hand protection                  | : Wear work gloves when handling containers. Wear heavy rubber gloves where contact with<br>product may occur.   |
| Eye protection                   | : Wear goggles and a face shield when transfilling or breaking transfer connections. Select in<br>accordance with the current CSA standard Z94.3, "Industrial Eye and Face Protection", and<br>any provincial regulations, local bylaws or guidelines.   |
| Respiratory protection           | Respiratory protection: Use respirable fume respirator or air supplied respirator when working<br>in confined space or where local exhaust or ventilation does not keep exposure below TLV.<br>Select in accordance with provincial regulations, local bylaws or guidelines. Selection should be<br>based on the current CSA standard Z94.4, "Selection, Care, and Use of Respirators."<br>Respirators should also be approved by NIOSH and MSHA. For emergencies or instances with<br>unknown exposure levels, use a self-contained breathing apparatus (SCBA). |
| Thermal hazard protection        | : Wear cold insulating gloves when transfilling or breaking transfer connections. Standard EN<br>511 - Cold insulating gloves.   |
| Other information                | Other protection : Safety shoes for general handling at customer sites. Metatarsal shoes and cuffless trousers for cylinder handling at packaging and filling plants. Select in accordance with the current CSA standard Z195, "Protective Foot Wear", and any provincial regulations, local bylaws or guidelines. For working with flammable and oxidizing materials, consider the use of flame resistant anti-static safety clothing.  |

| 9.1. Information on basic physical and chemical properties |  |  |  |  |  |
|--|--|--|--|--|--|
| Physical state   | : Gas  |  |  |  |  |
| Appearance   | : Colorless gas. Colorless liquid at low temperature or under high pressure.     |  |  |  |  |
| Molecular mass   | : 34 g/mol   |  |  |  |  |
| Colour   | : Colourless.  |  |  |  |  |
| Odour  | : Odour can persist. Poor warning properties at low concentrations. Rotten eggs. |  |  |  |  |
| Odour threshold  | Odour threshold is subjective and inadequate to warn of overexposure.            |  |  |  |  |

| 12.1. Toxicity                    |  |
|-----------------------------------|--|
| Ecology - general                 | : VERY TOXIC TO AQUATIC LIFE.  |
| Hydrogen sulfide (7783-06-4)      |  |
| LC50 fish 1                       | 0.0448 mg/l (Exposure time: 96 h - Species: Lepomis macrochirus [flow-through])            |
| LC50 fish 2                       | 0.016 mg/l (Exposure time: 96 h - Species: Pimephales prometas [flow-through])             |
| 12.2. Persistence and degradabili | ty i   |
| Hydrogen sulfide (7783-06-4)      |  |
| Persistence and degradability     | Not applicable for inorganic gases.  |
| 12.3. Bioaccumulative potential   |  |
| Hydrogen sulfide (7783-06-4)      | 17   |
| BCF fish 1                        | (no bioaccumulation expected)  |
| Log Pow                           | Not applicable.  |
| Log Kow                           | Not applicable.  |
| Bioaccumulative potential         | No data available.   |
| 12.4. Mobility in soil            |  |
| Hydrogen sulfide (7783-06-4)      | 2  |
| Mobility in soil                  | No data available.   |
| Log Pow                           | Not applicable.  |
| Log Kow                           | Not applicable.  |
| Ecology - soil                    | Because of its high volatility, the product is unlikely to cause ground or water pollution |
| 12.5. Other adverse effects       |  |
| Other adverse effects             | : May cause pH changes in aqueous ecological systems.                                      |
| Effect on the ozone layer         | None   |
| Effect on global warming          | : No known effects from this product   |

#### Material Name: SULFUR DIOXIDE

Wash thoroughly after handling. Do not breathe dusts or mists. Response IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. IF ON SKIN (or hair): Remove/take off immediately all contaminated clothing. Rinse skin with water/shower. Wash contaminated clothing before reuse. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Immediately call a POISON CENTER or doctor. Specific treatment (see label). Storage Store in a well-ventilated place. Keep container tightly closed. Store locked up Protect from sunlight. Disposal Dispose of contents/container in accordance with local/regional/national/international regulations. Other Hazards Contact with liquified gas may cause frostbite.

| CAS       | Component Name | Percent |
|-----------|----------------|---------|
| 7446-09-5 | Sulfur dioxide | 100.0   |

#### Inhalation

IF INHALED: Remove person to fresh air and keep at rest in a position comfortable for breathing. Get immediate medical attention.

Skin

IF ON SKIN (or hair): Remove/take off immediately all contaminated clothing. Rinse skin with water/shower. Wash contaminated clothing before reuse. If frostbite or freezing occur, immediately flush with plenty of lukewarm water (105-115°F; 41-46°C). If warm water is not available, gently wrap affected parts in blankets. DO NOT induce vomiting. Get immediate medical attention.

Eyes

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get immediate medical attention.

Ingestion

IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Get immediate medical attention.

#### Most Important Symptoms/Effects

Acute

Toxic if inhaled, frostbite, suffocation, respiratory tract burns, skin burns, eye burns

Delayed

No information on significant adverse effects.

- Indication of any immediate medical attention and special treatment needed
- Treat symptomatically and supportively.

#### Note to Physicians

For inhalation, consider oxygen.

ACGIH - Threshold Limit Values - Biological Exposure Indices (BEI)

There are no biological limit values for any of this product's components.

#### **Engineering Controls**

Provide local exhaust or process enclosure ventilation system. Ensure compliance with applicable exposure limits. Individual Protection Measures, such as Personal Protective Equipment

#### Eye/face protection

Wear splash resistant safety goggles with a faceshield. Contact lenses should not be worn. Provide an emergency eye wash fountain and quick drench shower in the immediate work area.

#### Skin Protection

Wear appropriate chemical resistant clothing. Wear chemical resistant clothing to prevent skin contact.

## **Respiratory Protection**

Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other

## positive-pressure mode.

Glove Recommendations Wear appropriate chemical resistant gloves.

Equipment: BOPE with working pressure ratings in excess of anticipated maximum surface pressure will be utilized for well control from drill out of surface casing to TMD. The System may be upgraded to a higher pressure but still tested to the working pressure listed in the table above. If the system is upgraded all the components installed will be functional and tested. All BOPE connections shall be flanged, welded or clamped. All choke lines shall be straight unless targeted with running tees or tee blocks are used, and choke lines shall be anchored to prevent whip and reduce vibrations. All valves in the choke line & the choke manifold shall be full opening as to not cause restrictions and to allow for straight fluid paths to minimize potential erosion. All gauges utilized in the well control system shall be of a type designed for drilling fluid service. A top drive inside BOP valve will be utilized at all times. Subs equipped with full opening valves sized to fit the drill pipe and collars will be available on the rig floor in the open position. The key to operate said valve equipped subs will be on the rig floor at all times. The accumulator system will have sufficient capacity to open the HCR and close all three sets of rams plus the annular preventer while retaining at least 300 psi above precharge on the closing manifold (accumulator system shall be capable of doing so without using the closing unit pumps). The fluid reservoir capacity will be double the usable fluid volume of the accumulator system capacity, and the fluid level will be maintained at the manufacturer's recommended level. Prior to connecting the closing unit to the BOP stack, an accumulator precharge pressure test shall be performed to ensure the precharge pressure is within 100 psi of the desired precharge pressure (only nitrogen gas will be used to precharge). Two independent power sources will be made available at all times to power the closing unit pumps so that the pumps can automatically start when the closing valve manifold pressure has decreased to the preset level. Closing unit pumps will be sized to allow opening of HCR and closing of annular preventer on 5" drill pipe achieving at least 200 psi above precharge pressure with the accumulator system isolated from service in less than two minutes. A valve shall be installed in the closing line as close to the annular preventer as possible to act as a locking device; the valve shall be maintained in the open position and shall be closed only when the power source for the accumulator system is inoperative. Remote controls capable of opening and closing all preventers & the HCR shall be readily accessible to the driller; master controls with the same capability will be operable at the accumulator. The wellhead will be a multibowl speed head allowing for hangoff of intermediate casing & isolation of the 133/8 x 95/8 annulus without breaking the connection between the BOP & wellhead to install an additional casing head. A wear bushing will be installed & inspected frequently to guard against internal wear to wellhead. VBRs (variablebore rams) will be run in upper rambody of BOP stack to provide redundancy to annular preventer while RIH w/ production casing;

#### **Requesting Variance? YES**

Variance request: Flex hose and offline cement variances, see attachments in section 8. Testing Procedure: The BOP test shall be performed before drilling out of the surface casing shoe and will occur at a minimum: a. when initially installed b. whenever any seal subject to test pressure is broken c. following related repairs d. at 30 day intervals e. checked daily as to mechanical operating conditions. The ram type preventer(s) will be tested using a test plug to 250 psi (low) and 5,000 psi (high) (casinghead WP) with a test plug upon its installation onto the 13 surface casing. If a test plug is not used, the ram type preventer(s) shall be tested to 70% of the minimum internal yield pressure of the casing. The annular type preventer(s) shall be tested to 3500 psi. Pressure will be maintained for at least 10 minutes or until provisions of the test are met, whichever is longer. A Sundry Notice (Form 3160 5), along with a copy of the BOP test report, shall be submitted to the local BLM office within 5 working days following the test. If the bleed line is connected into the buffer tank (header), all BOP equipment including the buffer tank and associated valves will be rated at the required BOP pressure. The BLM office will be provided with a minimum of four (4) hours notice of BOP testing to allow witnessing. The BOP Configuration, choke manifold layout, and accumulator system, will be in compliance with Onshore Order 2 for a 5,000 psi system. A remote accumulator and a multi-bowl system will be used, please see attachment in section 8 for multi-bowl procedure. Pressures, capacities, and specific placement and use of the manual and/or hydraulic controls, accumulator controls, bleed lines, etc., will be identified at the time of the BLM 'witnessed BOP test. Any remote controls will be capable of both opening and closing all preventers and shall be readily accessible.

5. Circulating Medium

Mud System Type: Closed

Will an air or gas system be used: No

Describe what will be on location to control well or mitigate oter conditions: Sufficient quantities of mud materials will be on the well site at all times for the purpose of assuring well control and maintaining wellbore integrity. Surface interval will employ fresh water mud. The intermediate hole will utilize a saturated brine fluid to inhibit salt washout. The production hole will employ brine based and oil base fluid to inhibit formation reactivity and of the appropriate density to maintain well control.

Describe the mud monitoring system utilized: Centrifuge separation system. Open tank monitoring with EDR will be used for drilling fluids and return volumes. Open tank monitoring will be used for cement and cuttings return volumes. Mud properties will be monitored at least every 24 hours using industry accepted mud check

Cuttings Volume: 12310 Cu Ft

**Circulating Medium Table** 

| Top Depth | Bottom Depth | Mud Type        | Min Weight | Max Weight |  |  |
|-----------|--------------|-----------------|------------|------------|--|--|
| 0         | 1822         | Spud Mud        | 8.6        | 9.5        |  |  |
