completion of the well, and annually there	nenced on each multiply completed well we eafter as prescribed by the order authorizing	ng the multiple completion	. for Flow Tes	t No. 2 is to be the same a	d even though no leak was indicated during Flow Test No. 1. Procedure s for Flow Test No. 1 except that the previously produced zone shall		
chemical or fracture treatment, and when	I multiple completions within seven days f ever remedial work has been done on a w all also be taken at any time that communi	ell during which the packet	r or	in while the zone which wa	s previously shut-in is produced.		
requested by the Division.	an also be taken at any time that commun	cation is suspected of whe	<ol><li>Pressur</li></ol>		be measured on each zone with a deadweight pressure gauge at time ediately prior to the beginning of each flow period, at fifteen-minute		
<ol> <li>At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.</li> </ol>				intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells			
	ence when both zones of the dual complet at-in until the well-head pressure in each h in more than seven days		once at the e	nd of each test, with a dea	which must be crecked at least twice, once at the beginning and dweight pressure gauge. If a well is a gas-oil or an oil-gas dual e required on the oil zone only, with deadweight pressures as required		
nowever, that they need not remain shut-	in more than seven days.			taken on the gas zone.			

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
