(Instructions on page 2)

GENERAL INSTRUCTIONS

This form is designed for submitting proposals to perform certain well operations and reports of such operations when completed as indicated on Federal and Indian lands pursuant to applicable Federal law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local area or regional procedures and practices, are either shown below, will be issued by or may be obtained from the local Federal office.

SPECIFIC INSTRUCTIONS

Item 4 - Locations on Federal or Indian land should be described in accordance with Federal requirements. Consult the local Federal office for specific instructions.

Item 13: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by the local Federal office. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to the top of any tubing left in the hole; method of closing top of well and date well site conditioned for final inspection looking for approval of the abandonment. If the proposal will involve **hydraulic fracturing operations**, you must comply with 43 CFR 3162.3-3, including providing information about the protection of usable water. Operators should provide the best available information about all formations containing water and their depths. This information could include data and interpretation of resistivity logs run on nearby wells. Information may also be obtained from state or tribal regulatory agencies and from local BLM offices.

NOTICES

The privacy Act of 1974 and the regulation in 43 CFR 2.48(d) provide that you be furnished the following information in connection with information required by this application.

AUTHORITY: 30 U.S.C. 181 et seq., 351 et seq., 25 U.S.C. 396; 43 CFR 3160.

PRINCIPAL PURPOSE: The information is used to: (1) Evaluate, when appropriate, approve applications, and report completion of subsequent well operations, on a Federal or Indian lease; and (2) document for administrative use, information for the management, disposal and use of National Resource lands and resources, such as: (a) evaluating the equipment and procedures to be used during a proposed subsequent well operation and reviewing the completed well operations for compliance with the approved plan; (b) requesting and granting approval to perform those actions covered by 43 CFR 3162.3-2, 3162.3-3, and 3162.3-4; (c) reporting the beginning or resumption of production, as required by 43 CFR 3162.4-1(c) and (d) analyzing future applications to drill or modify operations in light of data obtained and methods used.

ROUTINE USES: Information from the record and/or the record will be transferred to appropriate Federal, State, local or foreign agencies, when relevant to civil, criminal or regulatory investigations or prosecutions in connection with congressional inquiries or to consumer reporting agencies to facilitate collection of debts owed the Government.

EFFECT OF NOT PROVIDING THE INFORMATION: Filing of this notice and report and disclosure of the information is mandatory for those subsequent well operations specified in 43 CFR 3162.3-2, 3162.3-3, 3162.3-4.

The Paperwork Reduction Act of 1995 requires us to inform you that:

The BLM collects this information to evaluate proposed and/or completed subsequent well operations on Federal or Indian oil and gas leases.

Response to this request is mandatory.

The BLM would like you to know that you do not have to respond to this or any other Federal agency-sponsored information collection unless it displays a currently valid OMB control number.

BURDEN HOURS STATEMENT: Public reporting burden for this form is estimated to average 8 hours per response, including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding the burden estimate or any other aspect of this form to U.S. Department of the Interior, Bureau of Land Management (1004-0137), Bureau Information Collection Clearance Officer (WO-630), 1849 C St., N.W., Mail Stop 401 LS, Washington, D.C. 20240

Subject: RE: [EXTERNAL] MCA 274 - P&A Alternate Proposed Procedure

Good afternoon Long,

Just updating the group and reiterating discussions in writing as requested. Based on your conversations with Gabe this morning:

Following our attempts to shoot and squeeze at both 2240' and 2000', both attempts failed to surface any fluid behind the production casing.

As discussed, we will now set a packer at 1300' (above TOF) and pump 90sacks cement down through the perfs previously shot at 2000'. TOC should be 1300', we will WOC 4hrs and tag to confirm.

If all is good, we will perf and attempt injection again.

Thanks,

Rico Jaramillo

I think you would need to verify with records that there is a plug from TOF to the required plug depth to continue plugging on top of the fish.

Yes sir we have a perf charge that will penetrate both tubing and casing.

As for running anything below (through) current TOF at 1311', we may not be able to depending on what we find following the cut.

-Ideally the cut sample proves inside of tubing fish is clear as reported in 2020 WO. - from there we are able to adhere to original procedure.

-However if we find the inside of the tubing fish is packed with cement, eliminating our access below, then we would like to propose plugging out at the TOF as detailed in the supplied alternate procedure.

We should have answers by EOD following the cutting of the top 20' of the Fish. We will let you know.

Subject: Re: [EXTERNAL] MCA 274 - P&A Alternate Proposed Procedure

Rico,

Do you have perforation charge that would penetrate the tubing and through the 5.5" casing? If you could not squeeze cement between the tubing x 5.5". You could still squeeze cement behind the 5.5" casing, the TOC behind the 5.5" is 2000'.

If cut tubing sample is entirely plugged with cement. Run GR to 2722' and tag inside top of cement. If top of cement is lower than 2722'. Run perforation gun to 2722', establish injection below the top of fish into the 2722' to surface. Then set cement retainer and squeeze cement from cement retainer to above the cement retainer.

Gilbert,

We are currently plugging this BLM well, we needed to amend the approved procedure. BLM has approved; do we need to notify NMOCD as well?

Again, we are on the well.

Subject: MCA 274 - P&A Alternate Proposed Procedure

Good afternoon Long,

As requested, based on your discussions with Gabe Dominguez yesterday, please see our attached alternate P&A procedure proposal.

Please let us know if you have any questions, thanks

Rico Jaramillo
