Subject: Notice of Intent to Perform Pit Closure and Interim Reclamation

Shell Exploration & Production Co., Latigo Ranch 2-34 (API No. 30-019-20136)

Guadalupe County, New Mexico

Dear Mr. Martin:

Shell Exploration & Production Company (Shell), as service provider to SWEPI LP in New Mexico, is submitting our Notice of Intent (Form C-103) to perform pit closure and interim reclamation for the subject well, to New Mexico Oil Conservation Division-District 4 (OCD) for your review and approval.

If you have any questions or require any additional information regarding these reports, please contact me at (303) 222-6347, or David Janney at Kleinfelder in Albuquerque at (505) 344-7373.

Regards,

Michael L. Bergstrom

Senior Regulatory Advisor

Shell Exploration & Production Company

Proposed Pit Closure and Interim Reclamation Procedures for Latigo Ranch 2-34

SWEPI LP will:

In 2010:

- 1) Reduce flowback and produced water volumes remaining in completions pit by operating spray evaporation and pumping equipment over the subject pit.
- 2) Remove residual fluids from the completions pit for off-site disposal at an OCD-approved facility.
- 3) Remove all solids, sludges and synthetic liners from the completions pit for offsite disposal at an OCD-approved facility. As needed, prior to transport for disposal, construct and operate a drying pad (minimum 20 mil HDPE liner and soil berms) to be used to evaporate excess moisture from the excavated pit contents.
- 4) Collect composite and individual confirmation soil samples from soils underlying the pit. Collect five-point composite soil sample(s) from underlying soils, and discrete soil samples from underlying soils in areas suspected of releases.
- 5) Submit soil samples for chemical analysis of benzene, total BTEX, TPH, GRO and DRO combined, and chlorides.
- 6) If laboratory analytical results indicate a release of pit fluids into the subsurface soils, over-excavate the pit area as needed and confirm removal of affected soils by additional soil sampling.
- 7) Install and maintain fencing around open pit.

In 2011:

- 8) Backfill, compact and recontour pit area to match existing surrounding ground surface.
- 9) Recontour all unused well location areas to match existing surrounding ground surface.
- 10) Spread reserved topsoil on previously-disturbed areas.
- 11) Develop revegetation plan in conjunction with surface owner, by conducting soil and vegetation surveys at and around the recontoured areas and selecting appropriate native species for seeding and identifying any necessary soil amendments.
- 12) In the fall, conduct seeding and soil amending (as needed). Install and maintain fencing around the revegetated areas. Monitor germination and growth of vegetation; if needed, re-seed in the subsequent fall.
- 13) Prepare and submit a closure report to OCD, including laboratory analytical reports and post-closure Location Photos.
