Re: DHC-515
Marathon Oil Company
McCallister State #6-L, Sec. 25, T17S, R34E
Vacuum Glorieta & Vacuum Blinebry

Gentlemen:

DHC-515 approved the downhole commingling of Vacuum Glorieta and Vacuum Blinebry production in the above-referenced well with a maximum oil production of 40 BOPD.

This well was recently worked over and additional perforations added in the Glorieta zone and after this workover the well test was 97 BOPD which exceeds the limitations set by DHC-515.

This may be a temporary response to the workover and the well may soon drop back to the 40 BOPD allowed by DHC-515. Please advise if action is to be taken by this office.

Very truly yours,

8-22-90

OIL CONSERVATION DIVISION

cc: Marathon Oil Company
Box 552
Midland, TX 79702

Jerry Sexton checked with Marathon and reported that daily oil production from the well has now declined to less than 30 bbls per day.
