Administrative Order SWD-971-B
September 27, 2013

**ADMINISTRATIVE ORDER
OF THE OIL CONSERVATION DIVISION**

Pursuant to the provisions of 19.15.26.8B. NMAC, XTO Energy, Incorporated (the "operator") seeks a modification of an existing administrative order for its Salty Dog Well No. 5 with a location of 1030 feet from the North line and 1365 feet from the East line, Unit letter B of Section 16, Township 29 North, Range 14 West, NMPM, San Juan County, New Mexico, for produced water disposal purposes. The modification is to allow a change in sources of produced water for disposal in this well.

THE DIVISION DIRECTOR FINDS THAT:

The operator has filed an application with analytical results of existing formation fluids along with analytical results for the proposed new sources of produced waters. Notification under the provisions of 19.15.26.8B. NMAC was not required since this is a minor modification to the existing administrative order. The operator has identified a mixture of produced water from the Fruitland Coal, Pictured Cliffs, and Mancos formations for inject. All sources of produced water are wells operated by XTO Energy, Incorporated.

IT IS THEREFORE ORDERED THAT:

The applicant, XTO Energy (OGRID 5380), is hereby authorized to utilize its Salty Dog Well No. 5 (API 30-045-32900) with a location of 1030 feet from the North line and 1365 feet from the East line, Unit letter B of Section 16, Township 29 North, Range 14 West, NMPM, San Juan County, for disposal of oil field produced water (UIC Class II only) identified in the application into the Entrada formation through perforations from approximately 6514 feet to 6644 feet. Injection will occur through internally coated tubing and a packer set within 100 feet of the permitted interval. This administrative order replaces administrative Order SWD-971-A approved February 8, 2006.

IT IS FURTHER ORDERED THAT:

The operator shall take all steps necessary to ensure that the disposed water enters only the approved disposal interval and is not permitted to escape to other formations or onto the surface.

After installing tubing, the casing-tubing annulus shall be loaded with an inert fluid and equipped with a pressure gauge or an approved leak detection device in order to determine

leakage in the casing, tubing, or packer. The casing shall be pressure tested from the surface to the packer setting depth to assure casing integrity.

The well shall pass an initial mechanical integrity test ("MIT") prior to initially commencing disposal and prior to resuming disposal each time the disposal packer is unseated. All MIT testing procedures and schedules shall follow the requirements in Division Rule 19.15.26.11A. NMAC. The Division Director retains the right to require at any time wireline verification of completion and packer setting depths in this well.

The wellhead injection pressure on the well shall be limited to **no more than 2000 psig**. This maximum wellhead pressure was approved in administrative Order SWD-971-A following the Step-Rate Test conducted on December 17, 2005. In addition, the disposal well or system shall be equipped with a pressure limiting device in workable condition which shall, at all times, limit surface tubing pressure to the maximum allowable pressure for this well.

The Director of the Division may authorize an increase in tubing pressure upon a proper showing by the operator of said well that such higher pressure will not result in migration of the disposed fluid from the target formation. Such proper showing shall be demonstrated by sufficient evidence including but not limited to an acceptable Step-Rate Test.

The operator shall notify the supervisor of the Division's district III office of the date and time of the installation of disposal equipment and of any MIT test so that the same may be inspected and witnessed. The operator shall provide written notice of the date of commencement of disposal to the Division's district office. The operator shall submit monthly reports of the disposal operations on Division Form C-115, in accordance with Division Rules 19.15.26.13 and 19.15.7.24 NMAC.

Without limitation on the duties of the operator as provided in Division Rules 19.15.29 and 19.15.30 NMAC, or otherwise, the operator shall immediately notify the Division's district III office of any failure of the tubing, casing or packer in the well, or of any leakage or release of water, oil or gas from around any produced or plugged and abandoned well in the area, and shall take such measures as may be timely and necessary to correct such failure or leakage.

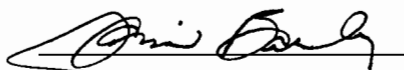

The injection authority granted under this order is not transferable except upon division approval. The division may require the operator to demonstrate mechanical integrity of any injection well that will be transferred prior to approving transfer of authority to inject.

The division may revoke this injection permit after notice and hearing if the operator is in violation of 19.15.5.9 NMAC.

The disposal authority granted herein shall terminate two (2) years after the effective date of this order if the operator has not commenced injection operations into the subject well. One year after the last date of reported disposal into this well, the Division shall consider the well abandoned, and the authority to dispose will terminate *ipso facto*. The Division, upon written request mailed by the operator prior to the termination date, may grant an extension thereof for good cause.

Compliance with this order does not relieve the operator of the obligation to comply with other applicable federal, state or local laws or rules, or to exercise due care for the protection of fresh water, public health and safety and the environment.

Jurisdiction is retained by the Division for the entry of such further orders as may be necessary for the prevention of waste and/or protection of correlative rights or upon failure of the operator to conduct operations (1) to protect fresh or protectable waters or (2) consistent with the requirements in this order, whereupon the Division may, after notice and hearing, terminate the disposal authority granted herein.

JAMI BAILEY
Director
