**Oil measurement**

Each of the wells will be equipped with continuous metering separators for oil production prior to oil being commingled for sales at the Juniper BIP Federal #5. Total sales/production will be allocated back to each individual well using the metered (daily well tests) volumes. Metered volumes will be compared to total battery volumes daily and monthly for accuracy.

**Gas measurement**

Total gas production and sales/transferred volumes will be based on measurement at the CDP and allocated back to each well based on EFM daily readings.

The Juniper BIP #5 & 6Y will be measured at the Agave's CDP meter #4551.

The Juniper BIP #8H,9H & 10H will be measured at the Agave's CDP meter #4553.

The purpose of the Surface/Pool Commingle of production is in the interest of conservation, the reduction of environmental impact area, and overall emissions. It will not result in reduced royalty or improper measurement of production. Without approval for utilizing existing batteries on adjacent leases, it will become necessary to built separate facilities for each well.
