C- 108 Item VII Produced Water Analyses

Anteater State SWD #1

Item VII.4- Water Analysis of Source Zone Water

Delaware
Bone Spring
Avalon

Item VII.5- Water Analysis of Disposal Zone Water

Devonian

Water Analyses follow this page.

C- 108 Item VIII

Geologic Information

Anteater State SWD #1

The Devonian consist of carbonates including light colored dolomite and chert intervals interspersed with some tight limestone intervals. Several thick sections of porous dolomite capable of taking water are believed present within the subject formations in the area. Depth control data was inferred from deep wells to the south and east. If the base of Devonian come in as expected the well will only be drilled deep enough for adequate logging rathole.

At a proposed injection interval of 17,755 -19,030' BGL (Below Ground Level) the well will TD at approximately 19,030'. Mud logging through the interval will ensure the target interval remains in Devonian, Fusselman and Montoya. Once Devonian is determined, the casing shoe depth will be set at an approximate maximum upper depth of 17,755 BGL. Injection will occur through the resulting openhole interval. Should mud or other logs indicate depth adjustment is required to exploit the desired formation as described; sundries with appropriate data will be filed with the OCD.

The Devonian is overlain by the Woodford, Mississippian LM, Barnett and by the Morrow Lower and Morrow Clastics.

Fresh water in the area is generally available from the Rustler formation and some alluvial deposits. State Engineer's records show water wells in a 5 mile radius with a depth to groundwater of 200- 400 feet.

There are no water wells located within one mile of the proposed SWD.

SOLARIS WATER MIDSTREAM, LLC

T/Montoya	19,200'	-15,536
T/Simpson	19,725'	-16,061
T/Ellenburger	20,375'	-16,711

Tops picked in part using the Getty #1HNG St. in Section 4-T24S-R33E, and other e-logs, scouts, and GeoMap tops.

Overlying Oil & Gas Zones:

Bell Canyon (5,200')

Cherry Canyon (6,350')

Brushy Canyon (7,500')

1st BS Sand (10,225')

2nd BS Sand (10,875')

3rd BS Sand (11,925')

Wolfcamp (13,125')

Strawn (14,150')

Atoka (14,400')

Morrow (14,950')

Underlying Oil & Gas Zones:

None

The proposed injection intervals include the formations below the top of the Devonian. The highly cemented carbonates of the Devonian and deeper will provide favorable open hole integrity which to inject salt water without concern of the open hole section collapsing.

C- 108 Item VIII & XI

Groundwater Basins- Water Column/ Depth to Groundwater

Water Wells in AOR

Anteater State SWD #1 Water Well Map

The subject well is located within the Carlsbad Basin.

Fresh water in the area is generally available from valley and basin fill of the Carlsbad-Pecos segment of the lower Pecos Valley complex of Quaternary alluvial sand and gravel deposits. State Engineer's records show water wells in surrounding area with an average depth to water at 300 ft.

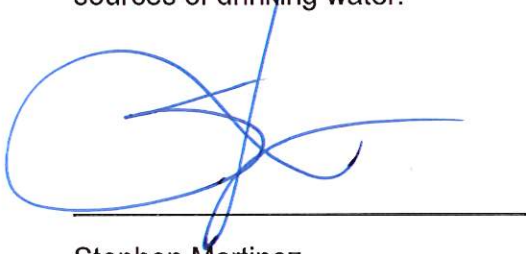

There are no water wells located within one mile of the proposed SWD.

C- 108 Item XII
Geologic Affirmation

Anteater State SWD #1

GEOLOGIC AFFIRMATION

I have examined available geologic and engineering data and have found no evidence of open faults or other hydrologic connection between the disposal interval and underground sources of drinking water.

NOTIFICATION TO INTERESTED PARTIES

Via U.S. Certified Mail- Return Receipt Requested

To whom it may concern,

Solaris Water Midstream, LLC, Midland, Texas, has made an application to the New Mexico Oil Conservation Division to drill and complete, for salt water disposal, the Anteater State SWD No. 1. The proposed commercial operation will be for produced water disposal from area operators. As indicated in the notice below, the well is located in Section 2, Township 24 South, Range 33 East in Lea County, New Mexico.

The published notice states that the interval will be from 17,755 feet to 19,030 feet into the Devonian and Fusselman Formations.

Following is the notice to be published in the Hobbs News Sun, Hobbs, New Mexico on or about July 5th, 2019.

LEGAL NOTICE

Solaris Water Midstream, LLC, 907 Tradewinds Blvd., Suite B, Midland, TX 79706 filed Form C-108 (Application for Authorization to Inject) with the New Mexico Oil Conservation Division seeking administrative approval for a salt water disposal well. The proposed well, the Anteater State SWD No. 1 will be located 1550 feet from the North line and 550 feet from the East line, Section 5, Township 24 South, Range 33 East, Lea County, New Mexico. Produced water from area production will be commercially disposed into the Devonian and Fusselman Formations at a depth of 17,755 feet to 19,030 feet at a maximum surface pressure of 3,551 psi and an average injection rate of 40,000 barrels per day. (Final completion depths may be adjusted per mudlogging and reported to the NMOCD on form C-105; pressure will remain at the standard gradient of 0.2 psi/ft of the uppermost injection interval depth). The proposed SWD well is located approximately 28 miles East of Malaga, NM.

Interested parties wishing to object to the proposed application must file with the New Mexico Oil Conservation Division, 1220 S. St. Francis Dr., Santa Fe, NM 87505 (505) 476-3460 within 15 days of the date of this notice. Additional information may be obtained from the applicant's agent, Gavilan Solutions, LLC, 505-360-9819 or email: awhite@gavilansolutions.com.

You have been identified as a party who may be interested as an offset lessee or operator.

You are entitled to a full copy of the application. A full copy in PDF format is available for immediate download with the link below.

URL Link: <https://www.dropbox.com/sh/wz46b9n0070uu13/AACevIGFQkyV5C02MW5XXq1ia?dl=0>

You may also receive a copy by emailing awhite@gavilansolutions.com with your request Please use a subject like Anteater State SWD #1 request.

Thank you for your attention to this matter.

A handwritten signature in blue ink, appearing to read "Whitney McKee", with a stylized flourish at the end.
