**Attachments:** WilliamsBattery\_C141\_091711 Final.pdf

Mike,

Attached is the Final C-141 for this release. The analytical results and site diagram were given to you on 2/1/2012 when I came to your office to discuss Yates' proposal for this release. Should you need anything else, please let me know.

Thanks,

### Amber Cannon

**Subject:** Williams 8 Battery Release

Amber,

Thank you for meeting with me to discuss remedial options for the 9/16/2011 release at this site (2RP-907). Having discussed the site with Glenn VonGonten and the Santa Fe environmental group, OCD will approve closure for this release. Yates Petroleum will continue to work with the Santa Fe Environmental Bureau on the abatement plan that is in place.

Impacted soils from the release have been excavated and disposed of at an NMOCD approved facility. Vertical delineation samples were taken at the site and the results were elevated chloride levels. After talking about the site with Jerry Fanning, it was determined that the elevated chlorides were in place before the release occurred, represented in the abatement plan for this location. These elevated chlorides are a result of an old pit that was at the location. These elevated chlorides are covered under an abatement plan that is currently in place. Yates Petroleum Corporation will continue to work with the Santa Fe Environmental Bureau on the abatement plan. Yates Petroleum requests closure of this release.
