Mike,

My apologies for this delays in this project being completed in a more timely manner, per our November 29, 2011 meeting Yates will have a contractor excavate an additional two (2) feet of impacted soils from the west side of the production pad, six (6) inches from the production pad and three (3) feet of impacted soils on the east side of the production pad. All impacted soils will be taken to an NMOCD approved facility. When a contractor is scheduled and work is complete the areas will be backfilled with clean soils and Yates will submit a Form C-141 Final report requesting closure.

Thank you.

Robert Asher
