Subject: Alamo Permian - Empire J Federal #3 well Site - Remediation Notification, Eddy County, NM

James and Mike,

Tetra Tech is preparing to start the soil remediation at the Alamo Empire J Federal #3 Well Site on Thursday (9-8-11). As discussed onsite with the BLM, the location of the spill has access and safety concerns and the impacted soil will be removed using a trackhoe. All the excavated soil will be hauled to proper disposal. Once excavated, confirmation samples will be collected from the area. As requested by the BLM, the excavated areas will be dressed and seeded to properly restore the site, including runoff controls (berms). Tetra Tech will also notify you during each phase of the remediation project. Let me know if you need additional information, thanks

James and Mike,

Please find the enclosed data and plats on the sampling performed at the Alamo -Empire J Federal #3 located in Eddy County, NM. Referring to Table 1, majority of the impacted areas were not vertically defined and deeper samples could not be collected due to the dense formation. Southern NM Archaeological Service, Inc (SNMA) has completed the survey and found not arch sites in vicinity of the spill area. The arch survey report has been forward to the BLM for review. Based on the site location, we would like to setup an onsite meeting (Tuesday 8-30-11) to inspect spill area, evaluate access and discuss remedial options for the site. Please let me know if you have any questions or need additional information. Let me know on the onsite meeting, thanks
