San Juan 30-5 #60 Mesaverde Subtraction Allocation

Based on the most recent MV production, it is recommended to assign the following average daily volumes to the MV formation for the 36 months of production following the recompletion. Following the rig work, all other production above this volume should be given to the **Picture Cliffs**. After the allocation runs out, engineering will convert to a ratio allocation method.

(Condensate production should be allocated 100% to the Picture Cliffs)
