Administrative Order SWD-1378-B  
June 17, 2013

**ADMINISTRATIVE ORDER  
OF THE OIL CONSERVATION DIVISION**

Pursuant to the provisions of 19.15.26.8B NMAC, Apache Corp. seeks an order to amend administrative Order SWD-1378-A to utilize its proposed Geronimo 28 State SWD Well No. 2 (**API No. 30-015-40876**) located 2135 feet from the South line and 690 feet from the East line, Unit letter I of Section 28, Township 17 South, Range 28 East, NMPM, Eddy County, New Mexico, for produced water disposal purposes. The amendment involves changing the original proposed injection interval from the Devonian and Ellenburger formations (**approximate depths of 11,404 feet to 12,500 feet**) to the Wolfcamp and Cisco formations (**approximate depths of 7,176 feet to 9,150 feet**). This well has been drilled to a total depth of 9,500 feet.

**THE DIVISION DIRECTOR FINDS THAT:**

The application has been duly filed under the provisions of 19.15.26.8B NMAC and satisfactory information has been provided that affected parties as defined in said rule have been notified and no objections have been received within the prescribed waiting period. The applicant has presented satisfactory evidence that all requirements prescribed in 19.15.26.8 NMAC have been met and the operator is in compliance with 19.15.5.9 NMAC.

**IT IS THEREFORE ORDERED THAT:**

The applicant, Apache Corp., is hereby authorized to utilize its proposed Geronimo 28 State SWD Well No. 2 (**API No. 30-015-40876**) located 2135 feet from the South line and 690 feet from the East line, Unit letter I of Section 28, Township 17 South, Range 28 East, NMPM, Eddy County, New Mexico, for disposal of oil field produced water into the Wolfcamp and Cisco formations through perforations from approximately 7,176 feet to 9,150 feet through internally coated tubing and a packer set within 100 feet of the permitted interval.

**Before commencing injection operations into the injection well, the operator shall run a Cement Bond Log (CBL) in the injection well to determine the exact top of cement (TOC) on the production casing. If the indicated cement top is deeper than 3,000 feet, the operator shall bring the cement top to 3,000 feet. The operator shall notify the Division's district II office of the date and time when this work is to be done so that it can be witnessed and approved before commencing injection operations into this well.**

IT IS FURTHER ORDERED THAT:

The operator shall take all steps necessary to ensure that the disposed water enters only the approved disposal interval and is not permitted to escape to other formations or onto the surface.

After installing tubing, the casing-tubing annulus shall be loaded with an inert fluid and equipped with a pressure gauge or an approved leak detection device in order to determine leakage in the casing, tubing, or packer. The casing shall be pressure tested from the surface to the packer setting depth to assure casing integrity.

The well shall pass an initial mechanical integrity test ("MIT") prior to initially commencing disposal and prior to resuming disposal each time the disposal packer is unseated. All MIT testing procedures and schedules shall follow the requirements in Division Rule 19.15.26.11A. NMAC. The Division Director retains the right to require at any time wire-line verification of completion and packer setting depths in this well.

The wellhead injection pressure on the well shall be limited to no more than **1435** psi. In addition, the disposal well or system shall be equipped with a pressure limiting device in workable condition which shall, at all times, limit surface tubing pressure to the maximum allowable pressure for this well.

The Director of the Division may authorize an increase in tubing pressure upon a proper showing by the operator of said well that such higher pressure will not result in migration of the disposed fluid from the target formation. Such proper showing shall be demonstrated by sufficient evidence including but not limited to an acceptable Step-Rate-Test.

The operator shall notify the supervisor of the Division's district II office of the date and time of the installation of disposal equipment and of any MIT test so that the same may be inspected and witnessed. The operator shall provide written notice of the date of commencement of disposal to the Division's district II office. The operator shall submit monthly reports of the disposal operations on Division Form C-115, in accordance with Division Rules 19.15.26.13 and 19.15.7.24 NMAC.

Without limitation on the duties of the operator as provided in Division Rules 19.15.29 and 19.15.30 NMAC, or otherwise, the operator shall immediately notify the Division's district II office of any failure of the tubing, casing or packer in the well, or of any leakage or release of water, oil or gas from around any produced or plugged and abandoned well in the area, and shall take such measures as may be timely and necessary to correct such failure or leakage.

The injection authority granted under this order is not transferable except upon division approval. The division may require the operator to demonstrate mechanical integrity of any injection well that will be transferred prior to approving transfer of authority to inject.

The division may revoke this injection permit after notice and hearing if the operator is in violation of 19.15.5.9 NMAC.

The disposal authority granted herein shall terminate two years after the effective date of this order if the operator has not commenced injection operations into the subject well. One year

June 17, 2013

after the last date of reported disposal into this well, the Division shall consider the well abandoned, and the authority to inject will terminate **ipso facto**. The Division, upon written request mailed by the operator prior to the termination date, may grant an extension thereof for good cause.

Compliance with this order does not relieve the operator of the obligation to comply with other applicable federal, state or local laws or rules, or to exercise due care for the protection of fresh water, public health and safety and the environment.

Jurisdiction is retained by the Division for the entry of such further orders as may be necessary for the prevention of waste and/or protection of correlative rights or upon failure of the operator to conduct operations (1) to protect fresh or protectable waters or (2) consistent with the requirements in this order, whereupon the Division may, after notice and hearing, terminate the disposal authority granted herein.

  
JAMI BAILEY
