Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse:	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* A 6-inch steel flow line was found to be leaking due to corrosion causing a release of 73 barrels of produced water. A vac truck was immediately called to the location and recovered 20 barrels. The flow line was isolated, drained of all fluids, replaced and returned to service. Talon/LPE was contacted to complete the site assessment to determine appropriate clean up actions.

Describe Area Affected and Cleanup Action Taken.* Oxy conducted some initial remediation. The impacted area was inside the berm of the facility. 3 barrels flowed outside the facility measuring approximately 6'x8". Once laboratory results are available Talon will submit a detailed work plan.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that poses a threat to ground water, surface water, human or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of liability for compliance with any other federal, state, or local laws and/or regulations.
