Describe Cause of Problem and Remedial Action Taken.\* The fiberglass injection line ruptured, cause unknown. The line segment was isolated, and the damaged section of line was replaced.

Describe Area Affected and Cleanup Action Taken.\* Approximately 23,224 sq. ft. of pasture and approximately 7,888 sq.ft. of well pad and road were impacted by the release. All of the free standing fluid was recovered with a vacuum truck. The area was surveyed with a GPS, and the data was given to the BLM. Permission to start removing contamination was received at 2:00 p.m. on 1/14/14. Remediation activities conducted at the PLU-188Y release site met the objectives set forth by the NMOCD and BLM. Impacted soil was excavated to the maximum extent practicable, given the presence of numerous active and high-pressure pipelines. As per the NMOCD, a 20-millimeter polyurethane liner was installed in the floor of Excavation #3 at approximately four feet (4') bgs. This engineering control was designed to inhibit the vertical migration of contaminants left in-situ. Please reference the attached *Remediation Summary and Risk-Based Site Closure Request* for remediation details.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
