If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*  
The collar around an 8" fiberglass water line separated causing an estimated 1560 bbls of produced water to be released.

Describe Area Affected and Cleanup Action Taken.\*  
The lease operator discovered the leak causing an estimated 1560 bbls of produced water to be released outside of location and onto pasture, the north side of the north west corner. Approximately 30 bbls of produced water was recovered. The well was shut in and all lines coming to the SWD were shut off. All necessary parties were notified. The water line was repaired.

The impacted area was excavated to a depth of 4 feet deep and a 20 mil liner was installed. The contaminate soil was transported to Lea Land LLC, an approved disposal facility.

The excavated area was backfilled with clean sand that was obtained by the owner and placed on top of the liner. The area was contoured to match the surrounding location and seeded with BLM #2 seed mix for sand soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
