1/4" valve on pumping tee was opened by cattle rubbing against it. Valve handle has been removed. Vacuum trucks were called in to recover standing fluids.

Describe Area Affected and Cleanup Action Taken.\*

The leak affected a total area of 3,602 square feet including the well pad and 582 square feet of pasture land. Samples were collected and sent to a commercial lab for chloride and TPH analyses. The well pad leak area was excavated to 1.5 ft. and the pasture leak area was excavated to 1 ft. Impacted soils were removed to a NMOCD approved disposal facility. The well pad leak area was backfilled with clean imported caliche and leveled. The pasture excavation was backfilled with clean imported soil and contoured to the surrounding area.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
