If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*

The steel flow line was found by a Linn Energy pumper. Leak was due to corrosion. The standing fluid was recovered by a vacuum truck. Location was back-dragged until one-call was made and cleared.

Describe Area Affected and Cleanup Action Taken.\*

The leak affected a total area of 4,366 square feet including a lease road and 1,275 square feet of pasture land. Samples were collected and sent to a commercial lab for chloride and TPH analyses. The leak was excavated and impacted soils were removed to a NMOCD approved disposal facility. The excavation in the pasture was backfilled with clean imported topsoil and contoured to the surrounding area. The excavation in the lease road was backfilled with clean imported caliche and leveled.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
