All,

Here is the field data that was gathered from the discussed spill areas on the Gissler A-2 TB. The samples will be taken to the lab, and once we have the analytical in hand we can discuss how we are wanting to proceed. It looks like we will only have to remove approximately 6" of material in the pasture to the south of the facility (SP-1 & SP-2). The area where the equipment is will be a little deeper (SP-3 & SP-4). We hit refusal at 6' in the area of SP-2, so we may have to further delineate. The area of SP-4 looks to clean up around 4' below surface, and we hit refusal at 6' in this area as well. Again, once we have the analytical, we can make a better decision on how to proceed. If there are any questions or concerns, feel free to contact us. Thanks.
