Subject: RE: Work Plan for Belco #1 Spill

Lyn,

In reviewing the delineation proposal, I noticed that sample points denoted as AH-4 and AH-5 were not included in the proposed investigation. While these two sample points did show some decline in chloride constituents, OCD will require the delineation of this site to be performed in such a manner as to show where contaminants clean up. For chlorides, target number for delineation purposes will be 250 mg/kg or natural background, whichever is greater. The delineation should include a vertical as well as horizontal investigation of contaminants that may present at this site. Also, I will request that samples be obtained from a minimum of three sample points (obtained at sufficient depth to be below the material used as backfill) in the area where the tanks were situated at the time of the lightning strike. The sample points should be selected in a manner that will sufficiently represent the area in which the tanks were located, for example, divide the area in thirds and obtain samples from the center of each division.

Please review my letter dated August 11, 2009, sent to your Carlsbad office (attention Jerry Hanway), for guidance in what OCD requires for remediation proposals.

If you have any questions or concerns, please contact me.

Mike,

Attached is the work plan I have put together with Tetra-Tech on the additional work we discussed in your office last week. Please review and give me a call on my cell should you have any questions.
