Mike,

Yes we are still planning on performing the soil removal and placing a liner in the vicinity of BH-2.

Jeff,

Please advise when you have scheduled the installation of the monitor wells. In reviewing the work plan (dated May 4, 2010) it was proposed to excavate and remove soils from specific areas at the site. Are you still planning on performing this soil removal?

Mike

Subject: Basic Energy Services Belco Saltwater Disposal #1

Mike,

As per your meeting with Ike Tavaréz of Tetra Tech on Friday, June 4, 2010, Basic Energy proposes to install two temporary monitor wells at the site (one in the vicinity of auger hole AH-4 [source area], and a second to the southwest of the facility [background well]) and sample the groundwater for chlorides. It is Basic's understanding that the NMOCD has requested the temporary wells be installed and that data gathered from the two wells be evaluated and submitted to the NMOCD prior to any soils being remediated onsite. Upon completion of the sampling, an additional workplan will be submitted to the NMOCD should groundwater be found to be impacted with chlorides which exceed background levels.

If you have any questions or comments, please feel free to contact either myself or Ike Tavaréz at (432) 682-4559.

Subject: Re: Basic Belco and Myrtle Myra

Gentlemen,

I was able to line up drillers for Thursday, June 17, 2010 to install the two temporary 2" monitor wells located at the Basic Belco facility. Once the two wells are installed, sampled and the analysis received and evaluated, Basic would like to proceed with the completion of the remediation of the soils at the site.

Since we will have the rig available, once we have completed the installation of the two monitor wells at Belco, we would like to complete the one boring for chloride sampling at the Myrtle Myra. Once we complete the drilling and sampling for chlorides at the Myrtle Myra, the original workplan will be rewritten and submitted to the NMOCD to include the newly acquired data.

If you have any questions in regards to the proposed work and schedule, please do not hesitate to contact either myself or Tim Reed at (432) 682-4559.

Thanks,

Jeffrey Kindley, PG | Senior Environmental Geologist
