If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
A lightning strike caused the fiberglass tank battery facility to ignite and burn to the ground. We are in the process of investigating possible grounding solutions for these facilities, including copper wire grounding into the freshwater aquifer.

Describe Area Affected and Cleanup Action Taken.*
The entire facility was cleaned, removed, and taken to an OCD approved land farm for remediation. The affected soil was removed and taken to the same facility. Fresh caliche was hauled in and spread over the area. The tank battery was reconstructed and set on a 20 ml polyethylene liner. Earthen berms were built around the tank battery and covered with the liner.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
