Re: 2011 Notification of Annual Sump Inspections, Transwestern Pipeline Company

Dear Mr. Lowe:

By this letter, Transwestern Pipeline Company is providing written notification to the Oil Conservation Division that the annual sump inspections will be completed for the following facilities by April 15, 2011:

San Juan Compressor Station	(GW-084)
Bisti Compressor Station	(GW-285)
Thoreau Compressor Station	(GW-080)
Mountainair Compressor Station	(GW-110)
Corona Compressor Station	(GW-089)
Roswell Compressor Station	(GW-052)
Monument Compressor station	(GW-197)
Gallup Compressor Station	(GW-325)

Submittal of this letter complies with the notification requirements presented in each facilities Discharge Plan.

Should your agency require additional information concerning this written notification, contact the undersigned at our Roswell Technical Operations office at (575) 625-8022.

Sincerely,

Larry Campbell

PUBLIC NOTICE

Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201, has submitted a renewal application to the New Mexico Energy, Minerals and Natural Resources Department, Oil Conservation Division for the previously approved discharge plan (GW-285) for their Bisti Compressor Station located in Section 19, Township 24 North, Range 13 West NMPM, San Juan County, New Mexico. The physical location of this remote facility is on highway 371 approximately 25 miles South of Farmington, New Mexico. The mailing address of the facility is P.O. Box 399, Bloomfield, New Mexico, 87413.

Materials generated or used at the facility include pipeline condensate, liquid generated from the removal of entrained liquids in the natural gas stream, new and used compressor lubrication oil generated during the operation of the engine compressors, gear oil and oily waste water from engine or scrubber wash down. The wash down water amounts to approximately 5 gallons per week. All liquids utilized at the facility are stored in dedicated above ground storage tanks prior to offsite disposal or recycling at an OCD approved site. All storage tanks are within properly engineered and OCD approved secondary containments. No onsite discharges are intentionally allowed to contact or enter surface or groundwater. The volume of discharges is zero and therefore, the quality of the discharges is not applicable. The aquifer most likely to be affected is approximately 10 feet in depth, and the total dissolved solids concentration of this aquifer is approximately 1545 mg/l.

Any interested person or persons may obtain information, submit comments or request to be placed on a facility-specific mailing list for future notices by contacting Leonard Lowe at the New Mexico OCD at 1220 South St. Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3492. The OCD will accept comments and statements of interest regarding the renewal and will create a facility-specific mailing list for persons who wish to receive future notices.

AVISO PUBLICO

La empresa Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201, ha presentado ante la Oil Conservation Division (División de Conservación del Petróleo, OCD por su sigla en inglés) del New Mexico Energy, Minerals and Natural Resources Department (Departamento de Energía, Minerales y Recursos Naturales de Nuevo México) una solicitud para la renovación del plan de descarga (GW-285), anteriormente aprobado, para su estación compradora Bisti Compressor Station, ubicada en la Sección 19, Distrito Municipal (Township) 24 Norte, Zona (Range) 13 Oeste NMPM, Condado de San Juan, Nuevo México. A la ubicación física de estas instalaciones remotas se llega por la carretera 371, aproximadamente 25 millas al sur de Farmington, Nuevo México. La dirección postal de las instalaciones es P.O. Box 399, Bloomfield, New Mexico, 87413.

Los materiales generados o usados en las instalaciones incluyen condensado de las tuberías, líquido generado durante la eliminación de líquidos arrastrados por el flujo del gas natural, aceite lubricante para compresores nuevo y usado generado durante el funcionamiento de los compresores de motores, aceite para engranajes y agua aceitosa residual del lavado de motores o depuradores. El agua de lavado asciende a aproximadamente 5 galones por semana. Todos los líquidos utilizados en las instalaciones son almacenados en tanques de almacenamiento para tal fin, sobre la superficie del suelo, antes de su disposición final fuera de las instalaciones o de su reciclaje en instalaciones aprobadas por la OCD. Todos los tanques de almacenamiento están diseñados de manera adecuada y aprobados por la OCD para contención secundaria. No se permite que, de manera intencional, las descargas en el lugar tengan contacto con aguas superficiales o subterráneas ni que ingresen en ellas. El volumen de las descargas es cero y, por lo tanto, la calidad de las descargas no es pertinente. El acuífero con mayor probabilidad de ser afectado tiene una profundidad de aproximadamente 10 pies y la concentración de sólidos disueltos totales en dicho acuífero es de aproximadamente 1545 mg/l.

Los interesados en obtener información, presentar comentarios o solicitar su inclusión en una lista de correo para recibir notificaciones futuras sobre instalaciones específicas de berán comunicarse con Leonard Lowe, New Mexico OCD, 1220 South St. Francis Drive, Santa Fe, New Mexico 87505, teléfono (505) 476-3492. La OCD aceptará comentarios y declaraciones de interés con respecto a la renovación y creará una lista de correo para las personas que deseen recibir futuras notificaciones relativas a instalaciones específicas.

NOTICE OF PUBLICATION

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20.6.2.3106 NMAC), the following discharge permit application(s) has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOCD"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-285) Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201 has submitted a renewal application for the previously approved discharge plan for their Bisti Compressor Station located in Section 19, Township 24 North, Range 13 West NMPM, San Juan County, New Mexico. The station is located on highway 371 approximately 25 miles south of Farmington, New Mexico. Materials generated or used at the facility include pipeline condensate liquid, new and used compressor lubrication oil, gear oil, and oily waste water from engine or scrubber wash down. The wash down water amounts to approximately 5 gallons per week. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 10 feet, with a total dissolved solids concentration of approximately 1545 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

The NMOCD has determined that the application is administratively complete and has prepared a draft permit. The NMOCD will accept comments and statements of interest regarding this application and will create a facility-specific mailing list for persons who wish to receive future notices. Persons interested in obtaining further information, submitting comments or requesting to be on a facility-specific mailing list for future notices may contact the Environmental Bureau Chief of the Oil Conservation Division at the address given above. The administrative completeness determination and draft permit may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday, or may also be viewed at the NMOCD web site <http://www.emnrd.state.nm.us/ocd/>. Persons interested in obtaining a copy of the application and draft permit may contact the NMOCD at the address given above. Prior to ruling on any proposed discharge permit or major modification, the Director shall allow a period of at least thirty (30) days after the date of publication of this notice, during which interested persons may submit comments or request that NMOCD hold a public hearing. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines that there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed permit based on information available, including all comments received. If a public hearing is held, the director will approve or disapprove the proposed permit based on information in the permit application and information submitted at the hearing.

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations (20:6.2.3106 NMOC), the following discharge permit application(s) has been submitted to the Director of the New Mexico Oil Conservation Division ("NMOC"), 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505. Telephone (505) 476-3440:

(GW-095) Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201 has submitted a renewal application for the previously approved discharge plan for their Laguna Compressor Station located in the SE of Section 7 and the NE of Section 18, Township 9 north, Range 5 west in Cibola County, New Mexico. The station is located 1.5 miles south of the town of Laguna. Materials generated or used at the facility include pipeline condensate liquid, new and used compressor lubrication oil, gear oil, and oily waste water from engine or scrubber wash down. The wash down water amounts to approximately 25 gallons per week. The volume of pipeline condensate generated at the facility is approximately 10 gallons per week. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 14 feet, with a total dissolved solids concentration of approximately 1118 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-109) Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201 has submitted a renewal application for the previously approved discharge plan for their Carlsbad (Wt-1) Compressor Station located in the NW of Section 18, Township 20 South, Range 32 East NMPM, Lea County, New Mexico. The station is located on highway 62-180 approximately 29 miles east of Carlsbad, New Mexico. Materials generated or used at the facility include pipeline condensate liquid, new and used compressor lubrication oil, gear oil, and oily waste water from engine or scrubber wash down. The wash down water amounts to approximately 25 gallons per week. The volume of pipeline condensate generated at the facility is approximately 10 gallons per week. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 50 feet, with a total dissolved solids concentration of approximately 1900 mg/l. The discharge

plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-285) Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201 has submitted a renewal application for the previously approved discharge plan for their Bisti Compressor Station located in Section 19, Township 24 North, Range 13 West NMPM, San Juan County, New Mexico. The station is located on highway 371 approximately 25 miles south of Farmington, New Mexico. Materials generated or used at the facility include pipeline condensate liquid, new and used compressor lubrication oil, gear oil, and oily waste water from engine or scrubber wash down. The wash down water

amounts to approximately 5 gallons per week. Groundwater most likely to be affected by a spill, leak or accidental discharge is at a depth of approximately 10 feet, with a total dissolved solids concentration of approximately 1545 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

The NMOC has determined that the application is administratively complete and has prepared a draft permit. The NMOC will accept comments and statements of interest regarding this application and will create a facility-specific mailing list for persons who wish to receive future notices. Persons interested in obtaining further information, submitting comments or requesting to be on a facility-specific mailing list for future notices may contact the Environmental Bureau Chief of the Oil Conservation Division at the address given above. Mr. Wayne Price, Bureau Chief
New Mexico Oil Conservation Division
1220 South St. Francis
Santa Fe, New Mexico 87505

Re: Transwestern Pipeline Company, Bisti Compressor Station, Renewal of Discharge
Plan GW-285, San Juan County, New Mexico

Dear Mr. Price:

The ground water discharge plan GW-285 for the Transwestern Pipeline Company's Bisti Compressor Station expires on September 24, 2007 and requires renewal. The location of the facility is in Section 19, Township 24 North, Range 13 West NMPM, San Juan County, New Mexico. There have been no process or construction changes at the facility since your agency issued the last plan on July 22, 2002. Therefore, Transwestern respectfully requests renewal of this plan based on the information contained in the original plan submittal.

A draft copy of the public notice in English and Spanish accompanies this discharge plan renewal request. Transwestern proposes to do public notice of each in the *Farmington Daily Times*, the newspaper of general circulation.

Transwestern is requesting written approval of the attached public notices and choice of newspaper as stated above. Should you have any questions or require any additional information concerning this renewal request, contact the undersigned at our Roswell Technical Operations office. Thank you very much for your assistance in this matter.

Sincerely,

Larry Campbell
Division Environmental Specialist

AVISO PÚBLICO

La empresa Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201, ha presentado ante la Oil Conservation Division (División de Conservación del Petróleo, OCD por su sigla en inglés) del New Mexico Energy, Minerals and Natural Resources Department (Departamento de Energía, Minerales y Recursos Naturales de Nuevo México) una solicitud para la renovación del plan de descarga (GW-285) anteriormente aprobado, para su estación compresora Bisti Compressor Station ubicada en la Sección 19, Distrito Municipal (*Township*) 24 Norte, Zona (*Range*) 13 Oeste NMPM, condado de San Juan, Nuevo México. A la ubicación física de estas instalaciones remotas se llega por la carretera 371, aproximadamente 25 millas al sur de Farmington, Nuevo México. La dirección postal de las instalaciones es P.O. Box 399, Bloomfield, New Mexico, 87413.

Los materiales generados o usados en las instalaciones incluyen líquido de condensación de las tuberías, aceite lubricante para compresores nuevo y usado, aceite para engranajes y agua aceitosa residual del lavado de motores o depuradores. El agua de lavado asciende a aproximadamente 5 galones por semana. Todos los líquidos utilizados en las instalaciones son almacenados en tanques de almacenamiento para tal fin, sobre la superficie del suelo, antes de su disposición final fuera de las instalaciones o de su reciclaje en instalaciones aprobadas por la OCD. Todos los tanques de almacenamiento están diseñados de manera adecuada y aprobados por la OCD para contención secundaria. No se permite que, de manera intencional, las descargas en el lugar tengan contacto con aguas superficiales o subterráneas ni que ingresen en ellas. El volumen de descarga es cero y, por lo tanto, la calidad de las descargas en este caso no es pertinente. El acuífero con mayor probabilidad de ser afectado se encuentra a una profundidad de aproximadamente 200 pies y la concentración de sólidos disueltos totales en dicho acuífero es de aproximadamente 4500 mg/l.

Los interesados en obtener información, presentar comentarios o solicitar su inclusión en una lista de correo para recibir notificaciones futuras sobre instalaciones específicas deberán comunicarse con Brad Jones, New Mexico OCD, 1220 South St. Francis Drive, Santa Fe, New Mexico 87505, teléfono (505) 476-3487. La OCD aceptará comentarios y declaraciones de interés con respecto a la renovación y creará una lista de correo para las personas que deseen recibir notificaciones futuras relativas a instalaciones específicas.

PUBLIC NOTICE

①
①
Transwestern Pipeline Company, 6381 North Main Street, Roswell, New Mexico 88201, has submitted a renewal application to the New Mexico Energy, Minerals and Natural Resources Department, Oil Conservation Division for the previously approved discharge plan (GW-285) for their Bisti Compressor Station located in Section 19, Township 24 ② North, Range 13 West NMPM, San Juan County, New Mexico. The physical location of this remote facility is on highway 371 approximately 25 miles South of Farmington, New Mexico. The mailing address of the facility is P.O. Box 399, Bloomfield, New Mexico, 87413.

3 Need a brief description that uses the information stated below
Materials generated or used at the facility include pipeline condensate liquid, new and used compressor lubrication oil, gear oil and oily waste water from engine or scrubber wash down. The wash down water amounts to approximately 5 gallons per week. All liquids utilized at the facility are stored in dedicated above ground storage tanks prior to offsite disposal or recycling at an OCD approved site. All storage tanks are within properly engineered and OCD approved secondary containments. No onsite discharges are intentionally allowed to contact or enter surface or groundwater. The volume of discharges is zero and therefore, the quality of the discharges is not applicable. The aquifer most likely to be affected is approximately 200 feet in depth, and the total dissolved solids concentration of this aquifer is approximately 4500 mg/l. ④
⑤

Any interested person or persons may obtain information, submit comments or request to be placed on a facility-specific mailing list for future notices by contacting ~~Brad Jones~~ ⑥ Leonard Lowe at the New Mexico OCD at 1220 South St. Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3487. The OCD will accept comments and statements of interest regarding the renewal and will create a facility-specific mailing list for persons who wish to receive future notices. ⑦
