**OIL CONSERVATION  
DIVISION**

In regard to the recompletion of the above listed well, please find enclosed the following items.

Form C-107A Application for Downhole Commingling  
Form C-101 Application for Permit to Drill, Re-enter, Deepen, Plugback, or Add a Zone  
Wellbore Schematics for Current and Proposed Completion  
Copy of Form C-102 Well Location and Acreage Dedication Plat  
Production Curve for each zone.

We plan to add Atoka perforations and additional Morrow perforations to the existing wellbore. The spacing unit and acreage dedication is the same for both zones. The production estimates for the Morrow are from the existing production and the production estimates from the Atoka are from the Carlsbad #4. The Carlsbad #4 (Section 27, T23S-R26E) is a well Newfield Exploration Mid-Continent Inc. operates in the adjacent 1/4 section that produces from the Atoka. The production curve for the Morrow zone is for seven months as that is the length of time from first sales for the Carlsbad #6 well and the only available data for the Morrow zone.

If you require additional information or have any questions, please contact this office at the above listed number, or you may contact Steve Gillett, Drilling Engineer at 918-582-2690 in Newfield Exploration Mid-Continent Inc.'s Tulsa, Oklahoma office.
