Rio Arriba Co, New Mexico  
API - 30-039-30267

Dear Sir:

This is a request for administrative approval for a non-standard gas well location in the Basin Dakota pool.

The proposed San Juan 27-4 Unit 141B was staked as a commingle Blanco Mesaverde / Basin Dakota well. The placement of this drill block well is non-standard for the Dakota as per Order 10987-B (2).

The reason for staking a non-standard location for the proposed well is the extreme topographic relief with the "legal drilling window". After applying the setback as per Order 10987-B (2) there was only one area to stake a standard location and that was in the NWSW. This area had to be avoided due to existing well. There were two areas outside the standard window where a well location could be constructed. The proposed well location that is furthest from existing production and with the least amount of surface disturbance is the location chosen. See the attached topo and aerial map for further clarification.

Production from the Blanco Mesaverde is included in the 320 W/2 and the Basin Dakota is included in the 320 S/2 acre gas proration unit of Section 15. There is not an NSL issue with the Mesaverde formation since Section 15 and section 22 are in the Mesaverde participating area, however the Dakota is not and because of this the 10 foot offset does not come into effect. To comply with the New Mexico Oil Conservation Division rules, we are submitting the following for your approval of this non-standard location:

1. Approved APD cover page and C102 plat showing location of the well
2. 9 Section Plan showing wells in the area
3. Offset Operator Plat for Section 15 & 22
4. Topo and aerial maps showing the location of the well

Burlington Resources is the Operator of the affected sections, the E/2 of Section 15 and all of Section 22 and the working interest of all three half sections are common therefore no notification was required. Please let me know if you have any questions about this application at 505-326-9518.

Sincerely,

Patsy Clugston
