**HOBBSOCD**

Describe Cause of Problem and Remedial Action Taken.\*  
At approximately 8 am lease operator discovered wellhead leak coming from pinch nipple out of Braden head. On the end of the nipple was a closed gate valve. There was a split in nipple from exterior corrosion. Vacuum trucks were called and picked up free standing water. Backhoe was brought in ASAP and small 5' x 5' x 5' hole was dug to flow water into for containment. Another pit wad dug next to it and Akome pit liners were called and arrived a few hours later. Pit was lined and flow was then diverted to that pit with vacuum trucks continuing to haul.

Describe Area Affected and Cleanup Action Taken.\*  
Water ran across location, into pasture, and down Carter Foundation road for approx. 3/4 mile. BBC International was called in to assist. Samples were taken and a remediation plan was developed and submitted to Chris Williams. Chris Williams approved it on 8/18/08. Remediation activities were commenced and completed on 9/19/08.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
