ATTN: Mr. Glen von Gotten

SUBJECT: **STAGE 1 SITE ABATEMENT REPORT**
GLADIOLA STATION
LEA COUNTY, NEW MEXICO
OCD No. AP038

Dear Mr. von Gotten:

Kleinfelder West, Inc. (Kleinfelder), on behalf of ExxonMobil Environmental Services (EMES), is pleased to submit one electronic and two paper copies of the Stage 1 Abatement Report. This report documents the installation of six monitor wells and two soil borings on April 28-29, 20008. This report also documents the groundwater monitoring and sampling of existing wells (MW-1 through MW-10) on April 15 and the new wells on April 30, 2008. Light Non-Aqueous Phase Liquid (LNAPL) in the form of crude oil was measured in MW-1 through MW-3. The thickness of LNAPL in MW-2 increased from the previously measured 0.12 feet in February 2007 to 6.44 feet in April 2008. The observed LNAPL increase may be potentially related to the May 2007 Centurion pipeline release.

Soil samples collected during drilling activities in April indicated the bottom sample from MW-13, MW-14, MW-15, and all three samples from SB-12 exceeded New Mexico Oil Conservation Division (NMOCD) Recommended Remediation Action Levels (RRALs) for total petroleum hydrocarbons (TPH). Based on April 2008 results, the site not delineated to west with respect to TPH in the soil.

Groundwater samples exceeded New Mexico Water Quality Control Commission (NMWQCC) standards for benzene, ethylbenzene, total xylenes, and total naphthalene. Based on the April 2008 laboratory analytical results, the site is only delineated to the east for benzene, and to the east and south for total naphthalene.

Total metals analysis of groundwater samples was conducted during this event and samples collected from nine of the wells exceeded the dissolved barium NMWQCC standard of 1.0 milligrams per liter (mg/L). Samples from one well (MW-10) exceeded the NMWQCC dissolved chromium concentration of 0.05 mg/L. It is recommended that during the next groundwater sampling event, groundwater samples collected for metals analysis be field filtered with a 0.45-micron filter prior to submittal to the laboratory for analysis of dissolved-phase metals. Kleinfelder recommends the following:

- Quarterly monitoring and sampling in August 2008 of all 16 monitor wells on site, including monitor wells MW-1 through MW-3 that currently contain LNAPL;
- Collection and analysis of dissolved metals concentrations;
- Continued monitoring of the LNAPL and dissolved-phase concentrations in MW-2 and wells downgradient of MW-2 to document the potential impact of the May 2007 Centurion crude oil release; and
- Quarterly report submittal of August monitoring findings.

If you have any questions or need additional information, please contact us at 505-344-7373.

Respectfully submitted,

Jonathan K. Hamilton
Exxon Mobil Environmental Services Company

TABLE OF CONTENTS

LIST OF FIGURES

LIST OF TABLES

LIST OF APPENDICES

1.0 INTRODUCTION

The Gladiola Station crude oil pipeline release site (hereafter referred to as the "Site") is located in eastern Lea County, New Mexico (Figure 1). The legal description of the Site is the SE 1/4 of Section 5, T12S, R38E. The location of the initial release is to the south of Tank # 2857 (Figure 2). The Site consists of approximately 0.54 acres and was operated as a crude oil pipeline pumping station under ExxonMobil Pipeline Company (EMPCo) until its purchase by Trojan Pipeline L.P. (Trojan) in February 2004. Trojan changed their name to Centurion Pipeline L.P. (Centurion) in July 2004. The Site is currently operated by Centurion.

The initial release occurred on November 18, 2002 and was the result of a sump over-flow/bleeder valve leak. A *Leak, Maintenance and Exposed Pipe Report* dated November 18, 2002 indicated the crude oil release consisted of 15 barrels lost and five barrels recovered.

Climate at the Site is semi-arid to arid and topography of the Site and adjoining land gently dips to the southeast with little relief. The Site is surrounded by rangeland with the surface primarily covered by range grasses.

The following sections summarize the soil and groundwater assessment activities. Figures and tables support the summary of findings associated with the assessment activities.

2.0 PREVIOUS SOIL AND GROUNDWATER INVESTIGATION ACTIVITIES

Initial excavations to remove impacted soil were conducted at the Site followed by a soil boring investigation in August 2003. The investigation, conducted by B&H Maintenance and Construction (B&H), was submitted to EMPCo to document total petroleum hydrocarbon (TPH) concentrations at the Site.

BNC Environmental Services (BNC) conducted soil and groundwater assessment activities in 2004 and installed three monitoring wells. Soil hydrocarbon impacts were in excess of New Mexico Oil Conservation Division (NMOCD) regulatory guidelines, and groundwater hydrocarbon impacts were in excess of New Mexico Water Quality Control Commission (NMWQCC) regulatory guidelines in all three monitoring wells. A sensitive receptor survey conducted in 2004 found no water wells located on the Gladiola Station property or land immediately adjacent to the Site.

In 2006, seven new groundwater monitoring wells were installed and two new soil borings were completed by Conestoga-Rovers and Associates (CRA). In addition, a site-wide groundwater monitoring and sampling event was conducted. Soil samples from four of the newly-drilled monitoring wells contained concentrations of TPH that exceeded NMOCD soil recommended remediation action levels (RRALs). Light non-aqueous phase liquid (LNAPL) was encountered in the three wells installed in 2004, and groundwater samples collected from eight of the ten wells contained hydrocarbons in excess of NMWQCC standards. Barium was detected in four wells in excess of the NMWQCC standard, and chromium was detected in one well in excess of the NMWQCC standard.

3.0 REGULATORY FRAMEWORK AND SITE CLASSIFICATION

The NMOCD has regulatory jurisdiction over oil and gas production operations including crude oil pipeline releases and closure activities in the State of New Mexico. This investigation was conducted in accordance with a "Revised Stage 1 Abatement Plan", submitted to the NMOCD on March 2, 2006. The NMOCD requires that soil impacted by a crude oil release be remediated in such a manner that the potential for future impacts to groundwater or the environment are minimized. The NMOCD hydrocarbon soil remediation levels are determined by ranking criteria on a site-by-site basis, outlined in the NMOCD *Guidelines for Remediation of Spills, Leaks, and Releases*, dated August 13, 1993. The ranking criteria are based on three site characteristics: depth to groundwater; wellhead protection; and distance to surface water.

The NMOCD guidelines require groundwater to be analyzed for potential contaminants as defined by NMWQCC standards. Human health standards for groundwater with total dissolved solids (TDS) concentration of less than 10,000 milligrams per liter (mg/L) can be found in New Mexico Administrative Code (NMAC) 20.6.2.3103, sections A and B.

As part of this Stage 1 Abatement investigation, a new water well search was conducted on May 28, 2008. According to the New Mexico Office of the State Engineer Water Administration Technical Engineering Resource System (WATERS) database, 18 wells are located within approximately one mile of the Site. Three of those wells are within 2,000 feet of the Site. Two were natural resource exploratory wells (likely petroleum exploration) and one was installed as a livestock watering well. According to the WATERS database, no wells are located within 1,000 feet of the Site.

Data collected during the soil and groundwater assessments indicate that the depth-to-groundwater at the Site ranges from approximately 26 to 35 feet below ground surface (bgs), that the site is not within 1,000 feet of a wellhead protection area, and surface water is more than 1,000 feet from the site. This gives the Site a ranking criteria score of 20 as summarized below:

Ranking Criteria and Scoring
Gladiola Station

CHARACTERISTIC	SELECTION	SCORE
Depth to Groundwater	<50 feet	20
Wellhead Protection Area	>1,000 feet	0
Distance to Surface Water	>1,000 feet	0
		Total Score = 20

Based on a score of 20, the following soil hydrocarbon RRALs apply to this site:

Soil Remediation Levels
Gladiola Station

Contaminant of Concern	RRALs (mg/kg)
Benzene	10
Total BTEX	50
TPH	100

mg/kg = milligrams per kilogram

Groundwater samples collected as part of assessment activities were evaluated using NMWQCC Standards for the following analytical parameters:

NMWQCC Human Health Standards for Groundwater
Gladiola Station

Contaminant of Concern	Concentration (mg/L) [1]
Benzene	0.01
Toluene	0.75
Ethylbenzene	0.75
Total Xylenes	0.62
Benzo (a) pyrene	0.0007
Total Naphthalene [2]	0.030
Arsenic	0.1
Barium	1.0
Cadmium	0.01
Chromium	0.05
Lead	0.05
Mercury	0.002
Selenium	0.05
Silver	0.05

[1] mg/L = milligrams/liter
[2] Total Naphthalene = naphthalene + 1-methyl-napthalene + 2-methyl-napthalene

4.0 MONITORING WELL INSTALLATION

4.1 FIELD METHODOLOGY

On April 28-29, 2008, an air-rotary drilling rig was used to advance six monitoring wells (MW-11 through MW-16) and two soil borings (SB-12 and SB-13) (Figure 2). Monitoring wells MW-11 through MW-16 were advanced into the saturated zone and completed at depths between 41.5 and 45 feet bgs. The soil borings were completed to a depth of 30 feet bgs.

Prior to drilling, all monitoring well and soil boring locations were approved by Exxon Mobil Environmental Services Company (EMES) personnel and marked appropriately. The utility notification service was also notified at least 48 hours prior to drilling activity. Prior to drilling, each soil boring/monitoring well location was probed and hand-cleared to an approximate depth of four feet bgs. The hand-cleared areas were larger than three inches in diameter, which is greater in diameter than the largest down hole tool. Pertinent areas of the drill rig and sampling tools were steam cleaned prior to drilling at the Site and in between borings.

Soil samples were retrieved in five-foot intervals by collecting drill cuttings. Cuttings were logged on a continuous basis, and field screened with a photo-ionization detector (PID) at five-foot intervals by the heated headspace method. The drill cuttings generated during the assessment were placed on and were overlain by plastic sheets for subsequent management. Samples collected for potential analysis were immediately placed into laboratory-supplied, four-ounce soil jars

equipped with Teflon-lined lids and placed on ice in an insulated cooler. Kleinfelder's field geologist described the soil using the Unified Soil Classification System, described rock lithology, recorded visual and olfactory observations, and measured PID headspace readings for evaluation of the presence of hydrocarbons. Soil samples selected for laboratory analysis were based on physical observations, field VOC measurements (via PID), and the professional judgment of the Kleinfelder field geologist.

Monitoring wells MW-11 through MW-16 were drilled and completed by a New Mexico-licensed water well driller. Four-inch, flush-threaded, schedule 40 PVC casing with 15 feet of 0.020-inch screened-casing was used. The well annulus was filled with a 10/20 sand filter pack to approximately two feet above the top of the screen interval and a bentonite seal was placed on top of the sand. A bentonite-cement slurry was placed above the seal to approximately one foot bgs and the well annulus was cemented to the surface. Soil borings SB-12 and SB-13 were backfilled with a six percent bentonite/cement grout mixture. Boring logs, monitoring well completion details, and New Mexico Office of the State Engineer well records are included in Appendix E. The locations of monitor wells MW-11 through MW-16 were surveyed by a licensed New Mexico surveyor to New Mexico State Plane Coordinates.

Monitoring wells were developed by removal of a sufficient volume of water to clear the well casing and annulus of sediment. Before removing water for development and sampling the monitoring wells were gauged for depth to water. Only two well volumes were removed before the wells bailed dry. Water quality parameters were recorded as the wells were being developed. The well development/purge water was stored in UN/DOT 55-gallon drums and left onsite for subsequent management. Groundwater samples collected during the assessment were placed in appropriate sample containers supplied by the laboratory, preserved on ice in insulated coolers and chilled to a temperature of approximately 4°C (40°F) for laboratory analysis. The coolers were sealed for shipment and proper chain-of-custody documentation accompanied the samples to the laboratory. The groundwater samples were transmitted to Test America Analytical Laboratory in Nashville, TN by overnight courier.

4.2 SUBSURFACE LITHOLOGY

Soil samples were logged by a Kleinfelder field geologist and the general subsurface soil and rock lithologies are presented in the boring logs included in Appendix B. The interval thicknesses, depths, and occurrences for the soil and rock types are presented within the boring logs for each soil boring/monitoring well. Cross-sections detailing subsurface lithology are presented as Figures 3A to 3C. Figure 2 shows the locations of the cross-sections, labeled A to A', B to B', and C to C'. The Site is underlain by poorly graded to silty to clayey sands interbedded with caliche and calcrete (calcified/cemented soils).

4.3 SOIL SAMPLING RESULTS

Thirty-one soil samples were collected during monitor well and soil boring installation. Soil sample analytical results collected during drilling activities are summarized in Table 1 and on Figure 4. The NMOCD RRALs are also presented for comparison to the analytical results. Soil samples from MW-13, MW-14, MW-15, and SB-12 exceeded NMOCD TPH regulatory limits for total gasoline- and diesel-range organics with concentrations ranging between 133 and 4,729 mg/kg (Table 3). All other detected compounds were below NMOCD RRALs. Copies of the analytical reports and chain-of-custody documentation are attached in Appendix C.

5.0 GROUNDWATER MONITORING AND SAMPLING

Prior to the collection of groundwater samples, water levels were measured in all monitoring wells. Groundwater samples were collected from existing monitor wells MW-4 through MW-10 on April 15, 2008. Wells MW-1 through MW-3 contained LNAPL, and were not sampled. Groundwater samples were collected from newly installed monitor wells MW-11 through MW-16 on April 30, 2008.

5.1 FIELD METHODOLOGY

Prior to purging the monitoring wells, static fluid levels were measured with an interface probe to the nearest hundredth of a foot. After recording fluid levels, the new wells were developed by bailing to remove sediments from the annulus surrounding the well screen. Samples were collected for analysis after bailing a sufficient volume of water to clear the well annulus or bailing the well dry, whichever came first. A new disposable bailer was used for each well to eliminate the possibility of cross contamination.

Following the purging process, laboratory-supplied sample containers were filled directly from the disposable bailer using a disposable discharge nipple included with the bailer. Groundwater samples were placed in ice-chilled insulated coolers. The coolers were sealed for shipment and proper chain-of-custody documentation accompanied the samples to Test America in Nashville, TN via overnight courier.

5.2 GROUNDWATER GRADIENT AND LNAPL THICKNESS

In April 2008, depth to groundwater at the Site ranged from 29.42 to 38.81 ft below top of casing. LNAPL crude oil was observed in monitor wells MW-1 to MW-3 in thicknesses ranging from 0.22 (MW-3) to 6.44 (MW-2) ft. A summary of the groundwater and LNAPL thickness, and corrected groundwater elevations are included in Table 2. Groundwater elevations in monitor wells that contained LNAPL were corrected using a specific gravity of 0.83. Gauging data indicates the direction of groundwater flow at the Site is to the southwest and northeast from a hydrologic high-point southwest of the tank berm. The average gradient is approximately 0.002 foot per foot (ft/ft) to the northeast and southwest (Figure 5).

Depth-to-groundwater in the monitoring wells remained relatively consistent during the last three monitoring events. LNAPL thickness increased significantly in monitor well MW-2 from 0.12 ft in February 2007 to 6.44 ft in April 2008. This increase may be related to a May 2007 Centurion pipeline release north of MW-2, which is discussed in more detail in Section 7.0.

5.3 GROUNDWATER ANALYTICAL RESULTS

Groundwater samples were analyzed for general chemistry parameters, including total alkalinity, bicarbonate alkalinity, chloride, nitrate, sulfate, and total dissolved solids (TDS). The samples were also analyzed for total RCRA-8 metals by EPA methods 6010B and 7470A/7471A; for volatile organic compounds (VOC) by EPA method 8206B; and for semi-volatile organic compounds (SVOC) by EPA method 8270.

Groundwater analytical results from samples collected in April 2008 are summarized in Tables 3 through 5. Benzene concentrations in eight wells (MW-4 through MW-7 and MW-12 through 15) exceeded the NMWQCC Standard of 0.01 mg/L (Table 3). Although benzene concentrations have remained relatively consistent with historical data, it was detected in new wells MW-12 through MW-15 above NMWQCC standards and is not defined to the north, west or south

(Figure 6). Ethylbenzene concentration in MW-5 and total xylene concentrations in MW-4 and MW-5 exceeded NMWQCC Standards of 0.75 and 0.62 mg/L, respectively (Table 3) and appear to be defined laterally at this time. Total naphthalene concentrations exceeded the NMWQCC Standard of 0.03 mg/L in wells MW-4 and MW-5, and in new wells MW-13 through MW-15 (Table 3). Although the concentrations remain relatively consistent with previous monitoring events, total naphthalene is not defined to the north and east (Figure 7).

No SVOC concentrations exceeded NMWQCC Standards this event (Table 4). Total barium concentrations exceeded the NMWQCC Standard of 1.0 mg/L in nine wells, including new wells MW-12, MW-13, MW-15, and MW-16 (Table 5). Total barium is not defined to the north, west, southwest or southeast (Figure 8). Total chromium concentrations exceeded the NMWQCC Standard of 0.05 mg/L in MW-10 (Table 5 and Figure 9) Groundwater laboratory analytical reports, quality control and chain-of-custody documentation are included in Appendix D.

6.0 INVESTIGATION DERIVED WASTE

Waste generated at this site was classified as non-exempt and is subject to hazardous waste characterization. A composite waste characterization sample was obtained from the soil stockpiles on April 29, 2008. The sample, identified as "Composite-Soil" was analyzed for BTEX, TPH, total RCRA Metals, and reactivity, corrosivity and ignitability (RCI). Based on the analytical results, the sample did not exhibit any hazardous characteristics. The analytical reporting results, testing methods, laboratory quality control reports and chain-of-custody documentation are provided in Appendix C. Soil disposal options are currently being reviewed.

The fluids recovered during the sampling event were containerized onsite in properly labeled drums and sealed. After completion of sampling activities, containerized fluids were picked up by Midwestern Vacuum Truck Company and transported to their reclamation facility located in Snyder, Texas for recycling. The cargo manifest is included in Appendix E.

7.0 REPORTED CENTURION RELEASE

LNAPL thickness had increased markedly in one monitoring well (MW-2) between February 2007 (0.12 feet) and April 2008 (6.44 feet). The increase in LNAPL thickness occurred after a Centurion pipeline release at the site on May 17-18, 2007. Centurion submitted a revised initial C-141 Release Notification and Corrective Action form to the NMOCD on August 3, 2007. According to the C-141 form, a reported estimated 15 barrels of sweet crude was released from a strainer valve failure into a sump. The sump is located approximately seven feet north of MW-2. According to Mr. Larry Johnson, NMOCD-District 1, Centurion submitted a final C-141 form that documented recovery activities at the Site; however, he was unable to locate the form. Kleinfelder, on behalf of ExxonMobil submitted a Freedom of Information (FOI) request to the NMOCD-District 1 Office on May 27, 2008, but have not received a copy of the final C-141 form to date, nor have they received any site remediation and/or assessment reports related to the May 2007 Centurion release.

8.0 SUMMARY OF FINDINGS

Based on record reviews, soil, and groundwater assessment activities performed at the Site, Kleinfelder presents the following summary of findings.

- On April 15, 2008, Kleinfelder gauged 10 and sampled seven monitoring wells. (Three monitoring wells were not sampled because they contained LNAPL);

- Between April 28 and April 29, 2008, Kleinfelder installed six additional monitoring wells and advanced two soil borings to delineate the hydrocarbon impact at the Site;
- Soil samples from four boring locations (MW-13, MW-14, MW-15, and SB-12) exceeded NMOCD TPH RRALs;
- On April 30, 2008, groundwater samples from the six newly installed wells were collected;
- Of the 13 wells sampled, the following NMWQCC Standards exceedences were reported:
    - benzene (MW-4 through MW-7, MW-12 through M2-15);
    - ethylbenzene (MW-5);
    - total xylenes (MW-4 and MW-5);
    - total naphthalene (MW-4, MW-5, MW-12, MW-13, and MW-15);
    - barium (MW-4, MW-5, MW-7, MW-8, MW-9, MW-12, MW-13, MW-15, and MW-16); and
    - chromium (MW-10).
- LNAPL thickness had increased markedly in MW-2 from 0.12 feet in February 2007 to 6.44 feet in April 2008. It appears that this increase may be related to a May 2007 Centurion pipeline release just north of MW-2.

9.0 LIMITATIONS

The scope of work for this report was intended to provide a limited investigation related to the presence of hazardous materials at the referenced site. This assessment was not intended to be comprehensive, identify all potential concerns, or eliminate the possibility of using this information with some degree of risk.

This report may be used only by the client and only for the purposes stated, within a reasonable time from its issuance, but in no event later than one year from the date of the report. Land or facility use, on and off-site conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party and client agrees to defend, indemnify, and hold harmless Kleinfelder from any claim or liability associated with such unauthorized use or non-compliance.

It should be recognized that definition and evaluation of environmental conditions is a difficult and inexact science. Judgments leading to conclusions and recommendations are generally made with an incomplete knowledge of the conditions present. More extensive studies may reduce the inherent uncertainties associated with environmental conditions. If the client wishes to further reduce the uncertainty associated with this study, Kleinfelder should be notified for additional consultation. No warranty, expressed or implied, is made.

Notes:

NMOCD RRAL = New Mexico Oil Conservation Division Recommended Remediation Action Levels for Sites with Total Ranking Score >19

BTEX analysis by EPA Method 8021

TPH analysis by EPA Method 8015 Modified

BDL = Below Detection Limits

Bold = concentrations within detection limits

[ ] = Above NMOCD action levels

TABLE 2

SUMMARY OF GROUNDWATER ELEVATION DATA
GLADIOLA STATION
LEA COUNTY, NEW MEXICO
May 2004-April 2008

WELL (*TOC Elev.*)	DATE	Depth to Water	Depth to LNAPL	LNAPL Thickness	Corrected Groundwater Elevation	Screen Interval (bgs)

3867.19						
MW-16	4/30/2008	29.95	---	---	3,837.07	26.0 - 41.0
3867.02						

Notes:

TOC = top of casing.

All depths measured from TOC, except for screen interval

LNAPL = Light non-aqueous phase liquid

bgs = below ground surface.

Top of casing survey for MW-1 through MW-3, based on local benchmark assigned a value of 100 feet, BNC, 5/17/2004

Top of casing survey for MW-1 through MW-16, West Company of Midland, 6/11/08

Corrected groundwater elevation in wells containing measurable LNAPL assume a specific gravity for LNAPL of 0.83

Notes:

mg/L = milligrams per liter

NMWQCC Standards = New Mexico Water Quality Control Commission Human Health Standards for Groundwater of 10,000 mg/L TDS Concentration or Less

= Above NMWQCC standards

Total Naphthalene = 1- and 2-Methylnaphthalene and Naphthalene

NS = Not Sampled

A-01 = Could not obtain constant weight.

L2 = Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.

DATA QUALIFIERS AND DEFINITIONS

A-01	Could not obtain constant weight.
B	Analyte was detected in the associated Method Blank.
L2	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
MNR	No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
R	The RPD exceeded the method control limit. The individual analyte QA/QC recoveries, however, were within acceptance limits.
R2	The RPD exceeded the acceptance limit.
ND	Not detected at the reporting limit (or method detection limit if shown)

COOLER RECEIP

NRE0018

Cooler Received/Opened On 5.1.08 @ 0820

1. Tracking # 7058 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 643140

2. Temperature of rep. sample or temp blank when opened: 0.2 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO (NA)

4. Were custody seals on outside of cooler? (YES) NO NA

If yes, how many and where: 1 front

5. Were the seals intact, signed, and dated correctly? (YES) NO NA

6. Were custody papers inside cooler? (YES) NO NA

I certify that I opened the cooler and answered questions 1-6 (initial) _____

7 Were custody seals on containers: YES (NO) and Intact YES NO (NA)

Were these signed and dated correctly? YES NO (NA)

8. Packing mat'l used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES) NO NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES) NO NA

12. Did all container labels and tags agree with custody papers? (YES) NO NA

13a. Were VOA vials received? (YES) NO NA

b. Was there any observable headspace present in any VOA vial? YES (NO) NA

14. Was there a Trip Blank in this cooler? (YES) NO NA If multiple coolers, sequence # 1

I certify that I unloaded the cooler and answered questions 7-14 (initial) _____

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES NO (NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES) NO NA

If preservation in-house was needed, record standard ID of preservative used here _____

16. Was residual chlorine present? YES (NO) NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial) _____

17. Were custody papers properly filled out (ink, signed, etc)? (YES) NO NA

18. Did you sign the custody papers in the appropriate place? (YES) NO NA

19. Were correct containers used for the analysis requested? (YES) NO NA

20. Was sufficient amount of sample sent in each container? (YES) NO NA

I certify that I entered this project into LIMS and answered questions 17-20 (initial) _____

I certify that I attached a label with the unique LIMS number to each container (initial) _____

21. Were there Non-Conformance issues at login? YES (NO) Was a PIPE generated? YES (NO) #_____

BIS = Broken in shipment

DATA QUALIFIERS AND DEFINITIONS

CSTM	>200
HTI	The holding time for this test is immediate. The laboratory measurement, therefore, may not be suitable for compliance purposes.
M1	The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M2	The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
M7	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
Z2	Surrogate recovery was above the acceptance limits. Data not impacted.
Z3	The sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.
ND	Not detected at the reporting limit (or method detection limit if shown)

METHOD MODIFICATION NOTES

Andi Jones

From: James Kennedy [JFKennedy@kleinfelder.com]

To: Andi Jones
Cc: Eileen Shannon
Subject: ExxonMobil Gladiola additional analysis request

Andi,

Can you please add RCI, Total RCRA Metals to the analysis run on the soil sample named Composite from the 4-29-08 soil samples submitted. The samples were sampled by Ty Burrows from Midland, TX, and the project is run out of our Albuquerque office. Thank you.

Regards,
James

Subject: RE: XOM-Gladiola Station soil analytical results

Based on a review of the boring logs, and a telephone conversation with Ty Burrows, a sample was collected from 34-35 feet from monitor well MW-11 on 4/28/08. The COC is correct. The jar lid was correct, the label was incorrect.

Please let me know if you need any additional information from me.

Thanks, Eilee
