Describe Cau	se of Probl	em and Reme	dial Actio	n Taken.*									
Swedge failed on circulating line coming off of production tank. The swedge has been replaced with a new one.													
Describe Are	Describe Area Affected and Cleanup Action Taken.*												
Initially 65bbls of oil was released and completely contained inside the walls of the facility. We were able to recover 63bbls with a vacuum truck and all standing fluid has been recovered. The contaminated soil has been removed from the facility and the spill area measured 10' x 100'. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD / BLM for approval prior to any significant remediation work.
