Re: Atlantic Richfield - Friess Federal
Commingling (LC-060409)

Gentlemen:

The Atlantic Richfield Company respectfully requests permission to surface commingle production on its newly acquired Friess Federal lease, Eddy County, New Mexico (LC-060409). Of the three wells on the lease two, No. 2 and No. 3, are completed in the Grayburg-Jackson pool and one, No. 1, is completed in the Fren-Seven Rivers pool. All are marginal producers.

The gravity of the Grayburg crude is 37° API, and the gravity of the Fren crude is 34.6° API, both at 60°F; therefore, the expected gravity of the commingled crude would be 36.6° API at 60°F.

We acquired the lease as of March 1, 1972, from Kennedy Oil Company. The production is commingled and the commingling order cannot be located; therefore, we have the No. 1 well (Fren-Seven Rivers) shut in. We have received verbal approval from the U.S.G.S. to commingle.

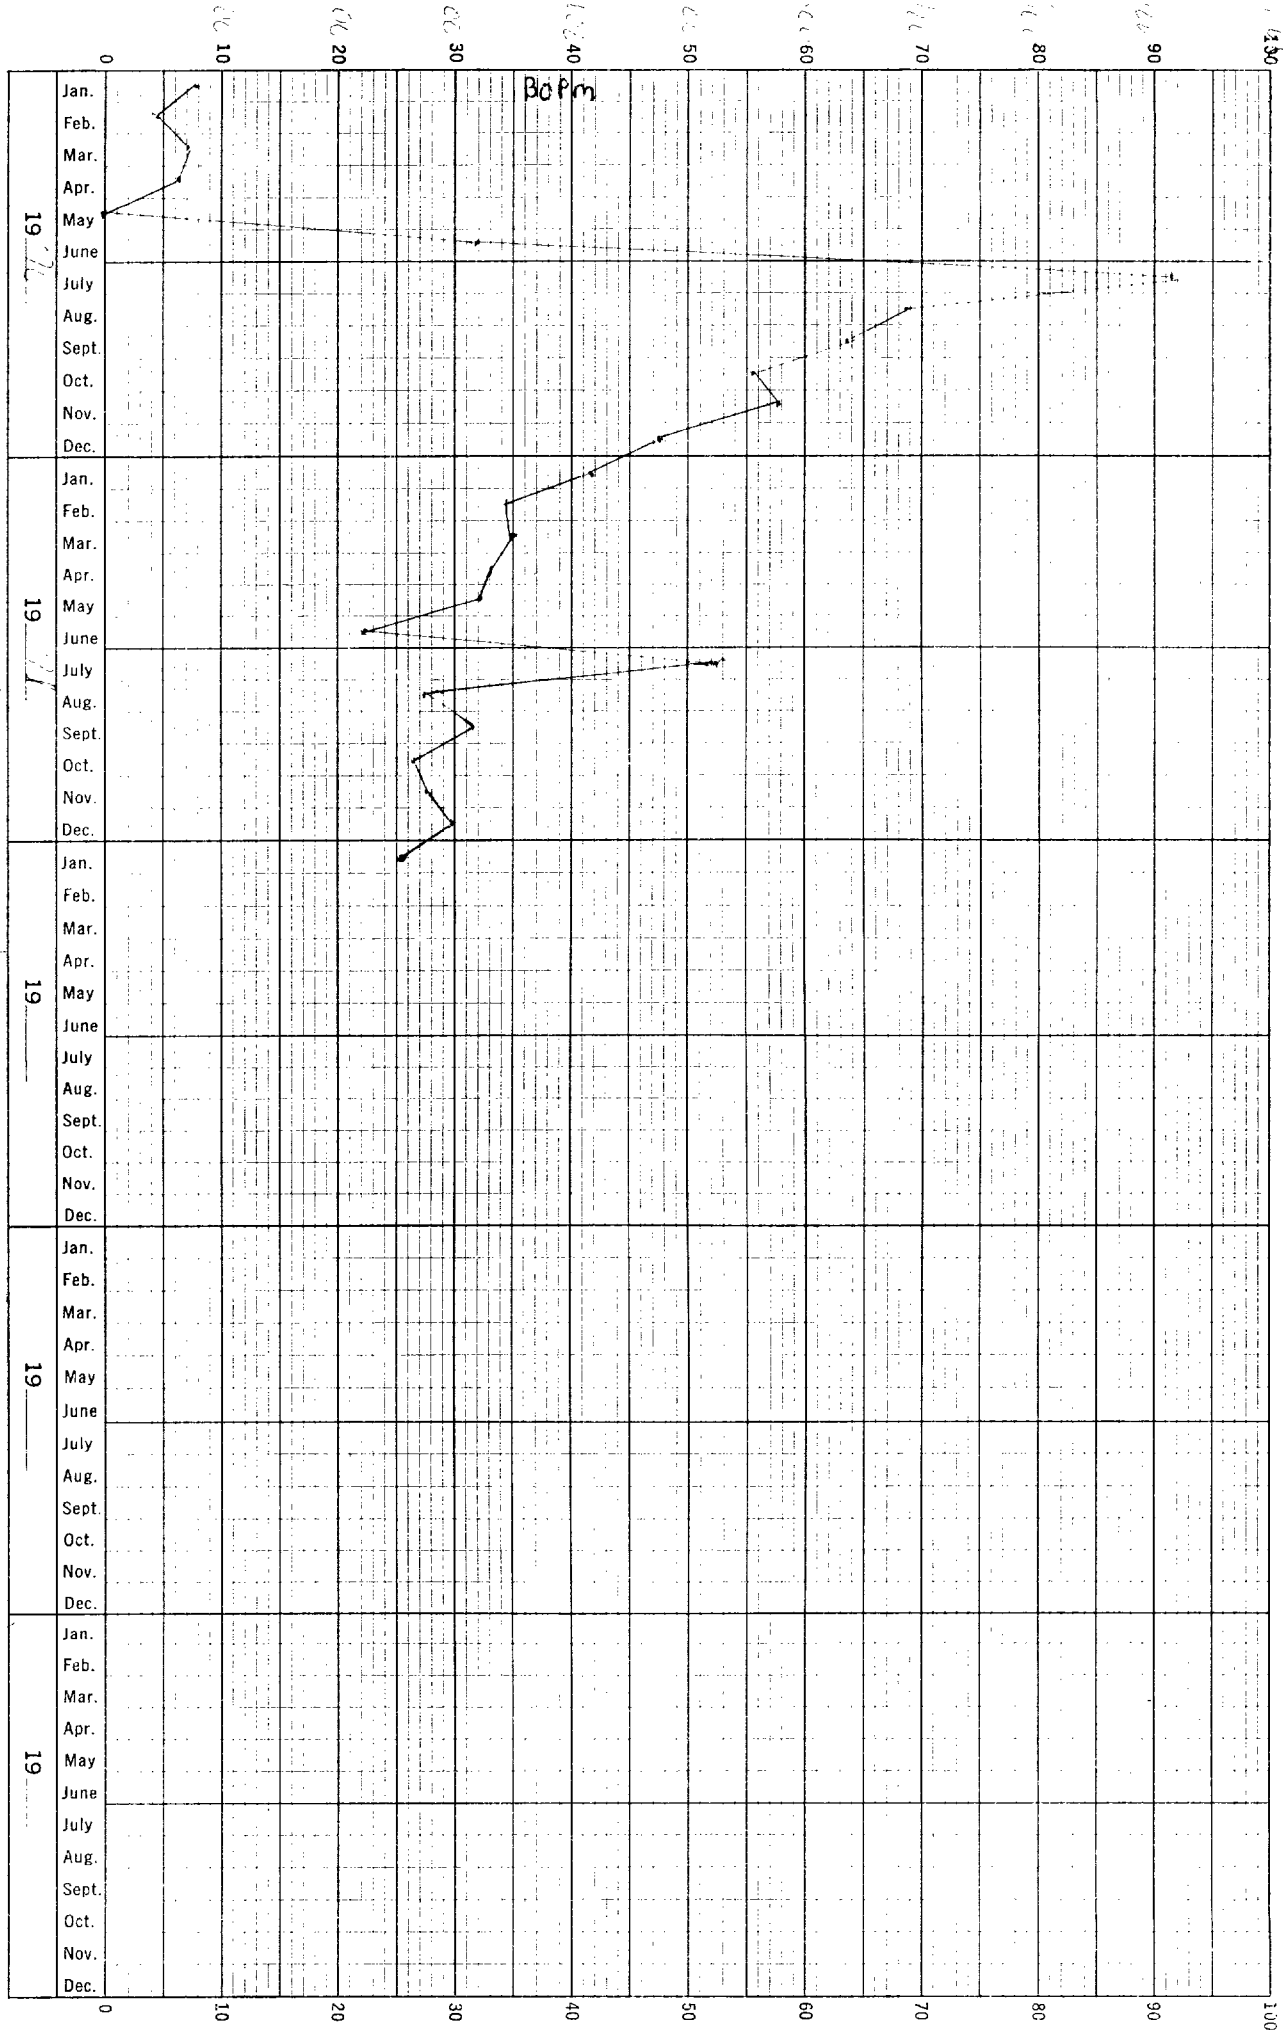

I have included production history for each well since January 1, 1970, a schematic of the battery, and a lease plat.

Very truly yours

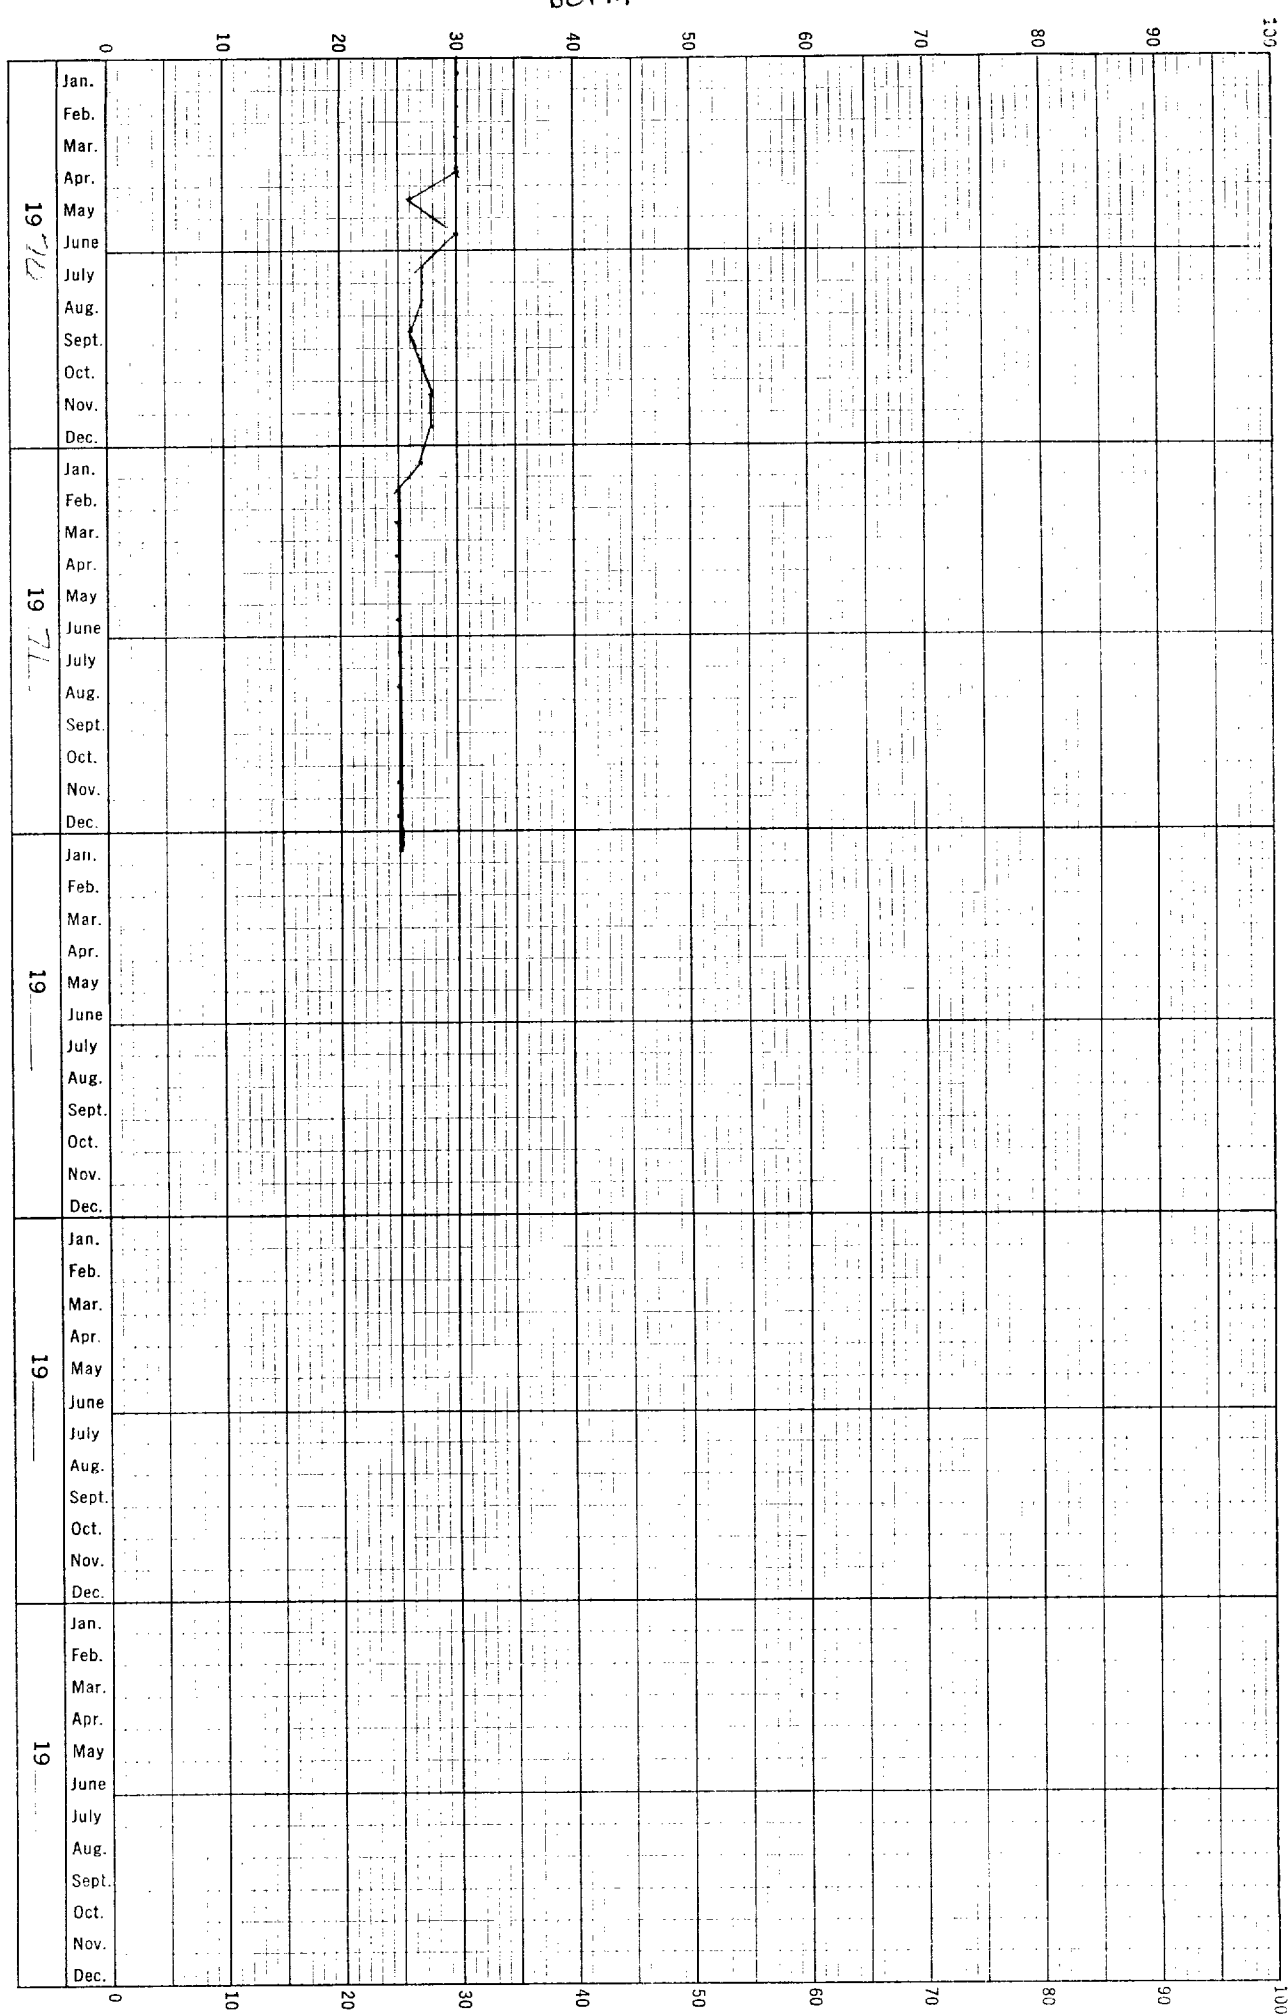

J. V. Curfew
