Bill Brancard
General Counsel Energy, Minerals, & Natural Resources Dept
1220 South St. Francis Drive
Santa Fe, NM 87505

Dear Mr. Brancard;

This letter is written in support of the letter submitted by Stephanie Garcia Richard,
Commissioner of Public Lands-elect.

The Special Hearing to be held on November 19, 2018 by the New Mexico Oil Commission
regarding natural gas wells in the San Juan and Rio Arriba County Blanco-Mesaverde gas pool
should be continued. The meeting has been continued since September and there is no reason to
move forward at this late juncture.

I recognize this issue is highly contested and this is the very reason we need to gain a greater
understanding of this important issue and proceed on this matter cautiously.

Thank you for your prompt attention.

Sincerely,

Debra M. Sarinana
New Mexico House of Representative, District 21

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Melissa Epple

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: [EXT] Hilcorp's application - Case No. 16403.

Hello Ms. Davidson,

I am writing today to voice my opposition to Hilcorp's application before the New Mexico Oil Conservation Commission asking to double the allowable well-density in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba Counties.

Moreover, a part of the application would set the stage to proceed with this type of activity without any public input and any environmental impact assessment.

I understand that we all have created a 'habit' around the way things have always been done because it's easier. But these are new times and the consequences of extracting oil and gas are more profound and full of potential problems.

It's just common sense to proceed with thorough analysis of Hilcorp's proposal and to involve those who would be most impacted. I urge you to vote NO on their application and proceed with more study and more community involvement to come up with the best way forward.

Sincerely,

Lynne Fischer

Subject: [EXT] Support the Hilcorp Pool rule application

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Sara Hanson

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Hello
My name is Charlotte Shirley, I live in Valencia County.
We travel frequently to the San Juan area, and care deeply about it.
Please register my strong disapproval to any plan that allows drilling...especially what's being proposed by Hilcorp.

Thank you.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

No new drilling for oil and gas in NW NM!

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Jill Joseph

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Current rules require oil and gas operators to go through a public hearing process every time they seek an exemption that relates to the drilling, spacing, and operation of wells.

However, the Hilcorp energy application to double well density, currently with you in the Oil Conservation Commission, would take away this process, depriving impacted communities the opportunity to participate in the decision-making process at all.

These additional wells have not been planned for and their potential impacts have not been assessed. Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

NM seems to need the income from fossil fuels and natural gas. Please harness some of the costly brain power at LANL to find a scientific way to use these resources without wrecking the environment and safety of northwest NM. If scientists could make atomic bombs there, surely they could do this if they'll put their minds to it....Allen Lovekin, 5215 Overlook DR NE, Albq 87111 (I could find no way to put this information on your form below (where it's called for)

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

"Oil Conservation Commissioners" — a loaded, ironic name for the group of you who individually have ideas about how to move forward in relation to New Mexico (and the world's) environment. Your individual ideas form a range of ideas, and as a group you make compromises and I do not, nor should anyone, expect you to have all the answers. New information comes out every day concerning benefits for the public health; we just found out about taking that little child-dowse of aspirin and how it is now considered very bad — doctors are saying "stop" doing that! So, similarly, we are learning that our supposed best practices in relation to our land, water and fossil fuels is being discovered to be misguided. Therefore, proceed very slowly. First, right now, deny and reject the Hilcorp Energy application (#16403) and give yourselves a breather. Some of you have investments in the oil and gas industry and you may have friends who do as well, so I will admire your careful approach in this matter. Go slow, now, and vote NO now.

I definitely urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

Slow up, or slow down — either way, turn toward solar in New Mexico, and turn down Hilcorp's application request!

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Kristina Stein

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I implore you to decline the application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have disastrous effects on air quality, already limited water resources, and pristine landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not disregard the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Stephen Malmberg

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Marilyn Rose

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

M Carolyn Bemis

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request.

I am strongly opposed to the Hilcorp proposal because it would put at risk life-giving water resources, disturb the beauty of our New Mexico lands and negatively affect air quality. More drilling would also bring additional greenhouse gases into our environment and exacerbate climate change.

The Oil Conservation Commission must take seriously the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Thank you for your hearing my concerns. I urge the Commission to deny the Hilcorp application.

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Deborah King

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Ruth Morris

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Louise Miller

Subject: [EXT] Re: Case No. 16403 - no fracking please

Florene Davidson,

Commission Clerk Florene Davidson:

I do not support fracking. I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

I am a young person concerned about climate change and clean air. My dear friends live in the middle of the current fracking boom in northwest New Mexico. One of my friends, a young Diné organizer, once asked me, "Why do they say we are unimportant?" I'm writing today to ask you to stop labeling whole communities as unimportant, to respect those indigenous to the region, and to protect future generations.

As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. Dear New Mexico Oil Conservation Commission,

As a citizen of the southwest and New Mexico I call on you to avoid a dangerous, reckless, and premature decision on the Hilcorp application. The Commission needs to have before it a thorough analysis on the air, water, social, and cultural impacts of the Hilcorp proposal. Currently the proponents do not show they are able to address the health and safety needs of San Juan County, the region, and the planet as a whole for the present and generations to come. Please do not rush to judgment and carry out your mandate to protect us all before it is too late.

Thank you.

Commission Clerk Florene Davidson:

We need to stop the orgy of fracking in this state, New Mexico, and in the United States. We are polluting water, which is necessary for all life, for short term profit. This water will be polluted for future generations. We are also contributing to climate change in a dire way. Climate change is the number one threat to the planet right now. This fracking also effects the health of people in the nearby communities. We do not need to make the wealthy oiligarchs any wealthier. WE MUST STOP THE FRACKING IMMEDIATELY and start using renewable energy.

Thank you for your consideration of this important matter.

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

As a parent and an individual with asthma, I am extremely concerned over our continued reliance on drilling and fossil fuels. This sort of extraction is incredibly unhealthy for people and for the planet. We must, as a unified people, move away from methods that contribute to climate change and environmental damage.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Hemp is also a much more sustainable source of fuel, we need to switch our state over to hemp Resourced fuels so that we can get away from fracking because the state cannot continue to tear up our beautiful home lands and our ancestral grounds for oil it's horrible the

land looks as though it is stricken with scars. It's poisoning the land, water and air as well as all living beings... please stop fracking!!!!

I write to express my complete opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) unequivocally deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns OVER oil and gas applications.

This proposal creates serious risks to water resources, by additional surface disturbance and landscape fragmentation, it negatively affects air quality and undeniably contributes to climate change.

We don't want you, the Oil Conservation Commission, to disregard the concerns of San Juan and Rio Arriba County citizens. We see the history in place of how this commission prioritizes the will of Hilcorp and other oil and gas companies/corporations over the needs of the communities impacted.

The magnitude of Hilcorp's application for well-density change is in fact doubling what it already has, what the community is already battling because of the health effects and damages to the water and soil and air.

The Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter. This is a tactic that models

corporation over community. It is an example of how person hood identity and temporary gain to the state, supersedes human rights and needs.

Long term thinking: If your commission had commonsense and vision, your recommendations to the state would be to change your job description. You would phase out permits for oil and gas, seriously supervise the existing wells (no more self regulatory practices) engage the communities on the front lines (transparency) while envisioning appropriate infrastructures for energy which will cause far less damage to the present and the future. In effect to create a true solvency and preparedness for our state to meet the steady reality of climate change/disruption.

How I see it, this is (again) about how oil and gas companies have hijacked the due process of what your job on paper entails. You, the members of this commission, are here in this position. Technically you show up everyday to meet the needs, firstly of us, the citizens of the state of New Mexico. That is your job, to ensure that our needs, our rights to a healthy environment prevail over the rights of oil companies who would blanket the region with wells, use civilian/citizen infrastructure for their needs at our expense, while covering up sloppiness and accidents. In this case, the Hilcorp permit, it is criminal how twisting a few words suddenly allows a company to misuse, to re appropriate their wells and start all over again without new permits, without oversight, with more "self regulating" promises that are proven insufficient for public safety and for community environments.

People, communities have lived on this land for untold generations w/o damaging their surroundings. With new energy technologies and ways to conserve and build, we are at a choice point that will enable us to follow suit.

You can lead by prioritizing us, the people. You yourselves can examine history and learn from your own examples of conduct. Does it really work to keep giving carte blanche to companies like Hilcorp? Does it really benefit our state, its peoples and this land?

Thank you for your consideration of this important matter.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

New Mexico already has the largest ongoing methane emissions in the world. I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Sandra and Glenn Griffin

Subject: [EXT] Hilcorp's Request

As a public agency, NMOCC has both the regulatory authority and the duty to consider the concerns of the public about applications brought forth before the commission.

- As a member of the public I am deeply concerned about how this application would affect public health and the environment. In particular, I am concerned about the potential of this proposal to impact water resources, to create additional surface disturbance and landscape fragmentation, and to negatively affect to air quality and contribute to climate change. Disregarding the concerns of San Juan and Rio Arriba county citizens by NMOCC concerning the magnitude of Hilcorp's well density change application would be extremely troubling.
- San Juan County is already on the cusp of exceeding safe ozone levels and oil and gas development is a major contributor to the Delaware-sized methane hot spot that is a black eye on New Mexico, the oil and gas industry, and the nation as a whole. I am concerned about whether Hilcorp is taking adequate steps to capture methane while drilling new wells or doing recompletions. Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.

Concerned Citizen - Laura Johnson, Santa Fe, New Mexico

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Gary Brooker

Subject: [EXT] Hilcorp's application for more wells

Greetings, OCC,

The New Mexico Oil Conservation Commission (OCC) must not approve Hilcorp's application on November 19 to double the number of their wells on each parcel. It is essential that this flagrant disregard for the health, air and water quality of New Mexico residents as well as the extreme effects of methane on climate warming be stopped.

Facts about Methane:

- Methane traps 25 times more heat than carbon dioxide.
- New Mexico produces as much climate pollution in the Four Corners as 12 coal fired power plants.
- In recent years NM increased methane pollution 38% as opposed to Colorado which has strict rules and has reduced this figure by 30%.

I am strongly opposed to allowing NM to remain a pollution friendly state. The methane discharge from existing wells and any in the future must be capped, metered, and taxed to assist our state and reduce pollution prior to the approval of any increase in drilling density.

Please, for the sake of all New Mexico citizens, do not approve this application.

Sincerely,

Liz Aicher
Los Alamos, NM

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Randy Smith

I strongly oppose the permitting of doubling the number of wells allowed on a well pad. This will have lasting detrimental impacts on the air and water quality in these areas. In addition, it will also increase the negative health impacts on the affected communities. I'm also very concerned about the increase in air pollution that it will cause through more flaring and venting. New Mexico is facing long term water shortages and any plan that leads to a huge increase in using more water should be prohibited. I strongly support protecting our citizens and our precious resources.

Subject: [EXT] Regarding: Hilcorp's application Case Number 16403

To: Commission Clerk Florene Davidson:

Hilcorp's proposal to double the density of allowable wells in northwestern New Mexico could result in an additional 8000 new wells and recompletions in the San Juan and Rio Arriba counties of New Mexico. This area is already home to 40,000 oil and gas wells.

The NMOCC is considering a vote on the proposal without any public input or comment, even though, as a public agency, the NMOCC has a responsibility to allow the public to voice its concerns. The concerns are, but not limited to, the following:

- The negative affect on air quality. Already the northwestern area of NM is about to exceed safe ozone levels.
- There is a lack of current impact analysis by the Bureau of Land Management. What will be the impact of additional surface disturbance and landscape fragmentation for the inhabitants of the area?
- What will be the impact of the water resources in the effected area?
- Additional wells are bound to increase the already disgraceful methane hot spot in the four-corners area. Is Hilcorp currently taking adequate steps to capture methane gas for their existing wells?
- Hilcorp has a history of violations in other states. Their past history must be a consideration for future proposals.

I repeat. The NMOCC has a responsibility to allow the public to voice its concerns before voting on the Hilcorp proposal to double the density of allowable wells in northwestern NM. It is the respectable thing to do.

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

New Mexico is perfectly poised to develop alternative energy industries based on solar and wind power. Fossil fuel is no longer a viable energy source.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Martha Wilder

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

Whatever short term benefits may be realized in the form of jobs, economic gain, etc., are not worth it in my opinion. I believe we should instead be focusing on long-term growth opportunities that are stable and beneficial for both the people and the land we inhabit, in order to make New Mexico a viable place to prosper and grow. I urge you to heed this sentiment in your decision making process; whatever outcome you reach will undeniably impact the future of the state and its people. Thank you.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

John R Thayer

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Elizabeth Elk

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: [EXT] Re: Case No. 16403, no!

Florene Davidson,

Commission Clerk Florene Davidson:

I am opposed to of Hilcorp's Case No. 16403 proposal to double density of wells. I request that the New Mexico Oil Conservation Commission (NMOCC) deny the request. They need to hear our public concerns over energy development applications and consider more values than just short-term profits for a few companies. This beautiful New Mexico landscape is valued by thousands, nationwide, even internationally, for cultural and scenic values, history, and present-day Native American religious practice.

This "double drilling" proposal would risk to quality and quantity of water, would damage air quality and contribute to ongoing climate change, as well as negate any potential for continued tourism (which brings income to the area) and traditional uses by people whose ancestors have lived there for thousands of years. If the Oil Conservation Commission disregards the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change, that would be a tragedy.

Also, has there been enough public notice prior to the upcoming November 19 hearings on this matter? Nope.

Thank you for your attention to my concerns.

Subject: [EXT] No double drilling in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba counties

Dear Ms. Davidson,

I am writing you to ask the New Mexico Oil Conservation Commission to NOT change State rules to allow the doubling of natural-gas wells in northwest New Mexico. In particular, do not allow Houston-based Hilcorp Energy under application case #16403 to double the number of natural-gas wells allowed in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba counties.

With some of the greatest renewable energy sources in America, New Mexico should be focusing on expanding our revenue base to become a leader in solar and wind energy. In addition, our draw as a tourism destination for nature and sporting enthusiasts abounds. We are better served by supporting investments in these unique opportunities, which keep profits within our State and promote local growth. We cannot continue to spoil the natural beauty and versatility of our enchanted New Mexico.

When I worked near El Paso, TX during the mid-1990s, crude oil came out of our water tap. It would be terrible to expand that situation. The more fracking, the more chance that water resources may be compromised.

San Juan County is already on the cusp of exceeding safe ozone levels, and oil and gas development is a major contributor to the Delaware-sized methane hot spot that is a black eye on New Mexico, the oil and gas industry, and the nation as a whole. Will Hilcorp take adequate steps to capture methane while drilling new wells or doing recompletions? Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.

Subject: [EXT] Support the Hilcorp Pool rule application

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Josh Johnson

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

Hilcorp is a bad-faith actor with a history of violations in other states. I am deeply concerned about whether Hilcorp's recompletions in the Blanco-Mesaverde are in compliance with EPA rules that require green completions to capture methane.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

As a citizen of New Mexico, I am concerned at the speed of oil and gas approvals in our state. Combining these proposal considerations with the proposal and approval activities of the EPA for private corporations in the nuclear waste industry has made our state the dumping ground for many of the current environmental problems of our nation. It has also made our state an unhealthy, unstable, and frankly, less appealing place to live. The region where this proposal will increase development is already at serious risk of exceeding safe ozone levels and there

is already a scientifically proven methane hot-spot the size of the state of Delaware. This proposed project would only intensify these problems.

The oil and gas developments also have considerable health impacts on the people of San Juan County and Rio Arriba County. For instance, anecdotal evidence among people in the Counselor Chapter, Lybrook, and Nageezi regions (per the 2016 Health!Impact Summary of Oil!Well Exposure

Counselor Chapter

San!Juan!Basin, New Mexico), report increases in the following among community members: increased rates of asthma in children, un-diagnose-able respiratory and sinus issues, increased migraines, and unexplained vision problems. Such events would be speedily reported, an outcry would occur, the news media would arrive, and the issue would be attended to if this were in a white, wealthy community. Unfortunately, these proposals are seldom if ever made for those communities, they are pretty much made to take place near poor communities, and communities of color. This brings up the issue of economic discrimination.

As this proposal is located in both Apache and Dine' (Navajo) country, and as a Native American Indian myself, I begin to wonder about serious governmental-sponsored investigation, or the lack thereof, of another significant issue: environmental racism. If the Commission does not consider these other issues, it is my considered opinion that it is failing in its due diligence in this matter.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter. This is a serious violation of public trust, as well as a lack of due diligence on the part of the Commission.

Thank you for your consideration of this important matter.

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

My primary objection to this proposal is the threat to New Mexico's water. We are suffering from a lack of water due to the serious drought that is predicted to continue. This resource needs to be protected for the daily needs of New Mexican's.

The proposal would also create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter. This proposal warrants a new process of comprehensive environmental review and public consultation to ensure that any negative impacts to communities, correlative rights, environmental and cultural resources are mitigated.

Thank you for your consideration of this important matter.

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

I am trying to understand why New Mexico insists on remaining on the wrong did of history when it comes to fossil fuel extraction. New Mexico has more than enough sun and wind to offset the destructive process of oil and gas extraction which has proven time and again to cause underground pollution of water resources. I shouldn't need to tell you that water in this region is more precious than oil.

I am also trying to figure out how further violation of New Mexico's landscape can possibly work in conjunction with Susanna Martinez's own "New Mexico True!" campaign.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Subject: [EXT] Expanded Gas Drilling

It is my understanding that you are considering expanding permits for gas drilling in and around San Juan county that would double the number of drilling sites permitted.

I am asking you to ask negatively for this request. At a time when climate change is having enormous impact on our local environment including prolonged drought, as well as devastating forest fires throughout the Southwest extended gas drilling will have a further negative affect on our environment.

Additionally, insignificant likely of carbon-credit taxation is likely to make these feeling activitiesunfavorable in regard to producing revenue for the state.

Clearly New Mexico should be focusing its efforts in the area of renewable energy which would escape carbon-credit taxation comma as well as being a much more marketable form of energy production and industry in the future.

I am urging you not to approve the expansion of Julian permits in and around San Juan county.

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

This is no time to minimize or ignore environmental protections in San Juan County or any other place. We have an incredible challenge that is existential -- climate change -- and we need to reduce, not expand fossil fuel drilling, flaring, construction traffic, etc.

I am very opposed to the Hilcorp proposal to increase well-density (Case No. 16403) and request the New Mexico Oil Conservation Commission (NMOCC) deny the request.

I'm aware that NMOCC has both the regulatory authority and thus they consider public concerns over oil and gas applications. So, I am communicating with you to convey my considered opinion that this would be a disastrous move to introduce doubling the impact of this industry's rape of the state I love.

Have the citizens of these counties indicated that it would be desirable to exploit their lands in this way? The incredibly short notice given for the September or November hearings has deprived them of a voice.

Furthermore, the Oil Conservation Commission has insufficietn provided public notice related to the hearings on this matter.

Thank you for your consideration of this important matter.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Paul Wilson

As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

In an arid landscape as fragile as the Southwest and still recovering from drought, this proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change.

San Juan County is already close to exceeding safe ozone levels.

Considering methane's role in warming our environment, I am also concerned about whether Hilcorp is taking adequate steps to capture methane while drilling new wells or doing recompletions.

Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.

It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Dear [target:organization],

Since this industry is incapable of coming up with an absolutely fool proof way of doing its job, I don't think you should allow them to drill even more toxic wells in our landscape. Stop them from further poisoning our land and water. No amount of profit can recompense people for their lost health from toxic exposure.

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Hodge Jones

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Please Oppose Hilcorp's application at your meeting this Monday

Dear Ms. Davidson,

I am writing to ask that the NM Oil conservation Commission not approve Hilcorp's application at the meeting on Monday, Nov. 19. I understand their application requests a doubling of the number of wells on each parcel in the northwestern part of our state. I feel this would jeopardize the health, air and water quality of NM residents as well as negatively impact climate change due to methane release.

Sincerely,

Diana L. Bell, MD

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We neither want nor need increased extraction and burning of fossil fuels that contribute to climate change. New Mexico is perfectly positioned to develop its tremendous potential for renewable energies, including solar and wind power. Let's not turn the clock BACK, let's look FORWARD to building a future based on clean energy. Please say NO to this proposal!

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Michele Johnson

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Edna Lusk

Subject: [EXT] Drilling

I am deeply concerned about a state and nation hell bent on destroying a way of life and I don't mean just a temporary destruction of some nice views as a trade off for oil and gas extraction. Rather what I mean is the end of life for humans on the planet through being obsessed by making money through fracking and ramping up oil and gas in order to achieve some short term gains that will completely ruin not only the state of NM but the SW portion of the nation and contribute to the demise of the planet being habitable. When those who do not understand basic ecological principles control oil and gas development and increase it over and beyond what is appropriate, this shows an ethics devoid of purpose aside from next quarter profits. While we may need to transition to renewables we need to be moving toward them extremely quickly for our very survival as a species. Wake up and smell the inability of the extractive industry to understand an ecosystem and how to maintain it for ongoing life enhancement! As a public agency, NMOCC has both the regulatory authority and the duty to consider the concerns of the public about applications brought forth before the commission. Please begin doing your job to recognize these concerns!

- As a member of the public I am deeply concerned about how this application would affect public health and the environment. In particular, I am concerned about the potential of this proposal to impact water resources, to create additional surface disturbance and landscape fragmentation, and to negatively affect to air quality and contribute to climate change. Disregarding the concerns of San Juan and Rio Arriba county citizens by NMOCC concerning the magnitude of Hilcorp's well density change application would be extremely troubling.
- San Juan County is already on the cusp of exceeding safe ozone levels and methane hot spot that is bad bad bad for New Mexico, and the nation as a whole. Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.
- Residents will be effected significantly and have been impacted by oil and gas. The property values go down when you get a well in your backyard.
- We need to move toward renewable energy sources of wind and solar ASAP if we give a damn about our collective future beyond 20 years of profit. The heat we are creating on the planet will become intolerable and literally there will be no livable NM let alone SW United States, the cost of mitigating climate change is too great a peril to not demand an immediate change in energy policies.

Florene Davidson,

Commission Clerk Florene Davidson:

My name is Dr. Doreen M. Bird and I am a tribal member from Santo Domingo Pueblo, NM. Unfortunately you are in control of major decisions regarding our ancestral and aboriginal homelands and I am here to tell you I DO NOT CONSENT to any more drilling or destruction to our sacred lands. I am a public health professional and know all too well the negative health consequences of the extraction industry on our Peoples, Lands, animals and the greater ecological environment.

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter. Money and economic development isn't the most important thing in New Mexico, it's the sustainability and preservation of our People and environment as well as protection of our cultural ways that's most important to future generations. Have a heart and listen to us People who were here hundreds of years before you and yours.

Sincerely,
Dr. Bird

I am writing to express my concern about the proposed doubling of wells in San Juan and Rio Arriba counties. I am concerned about the impact more wells would have on this high desert environment, especially water and air quality. There is already a huge methane pollution problem; adding more wells would only exacerbate it. Please do a thorough study of the impacts that granting Hilcorp's request would have before allowing it, and, at the very least, take action to capture methane in existing wells before increasing the problem.

Thank you.

Subject: [EXT] Support the Hilcorp Pool rule application

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Kristin Johnson

Dear Ms. Florene Davidson,

I am a very concerned New Mexico resident.

Fracking is an extraction technology that is already causing huge problems in other states. Earthquakes, water contamination, destruction of our beautiful lands.

We already have too much fracking going on. Our water resources are scarce and should not be allowed to be exploited and wasted for short term profit which will leave us impoverished with spoiled land and water, the most precious resources we have.

Please add my name to the growing list of New Mexicans who don't want this travesty, who are saying "Enough", no more fracking for New Mexico.

Thank you.

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] DOUBLING the well density in the Blanco-Mesa Verde formation

Dear Ms. Davidson,

As a member of the public, I am deeply concerned about what is happening in New Mexico:

Hilcorp is seeking approval to DOUBLE the well density in the Blanco-Mesa Verde formation across San Juan and Rio Arriba counties **without any analysis of impacts**. The move could lead to 8,000 additional wells.

Communities in San Juan and Rio Arriba counties already are overwhelmed by oil and gas. Northwestern New Mexico is home to more than 40,000 oil and gas wells as well as ancillary compressors, processing plants and pipelines.

No analysis has been done on the impacts of doubling the well density. I am deeply concerned because approval of this request would circumvent the current public process required when an exemption to the well density is requested.

As a member of the public I am deeply concerned about how this application would affect public health and the environment. In particular, I am concerned about the potential of this proposal to impact water resources, to create additional surface disturbance and landscape fragmentation, and to negatively affect to air quality and contribute to climate change. Disregarding the concerns of San Juan and Rio Arriba county citizens by NMOCC concerning the magnitude of Hilcorp's well density change application would be extremely troubling.

San Juan County is already on the cusp of exceeding safe ozone levels and oil and gas development is a major contributor to the Delaware-sized methane hot spot that is a black eye on New Mexico, the oil and gas industry, and the nation as a whole. I am concerned about whether Hilcorp is taking adequate steps to capture methane while drilling new wells or doing recompletions. Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.

Thank you for your consideration!

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

My name is Patricia Reda. I live in the East Mountains and work in a prominent Albuquerque hospital as a Registered Nurse. I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications. I write as a Patient Advocate and am appalled by this obvious wanton disregard to Public Health.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change. The detrimental effect of Hilcorp's proposal would be devastating to New Mexico and her residents. I oppose this unrestrained assault on New Mexico. I oppose wasting our precious water. How can you reconcile wasting 9 million gallons of water per well in a desert state. It would waste billions of gallons of water and make New Mexico a wasteland. The detrimental effects of fossil fuel extraction is well documented and in light of the United Nations Climate Report, I see this proposal of Hilcorp to be Depraved indifference to Human Life. I view you accountable for assisting in destroying the health of New Mexico, by destroying our water resources, poisoning our air and lands and

therefore all people of New Mexico and the surrounding states. You are assisting in the 6th Mass Extinction. Hilcorp has no regard for the sanctity of life. They are without a moral compass. They simply do not care about the grievous harm they cause to New Mexico. I see this daily. I see the harmful effects of pollution in New Mexico by the increase of asthma, endocrine disruption causing cancerous tumors, birth defects, and other developmental disorders. Any system in the body controlled by hormones can be derailed by hormone disruptors. The immense cost of illnesses and the inability to support oneself and family causes great harm to the individual and to society as a whole. Health care costs skyrocket as a result of fossil fuel pollution.

San Juan County is already on the cusp of exceeding safe ozone levels and oil and gas development is a major contributor to the Delaware-sized methane hot spot that is a black eye on New Mexico, the oil and gas industry, and the nation as a whole. I am concerned about whether Hilcorp is taking adequate steps to capture methane while drilling new wells or doing recompletions. Doubling drilling will certainly result in declining air quality that will affect 13,000 kids and adults in San Juan County who struggle with asthma.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

I am speaking to you as a citizen who is on the front lines of the detrimental effects of fossil fuel extraction upon my patient population. And you are not exempt. One day you will be my patient too. And I will fight for you.

You are an advocate too. But who will you advocate for? Do the right thing and deny Hillcorp New Mexico will hold you accountable for this wanton disregard of our quality of life.

Protect New Mexico from those who would destroy her. Protect OUR Air. Protect OUR Water. Protect OUR Lands. Protect OUR Wildlife. Protect us from Corporate Greed. It is YOUR Duty.

Sincerely,

Patricia Reda, RN

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Christina Supporter

From: Lois Farrington <lois@whidbey.com>
Sent: Monday, November 19, 2018 10:17 AM
To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Hillcorp proposal to double well density

NMOCC Members,

I am concerned than Hillcorp's proposal to double the well density has not adequately explained the impacts on water and air quality to the citizens of the area. Additionally, there has not been ample time for citizens to be informed or to comment on the proposal. I do not see a plan for methane capture, nor do I know of efforts to provide clean drinking water for residents of San Juan or Rio Arriba Counties. At the very least, studies need to be done around the health impacts of well density, and the contribution to climate change needs to be examined, the findings publicized, and reasonable opportunity for public input must be given.

Respectfully,

Lois Farrington

Subject: [EXT] Request to NMOCC

Dear Ms. Davidson,

I respectfully ask the New Mexico Oil Conservation Commission to not change State rules to allow the doubling of natural-gas wells in northwest New Mexico. In particular, do not allow Houston-based Hilcorp Energy under application case #16403 to double the number of natural-gas wells allowed in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba counties.

With some of the greatest renewable energy sources in America, New Mexico should be focusing on expanding our revenue base to become a leader in solar and wind energy. In addition, our draw as a tourism destination for nature and sporting enthusiasts abounds. We are better served by supporting investments in these unique opportunities, which keep profits within our State and promote local growth. We cannot continue to spoil the natural beauty and versatility of our enchanted New Mexico.

Kathleen M. Burke

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Cherie Darland

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Do not allow doubling of natural-gas wells

Dear Ms. Davidson,

I am writing to you to ask the New Mexico Oil Conservation Commission to NOT change State rules to allow the doubling of natural-gas wells in northwest New Mexico. In particular, do not allow Houston-based Hilcorp Energy under application case #16403 to double the number of natural-gas wells allowed in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba counties.

With some of the greatest renewable energy sources in America, New Mexico should be focusing on expanding our revenue base to become a leader in solar and wind energy. In addition, our draw as a tourism destination for nature and sporting enthusiasts abounds. We are better served by supporting investments in these unique opportunities, which keep profits within our State and promote local growth. We cannot continue to spoil the natural beauty and versatility of our enchanted New Mexico.

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

As a member of the Navajo Nation and whose fathers clan is Kin'yaa'anii' or Towering House People we trace our origins to Chaco Canyon I am opposed to any more drilling and or fracking in the area.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: [EXT] [Possible Spam]: Support the Hilcorp Pool rule application

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Ben Lyons

Subject: [EXT] Hilcorp Application

New Mexico Oil Conservation Commission
Florine Davidson

Dear Ms. Davidson,

We are appalled but not surprised about the plan to double the density of fracked wells in San Juan and Rio Arriba County.

We all know that there is very little time to mobilize against the catastrophic effects of accelerated climate change. Doubling down on gas and fracking production at a time when the cost of renewables is now on a par with coal and gas is worse than short sighted. It is signing a death warrant for your children and mine.

There is no reason that we cannot transition out of fossil fuels. It is not an either or situation that will spell ruin for the economy as countries are showing like Denmark, Germany, China, and South Australia. What we cannot continue to do and live as a species is business as usual.

We are also deeply concerned about how this application by Hilcorp would affect public health and the environment. In particular, we are concerned about the potential of this proposal to impact water resources, to create additional surface disturbance and landscape fragmentation, and to negatively affect to air quality and contribute to climate change. Disregarding the concerns of San Juan and Rio Arriba county citizens by NMOCC concerning the magnitude of Hilcorp's well density change application is not just troubling, it is a sign of a bureaucracy that no longer cares about the people whose lives are effected by its actions.

We therefore deeply oppose this application.

Sincerely,

Richard Welker

Subject: [EXT] Support the Hilcorp Pool rule application

Dear Commissioners,

I'm writing to encourage your approval of Hilcorp's application for an amendment to the 'pool rule'. It is the responsibility of the Oil Conservation Commission to ensure that the resources of our great state are being developed and this change is instrumental to accomplishing that effectively. The change will improve the rule in regards to the well density, location requirements, and administrative exceptions of the special rules for the Blanco-Mesaverde Gas pool, Rio Arriba and San Juan Counties, NM (Case 16403).

Environmental groups have opposed this rule revision based on fictitious claims that Hilcorp is proposing thousands of new wells, that they intend to pollute, and that they are using fresh drinking water to frack. NONE of these things are true.

In fact, this change will create new jobs and revenue streams for the state without requiring new wells to be drilled. All new wells will go through the standard permitting process.

We are asking that you not allow emotional and false claims of these activists to affect your decision. Please disregard the distorted political rhetoric and approve an application that is in the best interest of the state and the development of our plentiful resources.

Sincerely,
Michael Sandoval

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Susan Kutz

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

To: Davidson, Florene, EMNRD <florene.davidson@state.nm.us>
Subject: [EXT] Comment: Do Not Double Fracking Wells

To the NMOCC:

I am writing in strong opposition to doubling fracking wells in San Juan and Rio Arriba Counties.

There have been ongoing alarm bells ringing about the continued use of fossil fuels. Most recently, the UN issued a dire report stating that the global community only has 12 more years to transition to 100% renewable energy. And ocean scientists have warned that the waters are warming faster than anyone thought possible. We are in crisis.

Horizontal fracking is the worst culprit in adding to our current climate crisis. It is irresponsible to approve these additional wells at a time when we should be in extreme drawdown. More wells only bring usher in the inability of the earth's biosystem to sustain life.

All models show that moving to 100% renewable energy will be good for the economy and for the earth. Please open your eyes and acknowledge the truth that is before us. There are only measley short-term returns that will come at the expense of more devastation. A decision to proceed with increased wells is short-sighted, ignorant and greedy.

Say NO to more fracking wells! The world of your grandchildren depends on it.

Florene Davidson,

Commission Clerk Florene Davidson:

The fracking impacts in our beloved homelands are reaching a tipping point of environmental violence. Why are we continuing to put our most precious resources; our water, health and most vulnerable populations at risk for the benefit of oil and gas. I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. I also have concerns of increased seismic activity from drilling given the nuclear materials and hazardous waster storage we are already dealing with in our state. We cannot risk further disturbances to our complex geology. It would be a great injustice if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter. We deserve free, informed, and prior consent for decisions that could endanger our children's future to exist in their ancestral lands.

Thank you for listening and implementing ALL the concerns of the public.

Although we live in Maine, my husband and I have spent several months a year in New Mexico and feel very attached to this state.

The dangers of fracking are so well documented that they don't really need repeating. Please consider the long range "cost" , especially in the protection off New Mexico's precious and limited water supply.

This state is perfect for solar. Why not make that a priority.

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Florene Davidson,

Commission Clerk Florene Davidson:

I strongly oppose Hilcorp's proposal to increase well-density (Case No. 16403). Please deny this request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications. The Oil Conservation Commission does not seem to have provided enough public notice related to the November 19 or September 13 hearings on this matter.

It is obvious that our citizen voices need to be considered before creation of additional serious risks to water resources, additional surface disturbance and landscape fragmentation, all of which negatively affect air quality and contribute to climate change. It is not right nor just that the Oil Conservation Commission disregard the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change. Renewables and not oil and gas are the wave of the future.

Thank you for your consideration of this very important matter.

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Janet Brandt

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

As a resident of New Mexico who often hikes and camps on public lands in San Juan and Rio Arriba counties, I am writing to urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

This proposal is not compatible with the Bureau of Land Management's 2003 Resource Management Plan for the Farmington Field Office. Therefore, this proposal should go through a new process of comprehensive environmental review and public consultation to ensure that any negative impacts to communities, correlative rights, environmental and cultural resources are mitigated.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Please do not dismiss the concerns of the people of these two counties or New Mexicans from across the state. We want these lands protected for ourselves and for future generations.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Kristina Fisher

Florene Davidson,

Commission Clerk Florene Davidson:

I am writing to express my opposition to Hilcorp's proposal to increase well-density Case No. 16403, and request that the New Mexico Oil Conservation Commission (NMOCC) deny the request.

I've seen the results of fracking in Texas and I don't want to see it happen to New Mexico.

Allowing this proposal would put our water supplies at risk, further destroy the land, flora, and fauna. Fracking causes earthquakes and affects our air quality and definitely contributes to climate change. These are major concerns and shouldn't be disregarded so that Hilcorp can increase their profits.

Surely the welfare of the of San Juan and Rio Arriba County citizens should be considered.

In addition, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Please consider the concerns regarding the magnitude of Hilcorp's application for well-density change.

We live in a desert where water is vital. Fracking will destroy our aquifers and the land. I am sick and tired of seeing Big Oil/Gas getting their way at the expense of the environment and the people that live nearby. Enough is enough. Please deny Hilcorp's request.

Thank you for your consideration.

Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Sincerely,

Becky Pierce

Subject: Reject the Hilcorp Energy Drilling Application!

Dear [target:organization],

I urge you to reject application #16403 from Hilcorp Energy to double the well-density of Blanco-Mesaverde gas pool in San Juan and Rio Arriba Counties.

Doubling the density of wells will have devastating effects on air quality, limited water resources, and landscapes in northern New Mexico. Residents and tribal communities living in the area will suffer continued negative effects to their public health with already higher than average rates of asthma among these populations.

Hilcorp has many violations in other states and has purposely misled the public on the impact of this rule change. We know that more wells will be drilled as a result of the proposed rule change.

Do not dismiss the concerns of the people of these two counties or the residents of the State at Large. We do not want increased extraction and burning of fossil fuels to contribute to climate change.

We do not consent to putting our lands, aquifers, air, or public health at risk. You must reject reject application #16403 from Hilcorp Energy to protect our people and environment from irreparable harm.

Subject: [EXT] Re: Case No. 16403

Florene Davidson,

Commission Clerk Florene Davidson:

I oppose double drilling in New Mexico. Hilcorp wants to increase well-density (Case No. 16403) to an alarming degree. This would be a threat to the health of residents in the region and detrimental to the environment, air, water, livestock and wildlife.

The New Mexico Oil Conservation Commission (NMOCC) is a public agency charged with taking into account the public welfare and the concerns of the public. I request that NMOCC deny the request to double the drilling numbers.

Such an intense rate of drilling would pose risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Thank you for your consideration of this important matter.

Subject: [EXT] deny Hilcorp's double drilling request

As a New Mexico resident I am concerned about Hilcorp's request to double the increase of drilling wells and the impact this would have on our air quality, wildlife, and unique landscape. We have unique resources in terms of sun and wind power. We should invest in renewable energy instead. Please deny Hllcorp's request. Thank you.

Florene Davidson,

Commission Clerk Florene Davidson:

I write to express my opposition of Hilcorp's proposal to increase well-density Case No. 16403 and request the New Mexico Oil Conservation Commission (NMOCC) deny the request. As a public agency, NMOCC has both the regulatory authority and the duty to consider public concerns over oil and gas applications.

This proposal would create serious risks to water resources, create additional surface disturbance and landscape fragmentation, negatively affect air quality and contribute to climate change. It would be deeply troubling if the Oil Conservation Commission disregarded the concerns of San Juan and Rio Arriba County citizens concerning the magnitude of Hilcorp's application for well-density change.

Furthermore, the Oil Conservation Commission has not provided enough public notice related to the November 19 or September 13 hearings on this matter.

Dear Ms. Davidson,

I would like to echo the sentiments of the email below. It is high time to stop the despoiling of our public lands, endangering the health of NM citizens and misusing the natural resources of our state for the profit of the oil and gas industry.

Dear Ms. Davidson,

I am writing you to ask the New Mexico Oil Conservation Commission to NOT change State rules to allow the doubling of natural-gas wells in northwest New Mexico. In particular, do not allow Houston-based Hilcorp Energy under application case #16403 to double the number of natural-gas wells allowed in the Blanco-Mesaverde gas pool across San Juan and Rio Arriba counties.

With some of the greatest renewable energy sources in America, New Mexico should be focusing on expanding our revenue base to become a leader in solar and wind energy. In addition, our draw as a tourism destination for nature and sporting enthusiasts abounds. We are better served by supporting investments in these unique opportunities, which keep profits within our State and promote local growth. We cannot continue to spoil the natural beauty and versatility of our enchanted New Mexico.

Sandra Stulberg
