*VI. DATA ON WELLS IN AOR: There are six vertical wells within the one-half mile AOR consisting of four active producers, a P&A and a saltwater disposal well. A tabulation of data on all wells of public record within the AOR is attached as Attachment VI-1. It includes each well's API #, name, operator, status, location, and TVD as well as a short description of the well's completion history. The saltwater disposal well is operated by Parker Energy Support Services, Inc. and is completed within the SWD; San Andres Pool. A detailed wellbore illustration is included as Attachment VI-2.

Additionally, the RM Marshall #1 well (api# 30-025-04627) was drilled to 4005' in the San Andres Formation where reportedly, only sulfur water was produced. It was then plugged back to 3867'. A schematic of this wellbore is included as Attachment VI-3.

VII. OPERATIONAL DATA: The proposed operational data is detailed below.

- (1) PROPOSED AVERAGE & MAXIMUM DAILY RATE: Average Daily Rate ~15,000 bpd/Maximum Daily Rate - Limited by MIP (820 psi) only.
- (2) SYSTEM OPEN/CLOSED: System will be closed.
- (3) PROPOSED AVERAGE & MAXIMUM INJECTION PRESSURE: Average Injection Pressure is expected to be ~400 psi. Maximum Injection Pressure will be 820 psi based on the proposed depth to top perf.
(0.2 psi/foot X 4100' = 820 psi)
- (4) INJECTION FLUID ANALYSIS: Injection fluid will be produced water from Permian Basin wells including Yates, Seven Rivers, Queen, Grayburg, San Andres, Delaware, Blinberry, Drinkard, Tubb, Bone Spring, Wolfcamp, Strawn, Pennsylvanian, and Morrow. Attachment VII-4.1 details water analysis data from the NM Produced Water Quality Database V.2 for many of these zones. Attachment VII-4.2 is a recent analysis of typical produced water that is currently being disposed through Goodnight's pipeline/disposal system in this area.

COMPATABILITY – Parker Energy Support Services Inc. operates another SWD; San Andres disposal well in the same township. A total of 4,618,821 barrels have been disposed through this well with no reported problems.

- (5) DISPOSAL ZONE FORMATION WATER: There are three wells within one mile that have been permitted for the Eunice Monument, Grayburg-San Andres Pool. They include:
 - The EMSU #432 (API # 30-025-24857) – This well was completed to a depth of 4,000' OH to the Grayburg but never penetrated the San Andres. It has since been P&A'd.
 - EMSU #352 (API # 30-025-04625) – This well was completed to a depth of 3930' OH. Geologic data found in the nearby EMSU # 392 (API # 30-025-04632) well file suggest that the San Andres top should be at a depth of 3991'. Therefore, this well never produced from the proposed San Andres injection zone.
 - EMSU # 392 (API # 30-025-04632) – This well was completed to a depth of 3985' OH reportedly, 19' into the San Andres. In 1988 a 4" liner was run to "shut off San Andres water production" from Grayburg Zones 5 & 6. It is unclear whether the San Andres ever produced anything more than water in this well.

Formation water was swabbed during the original completion of the TED 28 SWD 1, analyzed, and results submitted to the OCD. Those results are included as Attachment VII-5.2

*VIII. APPROPRIATE GEOLOGIC DATA: The red beds are the nearest underground source of drinking water above the proposed disposal interval. They bottom at 1307' in the LEONARD STATE #003 well (API# 30-025-35968) that is approximately 1200' south-southwest of the NOLAN RYAN SWD #001.

Attachment VIII-1 is data from a NM State Engineer report that places the nearest freshwater well 317' northeast of the NOLAN RYAN SWD #001 and an additional six wells within one mile. The deepest of the seven is 220'. No underground source of drinking water is below the proposed disposal interval.

Estimated formation tops at the proposed NOLAN RYAN SWD #001 location are as follows:

Rustler Anhydrite ~ 1280'
Salt ~ 1375'
Tansill ~ 2605'
Yates ~ 2805'
Seven Rivers = 3010'
Queen = 3510'
Grayburg = 3790'
San Andres = 3980'
Glorieta = 5270'
Paddock = 5440'
Blaine = 5865'

There is more than 2,700' of vertical separation and 1300' of anhydrite and salt between the bottom of the only likely underground water source (red beds) and the top of the San Andres. Furthermore, the Ogallala is 5-3/4 miles northeast of the TED 28 SWD #001 as detailed in Attachment VIII-2.

Geologic Discussion of Grayburg and Upper San Andres permeability barriers

Reference wells: 30-025-04628 Lot H section 13 and 30-025-23397 Lot I section 24.

At these locations (the Nolan Ryan SWD is between them) the Grayburg is part of the barrier that will prevent water from reaching the hydrocarbon producing zones. The upper Grayburg is tight rock consisting of anhydrite and low porosity dolomite. This interval is 170 feet thick in the 23397 well and over 200 feet thick in the 04628 well.

Below the tight upper Grayburg is an interval with mostly anhydrite with no porosity, and dolomite. This interval is 130 feet thick and has tested salt water at this elevation. The combined 300 feet of thickness will act as part of the permeability barrier.

In addition, the top 100 feet of the San Andres is dominantly anhydrite. This is a very good barrier. The San Andres barrier is 100 feet thick in the 23397 well and over 400 feet thick in the 04628 well. This anhydrite layer at the Nolan Ryan location is expected to be somewhere in between those two thicknesses.

The injection interval 4100 feet to 4700 feet will be porous dolomite ranging from 8% porosity up to 15% with excellent fluid transmissivity properties. The reservoir seal or barrier will have a combined thickness of 400 feet on the south and 700 feet of thickness on the north.

Below the porous interval there is 250 to 400 feet of lower San Andres that is comprised of limestone, low porosity dolomite, and anhydrite. This will also be a good barrier or lower confining bed.

A cross-section detailing geologic data of the confining zones and the San Andres injection zone is included as Attachment VIII-3. It describes lithologic detail, geologic name, thickness, and depth.

RE: Goodnight Midstream, LLC Nolan Ryan SWD well permit

Lot O, Section 13, Township 21S Range 36E
Lea County, New Mexico

Goodnight Midstream conducted a hydrogeologic investigation related to the proposed injection well. The scope of the investigation was to determine if there is any hydrologic connection between the proposed injection interval and any sources of underground drinking water.

Goodnight geologist performed an analysis of subsurface well log data. It is our conclusion that there is no evidence of faulting in the data we evaluated at the depths that are being considered. There are small scale flexures which may or may not be associated with small scale faults. None of these flexures extend above the Wolfcamp unconformity and are not seen in the Leonard intervals.

Goodnight acquired and evaluated 3D seismic covering the lands to the west of the proposed salt water disposal well. This data does not cover the proposed location but it does show the geologic setting in the nearby area. No faults are seen in the Artesia Group, San Andres, Glorieta, or Leonard series.

We see no evidence of faulting that would extend to or form a connection between the injection zone and any underground sources of drinking water.

XIII. PROPER NOTICE: According to the NMOCD FAQ page,

“(i) If the injection interval within the Area of Review has not been assigned Division designated operator(s), then notify the Lessee(s). For areas without operators or Lessee(s), then notify the mineral interest owner(s).”

The operators and lessees within the tracts of the area of review that have been accounted for are detailed on Attachment V-4. No lease information could be found for the E2NE of Section 13-21S-36E. Therefore, a search was performed and all mineral owners of Section 13-21S-36E were included on the Affected Parties List, Attachment XIII-1, along with operators, lessees, and surface owner. A copy of the C-108 and proper notice of application for disposal into the San Andres (4,100'– 4,700') was mailed to these contacts. A copy of a typical letter and certified mail receipts are included as Attachment XIII-2 & XIII-3 as proof of notice.

A legal notice was also published in the Hubb News-Sun. An affidavit of the published notice is included as Attachment XIII-4.

Nolan Ryan SWD No. 1 Well

Ladies & Gentlemen:

This letter is to advise you that Goodnight Midstream Permian, LLC has filed the enclosed application with the New Mexico Oil Conservation Division. A hearing has been requested before a Division Examiner on June 13, 2019 and the status of the hearing can be monitored through the Division's website at <http://www.emnrd.state.nm.us/ocd/>. Division hearings will commence at 8:15 a.m. in Porter Hall at the Oil Conservation Division's Santa Fe Offices located at 1220 South Saint Francis Drive, Santa Fe, New Mexico 87505. This statement must be filed at the Division's Santa Fe office at the above specified address and should include: the names of the parties and their attorneys; a concise statement of the case; the names of all witnesses the party will call to testify at the hearing; the approximate time the party will need to present its case; and identification of any procedural matters that are to be resolved prior to the hearing.

If you have any questions about this matter please contact Thomas Schumacher, MidCon Resource Group, LLC, at (701) 400-9909 or tom@midcongroup.com.

Sincerely,

Adam G. Rankin
