---

Examiners,

At the Feb. 6 hearing in Case No. 21020, the examiners request that Chevron submit an electronic version of the CBL. It is attached for your convenience.

In addition, Examiner McClure asked what the fluid column was during the MITs that were conducted and presented for both wells subject to this application. The answer is that the fluid column consisted of recycled, treated produced water.

Finally, Chevron reviewed and confirmed two issues that came up during questions from Examiner McClure. First, Chevron was unable to identify a CBL in either the OCD well records or company records for the 2H well. Second, the pipe grades and ratings presented at hearing in the well bore diagram exhibits are consistent with and match company records and the wells' construction.

We believe that the submission of the CBL and confirmation of the foregoing information resolves and addresses all of the Division's outstanding issues and requests. We appreciate the Division's attention. Please let us know if the Division has any other questions.

Very best,  
Adam
