Subject: [EXT] Fracking waste water threatens New Mexicans

Dear Committee Members,

I'm writing to express my concerns about fracking wastewater, and request that my comments be added to the record of the Oil Conservation Division meeting.

As a mother, grandmother, and retired NM attorney, I am very concerned about how our decisions today will impact future generations.

I believe we should be very cautious about recycling fracking wastewater because (1) the contaminants in this wastewater could have profound effects on human and environmental health, and (2) water is a scarce and precious resource in New Mexico. NM State regulators would be wise to adopt the precautionary principle, and not proceed hastily along this improvident path urged by the oil & gas industry.

We should be protecting our freshwater resources for future generations.

Sincerely,

Lora A. Lucero
