Case 13589

Re: DCP Midstream Linam Ranch AGI Well and Gas Plant H₂S Contingency Plan, and alarm system

Dear Mr. and Mrs. Smith,

I was not in attendance at the recent hearing in Santa Fe regarding our Linam Ranch gas processing facility, but wanted to ensure that we provided you with a copy of the hydrogen sulfide (H₂S) Contingency Plan for the facility for your review and use. Please find attached a full copy of "dcpMidstream, H₂S Contingency Plan, Linam Ranch Gas Plant and AGI Well site, Hobbs, New Mexico (November 9, 2009)." We expect that you would have received or heard about the document during public meetings on the contingency plan when it was adopted in 2009, but after the recent meeting in Santa Fe we want to ensure that as our neighbor you have a full copy of the document.

As you know, as a precaution we have installed H₂S warning signs and lights at key locations adjacent to and directed towards your property, along with the alarm system associated with the AGI well. As we have proposed before, however, should you want to discuss installing a hard-wired H₂S audible alarm system at the residence or building on your property, at our cost, we certainly are willing to meet with you and discuss the particulars of accomplishing that. Please let us know if you have such an interest. Further, should you be interested in learning about the design and operation of the AGI well or the Linam plant, including the various safety systems, please contact me and we will make arrangements to take you through the facility.

Should you have questions about the attached document, please do not hesitate to call me (432.620.4066) or Mr. Kelly Jamerson (575.397.5539).

Sincerely,

David A. Ledonne
Vice President, Operations
