- The 5000' boundary is not geologic.
- In far southeast part of the Burch Keely Unit, the Paddock is severed by the 5000' boundary.
- Dramatic thickening of the Blinebry to the southeast results in most of the Yeso-Paddock section falling below 5000'.
- Separate development above/below 5000' raises issues of stranded reserves and impairment of correlative rights.
- The full Paddock-Blinebry section cannot be efficiently produced without a joint development agreement.
