Water quality is not and should not be an issue of compromise. The current Pit Rule is now proven to work.

What is also proven is that extractive industries are willing to compromise on potential damage to water quality in favor of profit.

Please do not cave in on this vital issue.

Sincerely,

Larry Glover

Oil Conservation Commissioners

Dear Commissioners,

I urge you to maintain the current New Mexico Pit Rule, which protects our water supply from drilling waste.

For the last four years, New Mexico's Pit Rule has kept drilling waste out of our water supply. I urge you to maintain this effective rule.

I do not think you really need me to remind you of the importance of clean water. Just in case you do, I'll start with the fact that about

5 thousand children a day die from a lack of clean drinking water around the planet. And, then there's the increase of cancers and deaths from endocrine disrupters in polluted waters...deaths of wildlife/livestock as well as human lives. When a culture/society loses its children and its general population, it costs. When much time and money has to go into treatment of illnesses, it costs.

In the long run, unsafe water COSTS A CULTURE (or our state) a whole lot more than doing what is needed to protect a water supply.

Sincerely,

Mary Green

Subject: Keep the Pit Rule Intact!

Ms. Bailey, Mr. Balch, and Mr. Bloom,

Regarding the oil and gas industries' petition to roll back the requirements of the Pit Rule. Prior to the rule's implementation four years ago, New Mexico had at least 400 cases of groundwater contamination from oil and gas development. Since establishing the Pit Rule, there have been zero. The record speaks for itself. Please do not cave-in to industry pressure. Continue to keep a high standard for our state's land and water.

Thank you,

Mike Madden

Cc: Tom Shillinglaw
Subject: Pit Rule

The comment period for the Oil Conservation Commission's proposed dramatic loosening of the state's "pit rule" was extended until today.

I am a retired corporate lawyer; my wife and I moved to Santa Fe two years ago - which had always been our plan due to our long term attraction to Santa Fe and to New Mexico in general. Since I am a fairly new resident of the state, I am not well versed in the state's politics. Personally, I had always voted Republican - until the 2004 election.

I do not know the science which of course should be used by the Commission as the basis for this proposed pit rule change - it is the Commission's job to know this and base their decision on it. When an administrative agency is asked to make a change in a rule like this, typically the parties proposing the change have the burden to show with data (not arm waving) that the existing rule is too burdensome on them. In this case, I don't think that fair minded people could say that the oil and gas industry can meet this burden -- the industry is not at all suffering in general, or specifically in N.M. in whole or in part because of this rule. Again, they have the burden of proof in this regard. I would hazard to say that part of the Commission's deliberations (if not all of it) will be based on the record -- i.e., has there been groundwater contamination under the current rule and had there been contamination under the preceding rule. If the incidence of contamination under the current rule had gone down, then I would imagine that those now proposing to go back to the prior standard (or even a lesser one) would have a stiff burden of proof to justify their request - putting politics aside that is.

A couple of interesting points I can add. I had, several years ago, been in a negotiation in Houston with a large very well known multinational oil and gas related company. I remember during one of the sessions the subject of New Mexico came up and I was surprised at the contempt the company's representatives held the state -- laughingly referring to New Mexico as a "pushover for us". Not to put too fine a point on it, but I hate to live in a state that is so poorly regarded by our friends to the east. The second point is that the company where I worked was based in upstate New York, where "fracking" is a huge issue -- the science there is at best open as to the detrimental effects of fracking on groundwater -- not that fracking and the pit rule are the same issue (to my limited understanding at least), but the issue in both is groundwater contamination -- and how many, many people in western N.Y. and western Pa. simply cannot bring themselves to trust what the oil and gas industry is saying to them about the inherent safety of fracking.

Now I understand that in the last election apparently Gov. Martinez received substantial donations from the oil and gas industry (over \$800,000 from press reports, as I recall). I also understand that after the election she appointed new members to the Oil Conservation Commission. I only ask that the Commission members put aside what I can only imagine to be very intense pressure from the oil and gas industry and make your decision on the basis of what is best for the state's groundwater and not to increase the profits of that industry (which is of course the only thing they want - I think it is laughable to take a position that they care one whit about N.M. groundwater quality). In this regard, having worked all my life for two large American corporations, I think I am qualified to say that I kind of know how they work (and how they don't) -- and I would be very very hesitant to take at face value comments by the oil and gas industry that the current rule is costing the state jobs and that these companies are "going elsewhere". This on the face of it is a ludicrous statement -- I mean, companies

don't "leave" productive assets (though they may sell them to others) and in any event where else are they going to go (to Russia or miles off the Gulf coast ?). These companies have huge resources and are very very wealthy. We have what they want and need and the last thing we should do is to give it to them on their terms. If they want our natural resources (and they most assuredly do) then New Mexico should not continue to be a "pushover" for our friends in Houston. If anything, the state should (i) increase the royalties we get from these companies for taking our oil and gas and (ii) remove any and all payments the state makes back to them (the rationale for these payments I don't understand at all).

So, have the Commission stand up for New Mexico, reject the pressure from the industry and retain the pit rule as it currently is.
