Re: Case No. 13480; Originals of Fax Filing

Dear Ms. Davidson:

Please find attached the Notice of Filing. The originals are being mailed. Please endorse the extra copy and return to our office in the enclosed stamped envelope.

Thank you for your courtesies in this matter.

Sincerely,  
DOMENICI LAW FIRM, P.C.

RULE 711 PERMIT NO. NM-01-019

CASE NO. 13480

NOTICE OF FILING

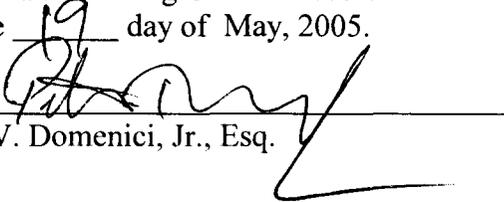

COMES NOW the Applicant, Gandy Marley Inc. (GMI), by and through undersigned counsel of record, and respectfully provides Notice of Filing the attached documents as a comment to the record.

Respectfully Submitted,

Pete V. Domenici, Jr. Esq.  
Attorney for Gandy Marley Inc.  
6100 Seagull Street NE, Suite 205  
Albuquerque, NM 87109

RE: SUBMITTAL OF MONITOR WELL PUMP TEST / FLUID RECOVERY REPORT  
MONITOR WELLS # 1 & 2  
GANDY MARLEY COMMERCIAL LANDFARM  
SW/4 SEC.4, SE/4 SEC.5., NE/4 SEC.8, NW/4 SEC.9  
T.11 S. R. 31 E.  
CHAVES COUNTY, NEW MEXICO

DEAR MR. MARLEY:

CLAYTON M. BARNHILL PG, DBA / CMB ENVIRONMENTAL AND GEOLOGICAL SERVICES,  
INC. ON BEHALF OF THE OWNER / OPERATOR, GANDY MARLEY INC. SUBMITS  
THE ATTACHED MONITOR WELL PUMP TEST / FLUID RECOVERY TEST REPORT FOR THE  
ABOVE MENTIONED SITE.

IF YOU HAVE ANY QUESTIONS ABOUT THE CONTENTS OF THE REPORT, PLEASE DO NOT  
HESITATE TO CALL ME. THANK YOU.

SINCERELY,

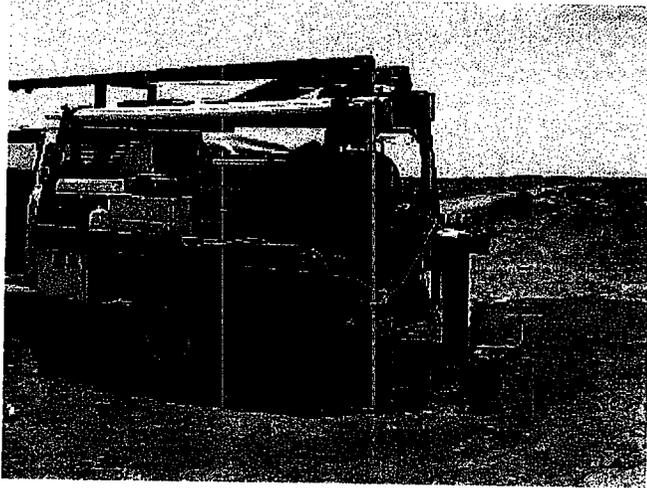

CLAYTON M. BARNHILL, PG  
CMB ENVIRONMENTAL & GEOLOGICAL SERVICES, INC.  
PO Box 2304  
ROSWELL, NEW MEXICO 88202-2304  
(505) 622-2012 PHONE FAX: (505) 625-0538  
CMBENVIRO@DFN.COM

Township 11 South Range 31 E  
Chaves County, New Mexico

**Monitor Well # 1:** N 33°23' 11.7"  
W 103° 50' 20.7"

**Monitor Well # 2:** N 33°23' 05.0"  
W 103° 50' 12.3"

### **Work Performed:**

CMB Environmental and Geological Services, Inc. performed a pump test / fluid recovery test of Monitor Wells # 1 & 2, on 05/12/05, 05/16/05 and 05/17/05 to evaluate the permeability (or hydraulic conductivity) of the confined perched aquifer underlying the Gandy Marley Inc. Landfarm located in Chaves Co., N.M.

In this pump test/ fluid recovery test, the pre-test water levels and total depths of the wells were measured and noted. The same water level reference measuring point (top of casing) was used throughout the testing. A Grundfos Redi-flo2 1.8 inch submersible pump was submersed into the wells to rapidly lower the water levels. The pump was set at total depth in the monitor wells or near total depth, and the wells were pumped at a constant rate until dry. Field water parameters of pH, conductivity, dissolved oxygen, and temperature were measured at various gallon intervals while the wells were being pumped dry. The exact time the pump quit pumping was noted, and the pump quickly removed. Periodic water levels (rising head) were collected with a Solonist water level meter to track the rate of water level recovery. After the pump test, water samples were collected from both wells and sent to Trace Analysis Inc., laboratory located in Lubbock Texas for chemical analysis. The pump was de-contaminated between pump tests by pumping a solution ofalconox soap and water through the pump and rinsing with potable water.

Results of the pump tests / fluid recovery tests are as follows:

On May 12, 2005 a pump test / fluid recovery test of monitor well # 1 was performed by CMB Environmental and Geological Services, inc.

Initial water level monitor well # 1 was 133.72' feet. The total depth of Monitor Well # 1 was 203.40'. At sixty gallons purged from the well the water level in the well was 194.65' and after the 1.8" Grundfos submersible pump was removed the water level was 189.0' and the recovery test was begun.

Fluid recovery rates were recorded every minute for 41 minutes and then at 10-minute increments until 181 minutes of fluid recovery were completed. The initial gallon per minute recovery rate was 0.16 gpm (230 gallons per day) and the final fluid recovery rate was 0.08 gpm (115.20 gallons per day). A significant 50% drop in the fluid recovery rate at the end of the test.

All data was plotted graphically, with time in minutes on the x-axis of the graph and gallons of water recovered in the monitor well on the y-axis of the graphs.

On May 16<sup>th</sup> and 17<sup>th</sup> 2005, similar pump tests / fluid recovery tests were conducted on monitor well # 1.

On May 16<sup>th</sup>, 2005 the initial water level in MW-1 was 130.32' and the pump was removed at 70 gallons purged from the well. Fluid recovery rates were recorded every minute for 17 minutes and then at 10-minute increments until 78 minutes of fluid recovery were completed. The initial gallon per minute fluid recovery rate was 0.098 gpm(141 gallons per day) and the final per minute fluid recovery rate was 0.094 gpm (135.36 gallons per day).

May 17<sup>th</sup> 2005, the initial water level was 131.32' and the pump was removed at 80 gallons purged from the well. Fluid recovery rates were recorded every minute for 20 minutes and then at 10-minute increments until 80 minutes of fluid recovery were completed. The initial gallon per minute fluid recovery rate was 0.1306 gpm(188 gallons per day) and the final per minute fluid recovery rate was 0.1045 gpm (150.48 gallons per day).

On May 16<sup>th</sup>, 2005 the initial water level in MW-2 was 122.62' and the total depth was 180.0'. The pump was removed at 95 gallons purged from the well. Fluid recovery rates were recorded every minute for 47 minutes and then at 10-minute increments until 107 minutes of fluid recovery were completed. The initial gallon per minute fluid recovery rate was 0.4310 gpm(620.64 gallons per day) and the final per minute fluid recovery rate was 0.1471 gpm (211.82 gallons per day). A significant 66 % drop in the fluid recovery rate.

On May 17<sup>th</sup>, 2005 the initial water level in MW-2 was 124.70' and the pump was removed at 80 gallons purged from the well. Fluid recovery rates were recorded every minute for 12 minutes and then at 10-minute increments until 72 minutes of fluid recovery were completed. The initial gallon per minute fluid recovery rate was 0.1306 gpm(188 gallons per day) and the final per minute fluid recovery rate was 0.1515 gpm (218.16 gallons per day)  
All field notes and graphs are attached.

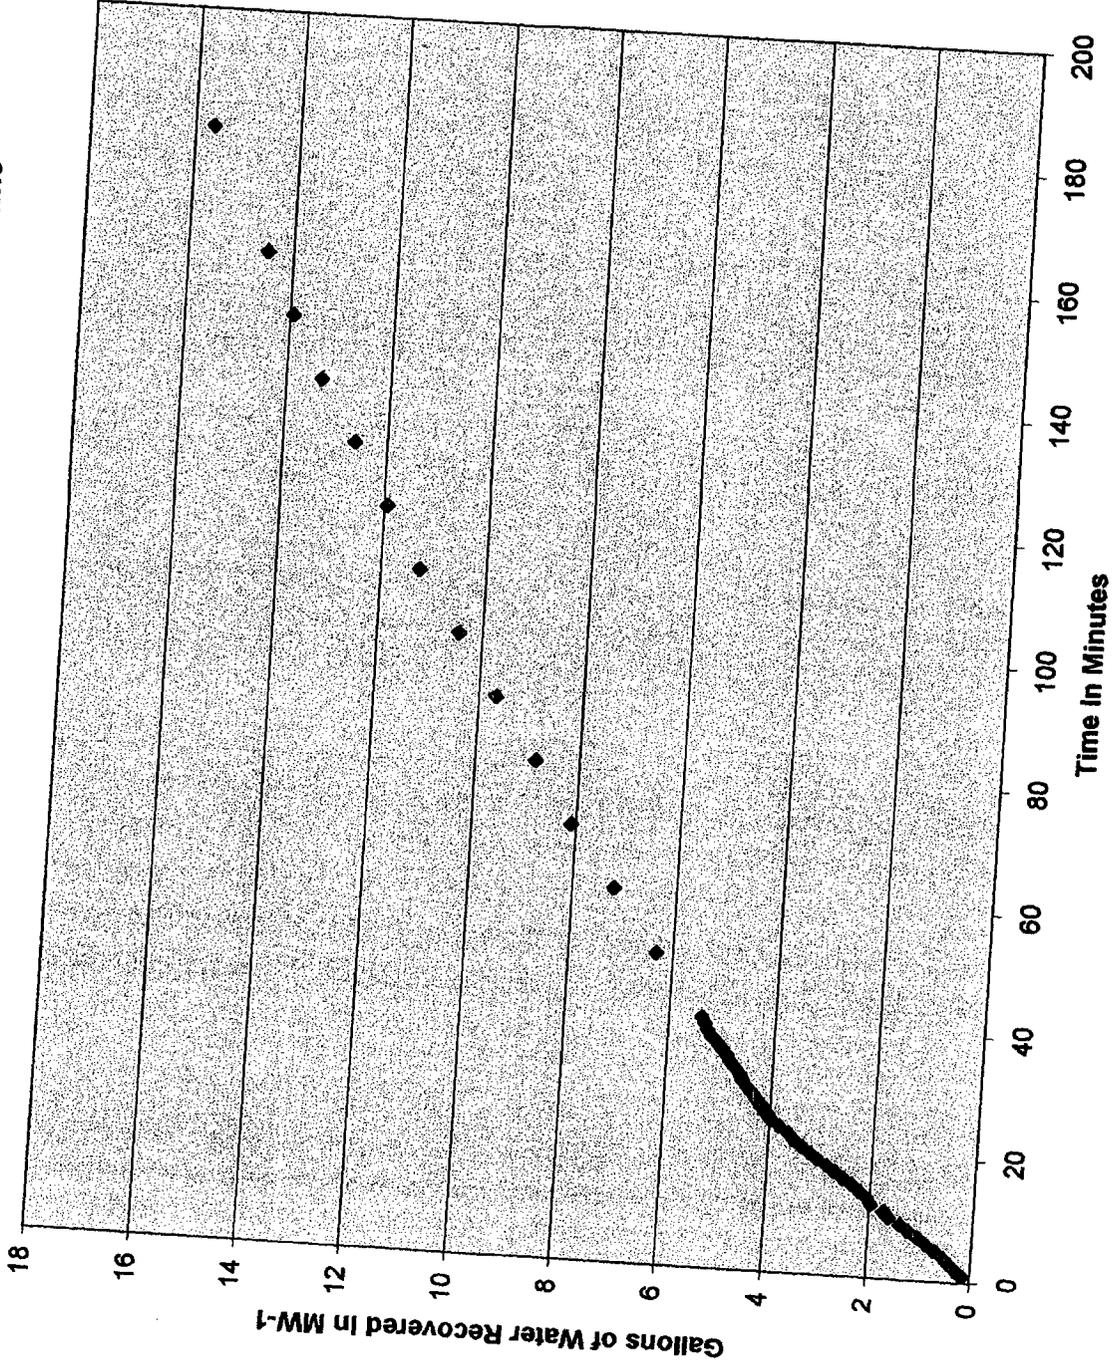

### **Conclusions:**

- The aquifer appears to be poorly transmissive, confined, perched aquifer.
- Fluid recovery rates are slow and the monitor wells take many hours to recover. The wells quickly pump dry. The wells could never sustain domestic, livestock, or commercial usage, but will make excellent monitor wells. MW-1 may produce an estimated sustained rate on the average of 154 gallons per day. MW-2 could possibly produce an estimated sustained rate 206 gallons per day. The wells are properly screened across the water bearing formations.
- Fluid recovery trends in monitor wells were at least 75% of the full recovery of the initial water levels indicating that a good percentage of total fluid recovery was obtained during the test.
- Water quality in the area is poor and not suitable for domestic or livestock use.(See attached Trace Analysis Summary Report)
