RE: Plan of Development: January 1, 2013 through December 31, 2013
West Bravo Dome Carbon Dioxide Gas Unit (WBDGU)
Harding County, New Mexico

Gentlemen:

With respect to the West Bravo Dome Carbon Dioxide Gas Unit (the "Unit") and in accordance with New Mexico Oil Conservation Order Number 7707, Hess Corporation, as Unit operator, hereby submits five (5) copies of the Plan of Development (POD) for January 1, 2013 through December 31, 2013.

Presently, there are seventy-four (74) producing carbon dioxide (CO₂) gas wells in the Unit. First unitized production began in December, 2008.

In 1984, the Unit originally contained 50,020.78 acres consisting of Federal, State and fee tracts. At that time, 20 wells were drilled and shut in due to lack of a market for the CO₂ and related infrastructure to produce the wells. The unit was contracted effective on November 15, 1994 to 34,655.33 acres. By Certificate of Effectiveness dated March 23, 2009, Hess adjusted the total unit acreage to 34,619.11 acres to account for slight errors in the size of tracts 2005 and 2011 and title failure to 38 acres under tract 2045. Effective January 1, 2011, the Unit was enlarged from 34,619 acres to 76,950 acres which is where it remains today. The unit presently contains 122 tracts consisting of 20 Federal tracts (10.28%), 40 State tracts (20.79%) and 62 fee tracts (68.93%).

2012 DEC -4 P 2:58
RECEIVED OGD

In 2012, Hess began field production with an average daily rate of approximately 50 million cubic feet of CO2 gas per day. This year, Hess drilled and completed 20 wells, put one well on production which had been drilled in the 1980's but had been shut-in and drilled and plugged 2 wells as dry holes. Hess also transacted the related infrastructure for this year's program which included building locations, access roads and flow lines to connect to our existing West Bravo Dome Gathering System. Average daily production rate is now 65 million cubic feet of CO2 per day. Also this year, Hess drilled one well which we are applying to convert to a salt water disposal well which, if approved, will become the second water disposal well for the field.

The plan of development for 2013 will include the following:

- There are no plans to drill additional wells in the field this year as we are presently meeting our existing CO2 requirements.
- Make production payments.
- Plan for a possible 2014 drilling program of up to 14 additional wells depending on our company CO2 needs.
- Monitor and maintain existing wells and infrastructure in accordance with State and Federal regulations.

Attached is a spreadsheet showing the existing wells in West Bravo Dome.

If there are questions regarding this proposed Plan of Development for 2013, please contact me at (432) 758-6720.

Yours truly,

HESS CORPORATION

Michael Bast
Manager, Permian Operations
