

# Interference between Wells

- Identified seventy five wells to review for interference effects

## Criteria:

- Within half mile radius (2640 feet) of an existing well
  - 12 months production overlap before the second well produced
  - Existing (first) well having produced at least 0.5 BCF of gas
- No wells meet criteria to review for interference effects in area of interest
  - Interference effects from candidate wells resulted in:
    - 34 wells saw “No” interference
    - 24 wells had “Yes” interference
    - 17 wells inconclusive...redrills, more than two wells within ½ mile radius
  - 41% of wells had “Yes” interference or 24 out of 58 wells

Reliant Exhibit #23
