

# 200-Mil Geonet Leak Detection Layer

- Limits the use of heavy equipment on Secondary Liner
- Hydraulic conductivity is homogeneous and isotropic
- Minimal settling after loading/unloading pit with fluid
- Significantly enhanced Fluid Transmissivity
- Minimal change in Transmissivity with loading or settlement
- 200-mil Geonet will provide superior Transmissivity and will not compact or settle with a resulting decrease of Transmissivity providing a reliable leak detection installation.
