

Results using Method 418.1 and 8015M

- In 2013, composite samples from three pits in Eddy and Lea County were sampled and mixed with soil materials.
- Samples were evaluated for TPH using Method 418.1.
- Samples were evaluated for GRO + DRO + MRO using Method 8015M.
- Results from both methods were compared.
- Method 418.1 consistently overestimated the petroleum hydrocarbons identified by Method 8015M
