

EPA Method 8260B, GS/MS

- This method is used to determine volatile organic compounds in a variety of solid waste matrices. This method is applicable to nearly all types of samples, regardless of water content.
- Method 8260B is a more robust method with greater utility than 8015M, and has the capacity to isolate and identify more than 100 halogenated and nonhalogenated hydrocarbons.
- Temperatures used in this method are below the volatilization temperatures of most DROs.
