APPLICATION OF GOODNIGHT
MIDSTREAM PERMIAN, LLC FOR
APPROVAL OF A SALT WATER DISPOSAL
WELL, LEA COUNTY NEW MEXICO.

CASE NO. 20 555

APPLICATION

Goodnight Midstream Permian, LLC ("Goodnight Midstream"), OGRID No. 372311, through its undersigned attorneys, hereby files this application with the Oil Conservation Division pursuant to the provisions of N.M. Stat. Ann. § 70-2-17, for an order authorizing injection of produced salt water for purposes of disposal. In support, Goodnight Midstream states the following:

1. Attached is a complete Form C-108 application for authorization to inject which contains all the information necessary to authorize the requested approval to inject and filed with the Division for administrative approval on March 8, 2019. *See* C-108, attached as **Exhibit A**, and incorporated herein.

2. Goodnight proposes to drill a new commercial salt water disposal well to be named **Nolan Ryan SWD No. 1 Well** (API No. 30-025-45349), which will be located 779 feet from the south line and 1,995 feet from the east line (Unit O), Section 13, Township 21 South, Range 36 East, NMPM, Lea County, New Mexico.

3. The proposed injection disposal interval will be within the San Andres formation (SWD; San Andres, Pool Code 96121) between 4,100 feet and 4,700 feet below the ground through a perforated completion.

4. Disposal fluid will be produced salt water from oil and gas wells in the area producing from various formations, including the Yates, Seven Rivers, Queen, Grayburg, San Andres, Delaware, Blinberry, Drinkard, Tubb, Bone Spring, Wolfcamp, Strawn, Pennsylvanian, and Morrow.

5. The estimated average injection pressure is expected to be approximately 400 psi. The maximum injection pressure will be 820 psi.

6. The granting of this application will avoid the drilling of unnecessary wells, prevent waste, and protect correlative rights.

7. The administrative application was protested. Accordingly, the Applicant hereby requests that its application be set for hearing pursuant to 19.15.26.8(E) NMAC.

*VI. DATA ON WELLS IN AOR: There are six vertical wells within the one-half mile AOR consisting of four active producers, a P&A and a saltwater disposal well. A tabulation of data on all wells of public record within the AOR is attached as Attachment VI-1. It includes each well's API #, name, operator, status, location, and TVD as well as a short description of the well's completion history. The saltwater disposal well is operated by Parker Energy Support Services, Inc. and is completed within the SWD; San Andres Pool. A detailed wellbore illustration is included as Attachment VI-2.

Additionally, the RM Marshall #1 well (api# 30-025-04627) was drilled to 4005' in the San Andres Formation where reportedly, only sulfur water was produced. It was then plugged back to 3867'. A schematic of this wellbore is included as Attachment VI-3.

This vertical oil well was spudded on 8/31/08. 8-5/8" surface casing was set to 1304' and cemented to 180' with 800 sacks of cement. The casing was "one-inched" with another 38 sacks from 60' to surface. 5-1/2" production casing was then set to 4329' and cemented with 1100 sacks to surface and the well was perforated from 3736-3790' and 3801-4037'. The well was P&A on 10/30/2009 but was re-permitted as a SWD. Plugs were drilled out and the well deepened to 4675' with an open hole into the San Andres and completed on 11/24/2014 as a saltwater disposal well. ** Wellbore schematic attached

VII. OPERATIONAL DATA: The proposed operational data is detailed below.

- (1) PROPOSED AVERAGE & MAXIMUM DAILY RATE: Average Daily Rate ~15,000 bpd/Maximum Daily Rate - Limited by MIP (820 psi) only.
- (2) SYSTEM OPEN/CLOSED: System will be closed.
- (3) PROPOSED AVERAGE & MAXIMUM INJECTION PRESSURE: Average Injection Pressure is expected to be ~400 psi. Maximum Injection Pressure will be 820 psi based on the proposed depth to top perf.
(0.2 psi/foot X 4100' = 820 psi)
- (4) INJECTION FLUID ANALYSIS: Injection fluid will be produced water from Permian Basin wells including Yates, Seven Rivers, Queen, Grayburg, San Andres, Delaware, Blinberry, Drinkard, Tubb, Bone Spring, Wolfcamp, Strawn, Pennsylvanian, and Morrow. Attachment VII-4.1 details water analysis data from the NM Produced Water Quality Database V.2 for many of these zones. Attachment VII-4.2 is a recent analysis of typical produced water that is currently being disposed through Goodnight's pipeline/disposal system in this area.

COMPATABILITY – Parker Energy Support Services Inc. operates another SWD; San Andres disposal well in the same township. A total of 4,618,821 barrels have been disposed through this well with no reported problems.

- (5) DISPOSAL ZONE FORMATION WATER: There are three wells within one mile that have been permitted for the Eunice Monument, Grayburg-San Andres Pool. They include:
 - The EMSU #432 (API # 30-025-24857) – This well was completed to a depth of 4,000' OH to the Grayburg but never penetrated the San Andres. It has since been P&A'd.
 - EMSU #352 (API # 30-025-04625) – This well was completed to a depth of 3930' OH. Geologic data found in the nearby EMSU # 392 (API # 30-025-04632) well file suggest that the San Andres top should be at a depth of 3991'. Therefore, this well never produced from the proposed San Andres injection zone.
 - EMSU # 392 (API # 30-025-04632) – This well was completed to a depth of 3985' OH reportedly, 19' into the San Andres. In 1988 a 4" liner was run to "shut off San Andres water production" from Grayburg Zones 5 & 6. It is unclear whether the San Andres ever produced anything more than water in this well.

Formation water was swabbed during the original completion of the TED 28 SWD 1, analyzed, and results submitted to the OCD. Those results are included as Attachment VII-5.2

*VIII.APPROPRIATE GEOLOGIC DATA: The red beds are the nearest underground source of drinking water above the proposed disposal interval. They bottom at 1307' in the LEONARD STATE #003 well (API# 30-025-35968) that is approximately 1200' south-southwest of the NOLAN RYAN SWD #001.

Attachment VIII-1 is data from a NM State Engineer report that places the nearest freshwater well 317' northeast of the NOLAN RYAN SWD #001 and an additional six wells within one mile. The deepest of the seven is 220'. No underground source of drinking water is below the proposed disposal interval.

Estimated formation tops at the proposed NOLAN RYAN SWD #001 location are as follows:

Rustler Anhydrite ~ 1280'
Salt ~ 1375'
Tansill ~ 2605'
Yates ~ 2805'
Seven Rivers= 3010'
Queen= 3510'
Grayburg = 3790'
San Andres = 3980'
Glorieta = 5270'
Paddock = 5440'
Blaine = 5865'

There is more than 2,700' of vertical separation and 1300' of anhydrite and salt between the bottom of the only likely underground water source (red beds) and the top of the San Andres. Furthermore, the Ogallala is 5-3/4 miles northeast of the TED 28 SWD #001 as detailed in Attachment VIII-2.

Geologic Discussion of Grayburg and Upper San Andres permeability barriers

Reference wells: 30-025-04628 Lot H section 13 and 30-025-23397 Lot I section 24.

At these locations (the Nolan Ryan SWD is between them) the Grayburg is part of the barrier that will prevent water from reaching the hydrocarbon producing zones. The upper Grayburg is tight rock consisting of anhydrite and low porosity dolomite. This interval is 170 feet thick in the 23397 well and over 200 feet thick in the 04628 well.

Below the tight upper Grayburg is an interval with mostly anhydrite with no porosity, and dolomite. This interval is 130 feet thick and has tested salt water at this elevation. The combined 300 feet of thickness will act as part of the permeability barrier.

In addition, the top 100 feet of the San Andres is dominantly anhydrite. This is a very good barrier. The San Andres barrier is 100 feet thick in the 23397 well and over 400 feet thick in the 04628 well. This anhydrite layer at the Nolan Ryan location is expected to be somewhere in between those two thicknesses.

The injection interval 4100 feet to 4700 feet will be porous dolomite ranging from 8% porosity up to 15% with excellent fluid transmissivity properties. The reservoir seal or barrier will have a combined thickness of 400 feet on the south and 700 feet of thickness on the north.

Below the porous interval there is 250 to 400 feet of lower San Andres that is comprised of limestone, low porosity dolomite, and anhydrite. This will also be a good barrier or lower confining bed.

A cross-section detailing geologic data of the confining zones and the San Andres injection zone is included as Attachment VIII-3. It describes lithologic detail, geologic name, thickness, and depth.

RE: Goodnight Midstream, LLC Nolan Ryan SWD well permit

Lot O, Section 13, Township 21S Range 36E
Lea County, New Mexico

Goodnight Midstream conducted a hydrogeologic investigation related to the proposed injection well. The scope of the investigation was to determine if there is any hydrologic connection between the proposed injection interval and any sources of underground drinking water.

Goodnight geologist performed an analysis of subsurface well log data. It is our conclusion that there is no evidence of faulting in the data we evaluated at the depths that are being considered. There are small scale flexures which may or may not be associated with small scale faults. None of these flexures extend above the Wolfcamp unconformity and are not seen in the Leonard intervals.

Goodnight acquired and evaluated 3D seismic covering the lands to the west of the proposed salt water disposal well. This data does not cover the proposed location but it does show the geologic setting in the nearby area. No faults are seen in the Artesia Group, San Andres, Glorieta, or Leonard series.

We see no evidence of faulting that would extend to or form a connection between the injection zone and any underground sources of drinking water.

XIII. PROPER NOTICE: According to the NMOCD FAQ page,

“(i) If the injection interval within the Area of Review has not been assigned Division designated operator(s), then notify the Lessee(s). For areas without operators or Lessee(s), then notify the mineral interest owner(s).”

The operators and lessees within the tracts of the area of review that have been accounted for are detailed on Attachment V-4. No lease information could be found for the E2NE of Section 13-21S-36E. Therefore, a search was performed and all mineral owners of Section 13-21S-36E were included on the Affected Parties List, Attachment XIII-1, along with operators, lessees, and surface owner. A copy of the C-108 and proper notice of application for disposal into the San Andres (4,100'–4,700') was mailed to these contacts. A copy of a typical letter and certified mail receipts are included as Attachment XIII-2 & XIII-3 as proof of notice.

A legal notice was also published in the Hubb News-Sun. An affidavit of the published notice is included as Attachment XIII-4.
