RE: West Loco Hills Grayburg #4 Sand Unit
Amended Unit Agreement
New Operating Agreement

Oil Conservation Division
Case No. 9
Exhibit No.

Sir:

As operator of this unit, EnerVest wishes to increase production by creating smaller waterflood blocks. To do so will require drillings additional injector wells and wells for production, along with additions to the unit infrastructure to support this additional activity.

The current unit agreement dates from the 1960's and needs to be replaced with a modern document which reflects the current regulatory requirements. In New Mexico the state has created its own form which is acceptable to BLM. The enclosed document is that form retaining the current definition of the unit formation, the current acreage, the current tracts and the current tract allocations. Your interest will not change under this amendment. We request you review the enclosed and if you approve, sign the signature pages and return them to us for filing with the various government agencies. When completed, a set of signature pages will be sent to you.

The old operating agreement does not reflect the current ownership of the unit and its requirements can not all be complied with under current ownership percentages. It too needs to be changed to reflect current conditions and make it reasonable to do operations that will increase production. Dollar amounts to trigger AFE's have been raised, settlement limits are raised and percentages to call meeting changed. Please review the enclosed document and if you approve return the signed signature pages to us for processing. A copy of all the signed signature pages will be provided when available.

As we wish to commence operations as quickly as possible and have to schedule rigs etc., we request that you review and return the signature pages as quickly as possible. Once

received, government approval of planned operations must still be obtained. If you have any questions please call me at 713-495-1529.

Sincerely,

R. Dwain Blakley
