**COG Operating, LLC**

**Application for Waterflood in the Yeso pool.**

**Texaco BE State #8**

**API# 30-015-35253**

**Section 16, Township 17S, Range 30E, Unit B**

**330' FNL & 2310' FEL**

**Eddy County, New Mexico**

**APPLICATION FOR AUTHORIZATION TO INJECT**

PURPOSE:  Secondary Recovery  Pressure Maintenance  Disposal  Storage  
Application qualifies for administrative approval?  Yes  No

II. OPERATOR: COG Operating, LLC

ADDRESS: 500 W Texas Ave, Suite 100, Midland, TX 79701

CONTACT PARTY: Kancia Carrillo, Regulatory Analyst PHONE: 432-685-4332

III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.  
Additional sheets may be attached if necessary.

IV. Is this an expansion of an existing project?  Yes  No  
If yes, give the Division order number authorizing the project: \_\_\_\_\_

V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.

VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.

VII. Attach data on the proposed operation, including:  
1. Proposed average and maximum daily rate and volume of fluids to be injected;  
2. Whether the system is open or closed;  
3. Proposed average and maximum injection pressure;  
4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,  
5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).

\*VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.

IX. Describe the proposed stimulation program, if any.

\*X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).

\*XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.

XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.

XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.

XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: Kancia Carrillo 505-476-3440 TITLE: Regulatory Analyst

SIGNATURE:  DATE: 1/05/09

E-MAIL ADDRESS: kcarrillo@conchoresources.com

\* If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal: \_\_\_\_\_

**WELL DATA**

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

**XIV. PROOF OF NOTICE**

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

**NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.**

**NOTICE:** Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

## Justification for Conversion to Injection

### Concho Resources

Continental A State #11 (Sec 30 F, T-17S R-29E), Empire Field  
Continental A State #12 (Sec 30 D, T-17S R-29E), Empire Field  
Mesquite State #15 (Sec 20 L, T-17S R-29E), Empire East Field  
Texaco BE #8 (Sec 16 B, T-17S, R-30E), Loco Hills Field  
Eddy County, New Mexico

The purpose of converting each of these wells is to test the feasibility of secondary recovery operations in the Glorieta/Paddock and Blinebry intervals of the Yeso formation. The information obtained from these conversions may impact the potential recovery of secondary reserves in the Empire, Empire East, and Loco Hills fields in Eddy County, New Mexico. Data such as reservoir preferential permeability trends, injectivities into each interval, injection conformances, sweep efficiencies, and operating pressures may be incorporated into future studies concerning the feasibility of water flooding operations in the area.

Also attached are production plots of each proposed conversion with cumulative production listed from the Paddock interval.

### OOIP & Recoverable Reserves

Original oil in place (OOIP) estimates have been made for each lease based on core and log based volumetric calculations. The local impact or sweep from each proposed conversion is estimated below:

#### Continental A State #11

- Paddock OOIP/acre 42 MBO
- Blinebry OOIP/acre 54 MBO
- Total OOIP/acre 96 MBO
- Estimated impacted area 5 acres
- Estimated recovery 5% of OOIP
- Total estimated oil recovery 24 MBO

Continental A State #12

- Paddock OOIP/acre 42 MBO
- Blinebry OOIP/acre 54 MBO
- Total OOIP/acre 96 MBO
- Estimated impacted area 5 acres
- Estimated recovery 5% of OOIP
- Total estimated oil recovery 24 MBO

Mesquite State #15

- Paddock OOIP/acre 53 MBO
- Blinebry OOIP/acre 58 MBO
- Total OOIP/acre 111 MBO
- Estimated impacted area 5 acres
- Estimated recovery 5% of OOIP
- Total estimated oil recovery 28 MBO

Texaco BE #8

- Paddock OOIP/acre 37 MBO
- Blinebry OOIP/acre 75 MBO
- Total OOIP/acre 112 MBO
- Estimated impacted area 5 acres
- Estimated recovery 5% of OOIP
- Total estimated oil recovery 28 MBO

**Mobility Ratio Data**

Core data is available from several sources in the Empire and Loco Hills fields. Most of the core data includes porosity, permeability, and saturation data from mainly the Paddock interval. The nearest known relative permeability data in the Paddock is from Concho operated Skelly Unit #971 in the Fren Field, Section 14 K, T-17S, R-31E. A plot of Kro & Krw data from six Paddock core samples is attached. The data indicates a mobility ratio ( $K_{rw}/K_{ro}$ ) of 1 is reached at water saturations exceeding 43%. Favorable mobility ratios are expected if the Sw's are less than 43%. No known relative permeability data exists for the Blinebry.

Calculated water saturations are generally less than 40% in the Paddock and Blinebry. It is expected that injection into this interval will sweep oil and not cause a harmful effect on surrounding production.

Successful secondary recovery will prevent waste of New Mexico's natural resources and contribute to local, state, and federal budget incomes.

### **Other Productive Zones**

Productive intervals exist both above and below the Yeso formation. Attached is a tabulation of nearby wells and their completion zones. Below is a summary of shallow and deep wells around the proposed conversion:

#### Texaco BE #8

- Shallow productive horizons include the Seven Rivers-Queen-Grayburg-San Andres (1,500'-4,000').

### **Reservoir Bottom Hole Pressure Data**

In December, 2009, each well was shut in for 24 hours and the fluid level was shot with a sonic gun. Shut in bottom hole pressure data is attached and summarized below:

#### Continental A State #11

- 24 Hr SIBHP=273 PSIG

#### Continental A State #12

- 24 Hr SIBHP=498 PSIG

#### Mesquite State #15

- 24 Hr SIBHP=601 PSIG

#### Texaco BE #8

- 24 Hr SIBHP=388 PSIG

### **Maximum Permitted Injection Pressure**

Concho is asking for a maximum injection permit higher than the normal 0.2 PSI/Ft gradient because the Blinebry is usually tighter than the Paddock. Very little history of injection exists in the Blinebry. A well chronology listing the acid and frac treatments for the completion is attached. For the Texaco B #8, the 15 min after frac ISIP varied from 1,480 PSIG in the Upper Blinebry to 1,597 PSIG in the Lower Blinebry. The 15 min after frac ISIP in the Paddock was 1,353 PSIG.

## **Notifications**

In addition to publication in the Artesia Daily Press, notifications were sent to the following:

- Offset Operators—Cimarex
- WIO in COG's offsetting tracts—Chevron
- Leasehold—BLM and State Land Office

Tubing Size: 2-7/8" Lining Material: IPC

Type of Packer: Tandem Packers with Flow Regulators

Packer Setting Depth: 4267' & 4822'

Other Type of Tubing/Casing Seal (if applicable): N/A

Additional Data

1 Is this a new well drilled for injection? Yes  No

If no, for what purpose was the well originally drilled? Producing oil well.

2. Name of the Injection Formation: Paddock 4367' - 4681', Blinebry 4922' - 5721'

3. Name of Field or Pool (if applicable): Loco Hills; Glorieta, Yeso, 96718

4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail, i.e. sacks of cement or plug(s) used. No

5. Give the name and depths of any oil or gas zones underlying or overlying the proposed injection zone in this area: 7 Rivers, Queen, Grayburg-San Andres 1500'-4000'

**Exhibit VIII**  
**Geological Review**  
**Ground Water Sources**  
**Empire, Empire East, and Loco Hills Fields**  
**Eddy County, New Mexico**

The intervals under consideration for secondary recovery operations include the Glorieta/Paddock and Blinebry formations collectively referred to as the Yeso. Both intervals are in the Leonardian Group of the Lower Permian Age located on the Northwest Shelf of the Delaware Basin in the western part of the Permian Basin.

The injection intervals are the following:

Continental A #11 (Empire Field)

- Paddock 3,926'-4,277'
- Blinebry 4,436'-5,088'

Continental A #12 (Empire Field)

- Paddock 3,811'-4,044'
- Blinebry 4,300'-5,293'

Houma St #4 (Loco Hills Field)

- Paddock 4,338'-4,647'
- Blinebry 4,880'-5,740'

Mesquite St #15 (Empire East Field)

- Paddock 3,874'-4,215'
- Blinebry 4,336'-5,289'

Produced water from Lower Permian Age rocks is too mineralized to be potable or useable for live stock.

Ground water in Eddy County is obtained from porous and permeable aquifers in consolidated rocks of the Upper Permian and Triassic age and in relatively unconsolidated sediments of Tertiary and Quaternary age.

The area east of the Pecos River is a large area and includes half of Eddy County, generally from T 16 S R 27 E to T 26 S R 31 E, extending from the Chaves County line south to the Texas State line and east to the Lea County line.

The Triassic System overlies the Rustler formation in Eddy County and is composed of red beds and sandstones of the Dockum group. The lower part of these beds is considered Permian and correlated with Dewey Lake red beds by some geologists. The total thickness of the Dockum group east of Artesia is about 1,000'. Formations of the Dockum group exposed in Eddy County are the Pierce Canyon red beds, the Santa Rosa sandstone and red beds possibly from the Chinle formation.

In the Empire, Empire East, Loco Hills, and Fren Fields, the sandstone beds in the Triassic Dockum group and possibly in the Dewey Lake red beds are the chief sources of ground water. The depth to water in this area is generally less than 300'. Most of the wells in the outcrop area of the Dockum group yield water of better quality than the wells to the west that produce from the Rustler formation. Analyses were made of 21 samples of water from wells probably taking all or part of their water from the Triassic red beds. The hardness of calcium carbonate in the 21 samples ranged from 201 to 3,590 ppm and was more than 1,000 ppm in 14 of the 21 samples. The chloride content ranged from 17 to 785 ppm and was more than 200 ppm in 10 of the samples. Probably about half the wells in the Triassic red beds produce water that is considered usable for domestic purposes. None of the wells in the Triassic red beds produce water too highly mineralized for stock.

A review of all geologic map data and well as visual searches by field personnel did not indicate the presence of any windmills in the areas of review for the proposed conversions.

In summary, ground water in the Empire, Empire East, Loco Hills, and Fren areas for stock and domestic use can be obtained from wells in the Triassic red beds at depths up to 300'. Water is generally of fair quality but locally impotable. The injection intervals for the proposed conversions are in the Yeso group in the lower Permian age rocks at about 3,800' to almost 5,300'. No contamination of the known shallow potable ground waters is expected from the proposed deeper secondary operations due to over 3,500' of vertical separation between the them. There was no indication of any use of ground water aquifers in the areas of reviews for the proposed conversions.

## COG Operating Procedure

Texaco BE #8

Loco Hills Field

Eddy County, NM

TWP: 17 S – Range: 30 E – Sec . 16

**Additional Well info listed below procedure:**

**Objective:** Convert the well from a Paddock and Blinebry producer to a Paddock and Blinebry water injection well. (Pumping unit will be moved prior to conversion.)

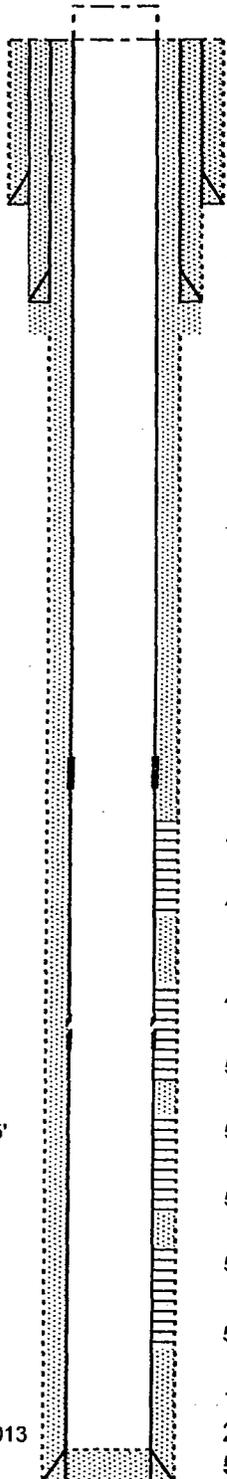

1. MIRU, Tag PBTD, POH w rods, pump, and tbg. (PBTD @ 6013')
2. Run a 4 ¾" bit and 5 ½" csg scraper and clean out to PBTD.
3. TIH w PKR and 2 7/8" tbg and set PKR @ 5476'.
4. Acidize Blinebry perms 5576'-5721' with 1,000 g 15%. Flow back and swab if necessary.
5. TIH w PKR and RBP and set RBP @ 5550' and PKR at 5250'.
6. Acidize Blinebry perms 5310'-5470' with 1,000 g 15%. Flow back and swab if necessary.
7. TIH w PKR and RBP and set RBP @ 5260' and PKR @ 4822'.
8. Acidize the Blinebry perms 4922'-5205' with 1,000 g 15%. Flow back and swab if necessary.
9. TIH w PKR and RBP and set RBP @ 4750' and PKR @ 4267'.
10. Acidize the Paddock perms 4367'-4681' with 1,000 g 15%. Flow back and swab if necessary.
11. TIH with 2 7/8" injection tbg and injection PKR and set PKRS at 4267' & 4822'. Test csg and tbg to 2000 psi. Circulate 65 bbls of PKR fluid between 2 7/8" tbg and 5 ½" csg.
12. Begin injection as permitted on the C108.

COG Operating Procedure  
Texaco BE #8  
API# 30-015-35767  
Sec 16, T17S, R30E, Unit B  
330' FNL & 2310' FEL  
Eddy County, NM

There are no fresh water wells in this area.

**Exhibit XII**  
**Geological Statement**

Concho Resources has examined available geological, seismic, and engineering data and finds no evidence of open faults or any other hydrologic connection between the water flood zone and any underground source of drinking water.

Re: Application for injection well on the:

Texaco BE State #8  
API# 30-015-35253  
Sec 16, T17S, R30E, Unit B  
Loco Hills; Glorieta, Yeso  
Eddy County, New Mexico

To Whom It May Concern:

This letter will serve as notice under Rule 19.15.26.8B that COG Operating LLC has applied for a permit from the Oil Conservation Division in Santa Fe, NM to convert a producing well into a injection well. We will be injecting, for the purpose of secondary recovery, into the Paddock and Blinebry which is consolidated within the Yeso pool. Paddock Perfs are 3873.5 – 4114.5, Blinebry perfs are 4336.5 – 4573.

Should your company have any objection, it must be filed in writing within fifteen (15) days from the date of this notice. If the Oil Conservation Division determines the application complies with the applicable regulations, then it will be approved. The New Mexico Oil Conservation Division address is 1220 South St. Francis Drive, Santa Fe, New Mexico, 87505, the telephone number is 505-476-3440.

Sincerely,

COG Operating LLC

**NOTARY PUBLIC-STATE OF NEW MEXICO**

My commission expires: 6/26/2012

Notary Public, Eddy County, New Mexico

### LEGAL NOTICE

COG Operating, LLC is applying to convert four existing oil wells to water injection wells in Eddy County, New Mexico. The four wells, details, and locations are the following:

Continental - A - State #11, located in the northwest quarter of section 30, T17S, R29E, Unit F, 1450'FNL & 1907'FWL, Empire Field, Yeso oil pool.

Continental - A - State #12, located in the northwest quarter of section 30, T17S, R29E, Unit D, 330'FNL & 583'FWL, Empire Field, Yeso oil pool.

Mesquite State #15, located in the southwest quarter of section 20, T17S, R29E, Unit L, 1750'FSL & 990'FWL, Empire East Field, Yeso oil pool.

Texaco BE #8, located in the northeast quarter of section 16, T17S, R30E, Unit B, 330'FNL & 2,310'FEL, Loco Hills Field, Yeso oil pool.

Water injection will be in the Paddock and Blinebry formations from approximately 3,800' to 5,300' at a maximum rate of 2,000 barrels of water per day and at a maximum surface pressure of 2,000 psig. Average rate and pressure will be 1,000 BWPD at 2,000 PSIG surface pressure.

Interested parties must file objections or requests for hearing with the New Mexico Oil Conservation Division, 1220 South Saint Francis Dr. Santa Fe, NM 87505 within 15 days. Additional information can be obtained by contacting Kanicia Carrillo, COG Operating, 550 W. Texas Ave. Suite 100, Midland, TX 79701. Phone number is 432-685-4332.
