Re: Plan of Development and Operations  
Resaca Operating Co.  
Cooper Jal Unit  
Lea County, NM

Gentlemen:

As operator of the Cooper Jal Unit ("the Unit"), Resaca Operating Co. ("Resaca") hereby submits for approval a Plan of Development and Operations ("POD") for 2011.

## **OPERATIONS SUMMARY**

The Cooper Jal Unit became effective October 1, 1970. The Unitized interval includes the Jalmat and Langlie Mattix pools. Injection commenced in December, 1970. Although separate secondary recovery projects are officially recognized on a pool basis, the Unit is effectively operated as a single waterflood project. Many of the producing wells have been granted authority to downhole commingle production, and are completed in both the Jalmat and Langlie Mattix intervals. Likewise, many of the injection wells inject into both intervals.

As previous operator of the Unit, Texaco Exploration and Production, Inc. ("Texaco") filed the most recent POD on August 20, 2001. SDG Resources, L.P. became operator of the

Plan of Development and Operations  
Resaca Operating Co.  
Cooper Jal Unit  
Lea County, NM  
Page 2

Unit effective January 1, 2002. Torch Energy Services, Inc. ("Torch") succeeded as operator effective May 1, 2006. Resaca became operator of record effective January 1, 2009.

The POD submitted by Texaco in 2001, together with previously filed POD's, reported operations conducted within the Unit through calendar year 2000. During 2001, Texaco plugged and abandoned 12 wells within the Unit, including 7 producers and 5 injectors. During 2007 and 2008, Torch drilled and completed 14 additional producing wells, all but one of which was downhole commingled as to the Jalmat and Langlie Mattix pools, and converted 2 existing wells to injection into both pools.

Water injection rates were increased significantly in early 2009 by Resaca as part of its current reservoir management plan (discussed below). To facilitate increased injection rates, Resaca ran step-rate tests in certain wells within the Unit, and on the basis of these tests, sought and obtained authority to increase injection pressure in 9 injection wells during 2010. In addition, injection authority for the 2 wells previously converted to injection by Torch was sought and obtained, and injection was commenced into these wells.

The attached map delineates the Unit boundaries, and depicts well location, current status, and completion interval for each well within the Unit. The attached table provides the API number, location, lease type (federal vs. private), completion date, completion interval, and current status for each well within the Unit.

A plot of commercial production data for the Unit is attached. Cumulative production from the wells within the Unit (Jalmat and Langlie Mattix pools, as of November 30, 2010) is 16.63 MMBO and 72.33 BCFG. Cumulative injection into wells within the Unit is 171.19 MMBW.

A performance plot constructed from internal data for the Unit from July 2004 to date is also attached. Included thereon are oil production, water production, water injection, gas-oil ratio, and water-oil ratio. The increased injection rates occurring in early 2009 can be readily discerned. In response, oil and water production have increased. Gas-oil ratio has declined, indicating reservoir pressure is increasing. Although the water-oil ratio has risen along with both oil and water production rates, there have been no dramatic instances of water breakthrough in any producing well. In February, 2011, the Unit produced approximately 392 BOPD, 428 MCFD, and 9,498 BWPD, whereas approximately 15,375 BWPD were injected.

## **2011 DEVELOPMENT PLAN**

Resaca is currently formulating plans to perform tertiary recovery operations within the Cooper Jal Unit which will involve injection of CO<sub>2</sub>. Consistent therewith, efforts to increase water injection rates will continue during 2011 for the purpose of increasing reservoir pressure to achieve miscibility of the planned CO<sub>2</sub> injectant. Certain areas of the Unit which were abandoned by previous operators will be redeveloped during 2011. In addition, other miscellaneous modifications to production facilities and numerous workover operations are

Plan of Development and Operations  
Resaca Operating Co.  
Cooper Jal Unit  
Lea County, NM  
Page 3

planned, and regulatory relief may be sought. These development activities are discussed below in more detail.

*Upgrade of Injection Facilities*

Resaca plans to replace one of the two existing injection pumps to increase injection capacity to 25,000 BWPD. The second pump will remain in service as a back-up. In addition, filtration upgrades will be made to capture any oil carryover that may still exist in the injection water after exiting the gun barrel prior to entering the injection tanks.

*Re-Development Activities*

Resaca plans to re-enter 11 wells which were plugged by previous operators. Upon successful re-entry, 7 of these wells will be utilized as injection wells, and 4 of will be producing wells. Injection and commingling authority will be sought and obtained as required. The wells involved are listed below:

Well	Planned Use
Cooper Jal Unit #108	injector
Cooper Jal Unit #109	injector
Cooper Jal Unit #114	injector
Cooper Jal Unit #123	producer
Cooper Jal Unit #124	producer
Cooper Jal Unit #129	producer
Cooper Jal Unit #147	producer
Cooper Jal Unit #148	injector
Cooper Jal Unit #206	injector
Cooper Jal Unit #213	injector
Cooper Jal Unit #230	injector

*Production Facility Modifications*

Compression will be added at the central battery, and a gas gathering line will be laid from the central battery to the existing gas pipeline operated by Targa. A new electrical power line feed will be laid from the existing primary feed at the Cooper Jal Unit #237 location to the Cooper Jal Unit #209, and on to the central battery at the Cooper Jal Unit #245 location for the purpose of achieving a more consistent power supply. The new routing will come directly from the supplier's current substation. Existing vapor recovery units will be rebuilt, and new units will be installed at the central battery. Additional test facilities will be added and control system upgrades will be made at satellite batteries.

Plan of Development and Operations  
Resaca Operating Co.  
Cooper Jal Unit  
Lea County, NM  
Page 4

*Workovers*

Numerous injection well clean-outs, producing well stimulations and artificial lift upgrades are planned. Specific wells to be worked-over have not yet been identified.

*Regulatory*

Resaca may request that the New Mexico Oil Conservation Division schedule a hearing to consider vertical consolidation of the Jalmat and Langlie Mattix Pools. If granted, the need to allocate production to the individual pools and to obtain authority to downhole commingle producing wells will be eliminated.

Please feel free to call the undersigned, or Mr. Bob Porter, Vice-President of Engineering at Resaca at (713) 756-1685, should you have any questions or concerns regarding this Plan of Development and Operations for 2011.

Sincerely,

Keith B. Masters, P.E.  
for Resaca Operating Co.
