NOV - 8 2000

November 6, 2000

Oil Conservation Division
New Mexico Energy, Minerals and Natural Resources Department
2040 South Pacheco Street
Santa Fe, New Mexico 87505

ATTENTION: Mr. Michael E. Stogner

REFERENCE: Five Mile Tank "B" Federal #5
 Snakeweed "B" Federal #4
 Chaves County, New Mexico

Case 12547

Gentlemen:

McKay Oil Corporation requests to be placed on the hearing docket for the Division's December 5, 2000.

The referenced wells are Non-Standard Locations. Justification for each locations is as follows:

1. Five Mile Tank "B" Federal #5 is located on the western edge of a draw and water drainage system for a large portion of the area north and west of the drilling and production location (See attached Topographic Plat). The Non-Standard Location causes the least infringement on the draw and minimizes the amount of erosion around and through the production location.
2. Snakeweed "B" Federal #4 has 2 constraints requiring the location be placed where it has been surveyed. The first constraint is an existing pipeline immediately adjacent to the drilling location (See attached Topographic Plat). The second constraint are 2 different archeological finds immediately west of the location (See attached Archeological Report). These finds are considered significant by the Bureau of Land Management which restricts McKay Oil's ability to move the location to a standard location.

Also enclosed is the notice to be placed on the newspaper giving public notice of McKay Oil's Non-Standard Locations and our application for a hearing before the Division. We have Oil

Conservation Division
November 6, 2000
page 2 of 2

contacted the offset Leasehold Owner, Pecos Slope Partners, L.L.C., Midland, Texas. It is our understanding they have forwarded a letter to the Division stating that they do not contest the location for either of the NSLs.

If any questions or additional information is required, please feel free to contact the undersigned at (505) 623-4735.

Thank you for your immediate attention to this matter.

Very truly yours,

MCKAY OIL CORPORATION

Bill J. Milstead
Vice President - Land and Legal

enclosures

Notice is hereby given that McKay Oil Corporation has applied to the Oil Conservation Division for approval of 2 non-standard locations in Chaves County, New Mexico described as follows:

FIVE MILE TANK "B" FEDERAL #5, located 1760' FSL and 588' FWL, Section 17, T6S, R23E,

and

SNAKEWEED "B" FEDERAL #4, located 880' FSL and 588' FEL, Section 18, T6S, R23E.

A hearing before the Oil Conservation Division is to be held on December 5, 2000, in Santa Fe, New Mexico.

Correspondence concerning to McKay Oil Corporation's applications should be forwarded to the Oil Conservation Division, 2040 South Pacheco Street, Santa Fe, New Mexico 87505.

WELL LOCATION AND ACREAGE DEDICATION PLAT

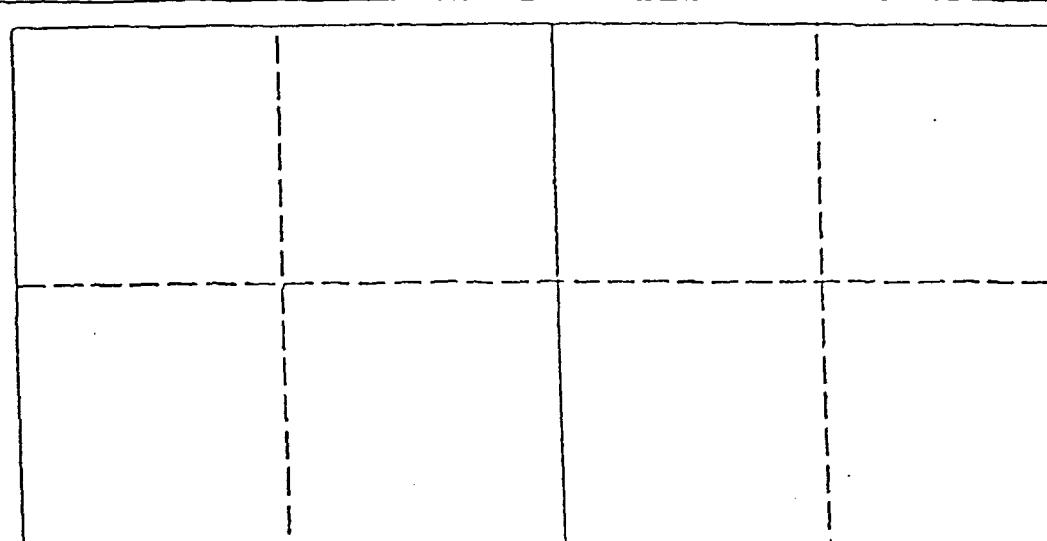

All Distances must be from the outer boundaries of the section

Operator			Lease	Well No.	
Use: Leaser	Section	Township	Range	SNAKEWEED FED "B"	4
P	18	6S	23E	NMFM	CHAVES

Actual Footage Location of Well:

880	feet from the	SOUTH	line and	588	feet from the	EAST	line
Ground level Elev.	Producing Formation		Pool		Dedicated Acreage		Acre

- 4126
- Outline the acreage dedicated to the subject well by colored pencil or texture marks on the plat below.
 - If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).
 - If more than one lease of different ownership is dedicated to the well, have the interest of all owners been consolidated by communitization, unitization, forced-pooling, etc?
- Yes No If answer is "yes" type of consolidation _____
If answer is "no" list the owners and tract descriptions which have actually been consolidated (Use reverse side of this form if necessary).
No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit eliminating such interest has been approved by the Division.

OPERATOR CERTIFICATION

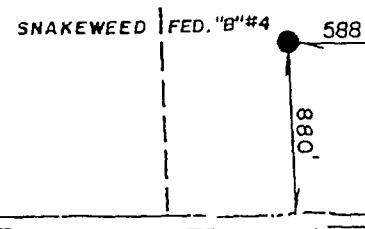

I hereby certify that the information contained herein is true and complete to the best of my knowledge and belief.

Field Recorder: D.M.GRIFFITHS Date: 5/02/88

Form must be accompanied by a photocopy portion of the appropriate U.S.G.S. map, showing Township, Range, scale, & quadrangle name.

Map showing the location of the McKay Oil Corporation Pipeline R/W for the M. & M. Federal Well No. 5. T6S, R23E, Section 19 and Section 18, Chaves County, New Mexico. Square shows location of Well pad; solid line shows location of Pipeline R/W; dots show locations of Isolated Manifestations; large dot and hatched area shows location of Sites ASC88-73-S1 & ASC88-73-S2 respectively. USGS 7.5' series, MESA SW, N.M., 1982. ASC project: 88-73.

FINDINGS: BLM records (as of 5/02/88) indicate the prior recording of LA 2711 in Section 18 (TcS, R23E); the site is some distance to the west, and will not be endangered by installation of the pipeline. Records for Section 18 (TcS, R23E) do not indicate the prior recording of sites; however, a survey (report in progress, Ball 1988) in the NE 1/4 of Section 18 has revealed a limited activity locale. The site is some distance to the north, and will not be endangered by installation of the pipeline.

Archaeological survey of the McWay Oil Corporation pipeline R/W for the N. & N. Federal Well No. 5 revealed the occurrence of 14 isolated Manifestations (all lithic debitage, except for 3 surface fragments), none of which appear significant past the level of field recording. Data on the Isolated Manifestations are within the attached I.A. Forms.

In addition, archaeological survey of the McWay Oil Corporation Pipeline R/W for the N. & N. Federal Well No. 5 revealed the occurrence of 2 (BLM, Category 2) archaeological sites [ASC 88-73-S1 & ASC 88-73-S2], both consisting of limited activity locales (Type 4A & 4C, respectively; Kemmer & Kearns 1984).

The pipeline R/W was re-routed to avoid the two archaeological sites. Further data on the sites occur in the attached ARMS site forms, site maps, and descriptive attribute tables.

RECOMMENDATIONS:

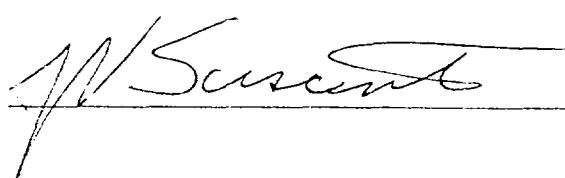

Since the pipeline R/W was re-routed to avoid the two archaeological sites, archaeological CLEARANCE for the McWay Oil Corporation pipeline R/W for the N. & N. Federal Well No. 5 is RECOMMENDED, with the following provisions:

- Wood lath barricades should be installed on either side of the pipeline R/W, in the vicinity of the archaeological sites, to preclude accidental ingress into the site areas by vehicular traffic during the installation of the pipeline.
- The pipeline should be a surface line within the R/W area adjacent to the sites, to avoid the necessity of extra width for back-filling operations subsequent to trenching operations, with the consequent possibility of damage to artifact materials.

Date of Examination: May 2 & May 5, 1988.

D.M. Griffiths.

Principal Investigator:

D.M. Griffiths.

ARCHAEOLOGICAL SURVEY CONSULTANT

CULTURAL RESOURCES EXAMINATION

on lands administered by the
Department of the Interior
Bureau of Land Management
Roswell District, New Mexico

ASC PERMIT NO.: 18-2920-88-C
ASC Job No.: 88-73 [McKey Oil
Corp., pipeline R/W for the
M. & M. Federal Well No. 5]

1. ABSTRACT: intensive archaeological survey of the McKey Oil Corporation pipeline R/W for the M. & M. Federal Well No. 5; a R/W 2760 ft. long x 100 ft. wide, with a total federal land surface of 6.34 acres, was inspected for cultural remains.

Archaeological survey of the McKey Oil Corporation Pipeline R/W for the M. & M. Federal Well No. 5 revealed the occurrence of 14, widely scattered, isolated Manifestations (all lithic debris, except for 3 biface fragments), none of which appear significant past the level of field recording.

In addition, archaeological survey of the McKey Oil Corporation Pipeline R/W for the M. & M. Federal Well No. 5 revealed the occurrence of 2 BLM, Category 2, archaeological sites (ASC 88-73-S1 & ASC 88-73-S2), both consisting of limited activity locales (Type 4A & 4C, respectively; Krenner & Kearns 1984).

The pipeline R/W was re-routed to avoid the two archaeological sites. Therefore, archaeological CLEARANCE for the McKey Oil Corporation Pipeline R/W for the M. & M. Federal Well No. 5 is RECOMMENDED, with the following provisions:

a. wood lath barricades should be installed on either side of the pipeline R/W, in the vicinity of the archaeological sites, to preclude accidental ingress into the site areas by vehicular traffic during the installation of the pipeline.

b. the pipeline should be a surface line within the R/W area adjacent to the sites, to avoid the necessity for extra width for back-filling operations subsequent to trenching operations, or the consequent possibility of damage to artifact materials.

2. LEGAL LOCATION: Twp. R23E, Section 19: SW/4NE/4NE/4; NW/4NE/4NE/4. Section 18: SW/4SE/4SE/4; NE/4SE/4SE/4; SW/4NE/4SE/4. Chaves County, New Mexico.

U.S.G.S. 7.5 minute series, MESA, SW, NEW MEXICO, 1982.

LAND STATUS: Section 18, and the NE/4 of Section 19 (Twp. R23E): BLM, Roswell District/Roswell Resource Area, New Mexico.

3. PROJECT DESCRIPTION: pipeline R/W, 2760 ft. long x 100 ft. wide, with a total federal land surface of 6.34 acres, inspected for cultural remains.

TOPOGRAPHY: situated on the south, southeast, and southwest slope of a south trending ridge, ca. 300 ft. east of the Arroyo del Macho. Small fairly densely vegetated swales (sinks?) occur in the more level part of the ridge traversed by the pipeline in Section 18, especially to the east/southeast of an isolated knoll west of the well in Section 18. Elsewhere, the surface has very a high visibility, with exposure of gypsumiferous soils and gypsum outcrops. The area between the fenceline and the well pad is subject to extensive sheet wash, and there are incipient arroyos along a two-track road south of the fenceline. The terrain has little relief in the vicinity of the pipeline R/W, except for the knoll, noted above. Soils: within an area of Hollomex-moist Milner-Reeves soils. Nearest permanent water: Pecos River, ca. 24 miles east. Other potential water source: Arroyo del Macho, ca. 3000 ft., azimuth of 250 degrees. Elevation: 4089 ft. to 4137 ft. Slope: 0.51 to 4.57 degrees. Strike (aspect): SSW. Lithic Resource Material: does not outcrop in the immediate vicinity.

VEGETATION: Grassland Formation (4), Mixed Grass-Scrub or Scrub-grass scrub dominated community.

4. EXAMINATION PROCEDURE: straight and zig-zag transects, spaced no further than 15 metres apart, with dog-leash transects in the area of Isolated Manifestations, and the sites. The pipeline centreline was pin-flagged by the client. Ca. 29.5 work hours on ground.

VISIBILITY: ground, variable from 65% to 100% in denuded areas; weather, sunny.
