Note:

The discovery of substantial Pictured Cliffs sandstone gas in T. 26 N. - R. 7 W., Rio Arriba County, represents a new gas pool in the Pictured Cliffs ss. Exact extent is not known, but this area will undoubtedly connect up with other Pictured Cliffs producing areas. Possibly Doggie Canyon (Doswell) and Blanco areas. (?????)

Note:
The M. K. L. # 1 gas well is still being cleaned out and is not completed in the final sense of the word. However, this well is unquestionably a commercial gas well in the Mesaverde formation. The only question is the exact amount of gas the well will make on the final gauge.

All wells in Sections 2,3 and 10, T-21S, R-37E, which have been completed
in the Ellenburger formation have been proven oil productive in the Simp-
son formation by drillstem tests taken during the drilling of these wells.
The Continental Hawk B-3 No. 1-S is a little over one mile from the present
northern limit of the Hare Pool. Therefore, it is recommended that the Hare
Pool be extended to include the following acreage which is believed to de-
fine the northern limits of Simpson productive acreage in this area: All
Section 10, SE/4 and SW/4 and Lots 14, 15 and 16 of Section 3, SE/4 and SW/4
and Lots 13, 14, 15 and 16 of Section 2, T-21S, R-37E.
